Lancaster Farming

Serving The Central and Southeastern Pennsylvania Areas

Vol. 21 No. 18 | Lancaster Farming, Saturday, March 20, 1976 | $3.00 Per Year

This spot was once a soggy nuisance in K.D. Linde's pasture. Tired of the sloppy mess, and conscious of the need for water for his cows, the dairyman-farmer-conservationist decided to have the area tiled and concreted. Fresh, clean spring water now flows on a definite path, and the entire area around the spring is dry. The innovation was Linde's own.

Pa. Poultry Federation cites its achievements

A little over two years ago, a small group of Pennsylvania poultrymen with the innocuous title of Planning Committee sat down at a table and did some planning. They envisioned their organization, the Pennsylvania Poultry Federation, becoming one of the most effective and

1976 conservationist named

By DIETER KRIEG

Editor's Note: This is the first of a two-part series on conservation of agricultural resources, as practiced by the Karl Dieter Linde family of Oxford R1. The Lindes were recently named Outstanding Conservation Cooperators for 1976 by the Lancaster County Conservation District.

UNION - "Farming is observation from top to bottom - the same in the field as in the cow stable," Karl Dieter Linde remarked last Monday in reference to his being named the Outstanding Conservation Cooperator for 1976. He and his family received that honor and a handsome color aerial photograph by Grant Heilman to go along with it, at the 25th annual meeting and banquet of the Lancaster County Conservation District, held this past Thursday night in Smoketown.

Linde's remark about "observation from top to bottom" is quite appropriate, even though he himself was too

Steers fed recycled waste

By MELISSA PIPER

LANCASTER — Although northerners like to talk about "yankee ingenuity" a visiting rebel from Georgia sparked a note of interest during a recent educational meeting held at the Farm and Home Center here.

Samuel Hay, a past national director of the Holstein - Friesian Association and presently a successful cattleman visited the county late last week to discuss his method of feeding steers on a ration of solid waste mixed with corn. Hay's talk was in conjunction with a meeting sponsored by the Weaver Star Silo Company.

A salty southerner, Hay began his talk by explaining the woes of rebel farming, "you must remember that down south our soil is very poor," he stated.

Manure management discussed

By JUDY MITCHELL
Berks Co. Reporter

LEESPORT — March 11 was Berks County Dairy Day at the Agricultural Center and close to 100 dairymen took advantage of the educational program offered by the Pennsylvania Cooperative Extension Service. Topics of the day included Livestock Waste Disposal, The Economics of the Dairy Business and the Challenges of Calf Raising.

Considering the revisions for manure and sewage disposal under the Federal Water Pollution Control Act of 1972 that are expected to be announced any day now, the program gave dairymen a timely view of the waste disposal problem and some practical solutions to them.

The "Environmental Approach to Manure Handling" was presented by Gerald Bodman, extension engineer, Penn State University. Mervin R. Ice, State Conservation Engineer, USDA Soil Conservation Service spoke to the group about practical waste disposal structures available depending on individual economic and site factors. On hand was a panel of County dairymen who explained their individual disposal problems and showed slides of the systems they have installed.

Grain exports mostly favored

By JUDY MITCHELL
Berks Co. Reporter

BERKS COUNTY — Ask the average consumer if he thinks the United States should sell grain to Russia and the chances are his answer will be a quick "No." Ask why and he will probably mention the price of bread or the possibility of a shortage of wheat here in our own country. But if the person you are talking to happens to be a farmer, the answer you get may not come quite so easily.

Talking to many area farmers and people connected with the grain industry on the farm end during the past couple of weeks, I realized that the matter of the Russian grain sales is not a simple one. As one feed mill operator I talked to said, "It's not an easy question for the farmer to answer. The ones who sell want to get the best price they can and those who feed want to buy as low as possible." But it is not so easy to draw a line between the opinions of farmers as "buyers" or "sellers" of grain. Some farmers I approached did not want to

An unhappy farmer speaks up

By DIETER KRIEG

DILLSBURG - Milk prices aren't anywhere near high enough as far as Leland Stanford is concerned. He insists that dairymen should be receiving a price equal to 100 per cent of parity, which would mean a Class II support price in the neighborhood of $10.16 per hundredweight based on an average butterfat test. Furthermore, the 37-year old dairyman and outspoken member of the National Farmers Organization claims he's entitled to have a full-time hired man for his farming operation which includes 94 acres of cropland and 45 milking cows. His reasoning, in part, is: "I want nothing less than my fair share - I don't want to work for any less than I should."

Stanford also says he

Labor unions threaten farms

PARK RIDGE, ILL. — Implications of a California Supreme Court ruling giving labor union organizers wide access to farmers' property, "reach well beyond a Sacramento courtroom to the far corners of U.S. agriculture," according to Allan Grant, president of the American Farm Bureau Federation.

Grant, a Visalia, California farmer, and former president of the California Farm Bureau, warned that the precedent set in the narrow 4-3 verdict of the California court could have extremely damaging effects in property rights cases "in every part of this land" - if it is left standing. A direct appeal to the U.S. Supreme Court is pending.

The California case grew out of an executive order by the California Agricultural Labor Relations Board (CALRB) granting union organizers free access to farm properties to confront workers and seek their recruitment. The CALRB access order was then held unconstitutional by a U.S. District Court in Fresno last year. On appeal, however, a U.S. Court of Appeals in San Francisco sent the case back to California state courts as a matter for their primary jurisdiction.

Grant said he saw a bright spot in another court ruling - a recent U.S. Supreme Court

PROGRESSIVE FARMERS WANT PROFESSIONAL CONSULTATION

1. Is pH a false indicator of calcium levels in your soils?
2. Is sulphur holding back the yield, protein content and digestibility of your crops?
3. Is excessive magnesium what makes your land so wet and late?

If your present soil tests don't answer these questions, you will profit by our technical help. SOIL TESTS ARE DIFFERENT! Our complete soil analysis will help you balance soil fertility, which means more efficient cropping and feeding - less bought feed and fertilizer - more yield and profit.

WE SELL NO PRODUCTS — ONLY RECOMMENDATIONS

There is a reason why progressive farmers with sharp pencils hire us year after year for soil analyses and recommendations. We save them dollars. Balance makes crops to be proud of. Now is the time to talk it over with:

New From Pennfield

Cut beef cattle feed costs 10.6%

Earn $960* more profit per hundred head

It's true, Pennfield Feed s new 40% concentrate #726 or silage balancer =746 will assure you equal weight gain with 10.6% less feed. That's the same as feeding every 11th beef cattle in your herd free. It's the same as feeding 39 extra head free when you have 100 acres planted in silage corn. In short, its another Pennfield profit maker for you, the beef cattle farmer.

Here's the story. New 726 or 746 contain a new, FDA approved non-hormonal additive called monensin sodium (monensin). It is a natural product, like yeast or yogurt. And it works in the cattle's stomach to improve his natural rumen digestion and absorption of nutrients and other growth and energy products. Your cattle experience the same rate of growth with 10.6% less feed. And these new Pennfield products are 5% more efficient than similar competitive products, just now being introduced.

Monensin has been thoroughly tested in university and government studies and found both safe and effective.

So, if you want to grow every eleventh beef cattle in your herd free and increase your profit by $960 per hundred head by cutting your feed costs 10% or more, call your Pennfield man right now. Ask him about new =726 and 746.

He wants you to make more money.

THE OLD FARMER'S ALMANAC

MARCH 22-28, 1976

See the school boy, chasing his hat.

Spread manure over these late snows on your garden (the melting snow will carry the goodness of it into the soil) Third quarter of the moon March 22 .. Woodchucks emerge now and begin to mate .. Average length of days for the week, 12 hours, 24 minutes ... Americans now spend $600,000,000 on hot dogs annually Sixty-foot waves delay Queen Mary's U.S arrival March 22, 1959 .. *You will never get ahead trying to get even*

Old Farmer's Riddle: Who were the shortest and tallest Presidents? (Answer below)

Ask the Old Farmer: I am not very superstitious about walking under ladders, black cats crossing my path, knocking on wood, etc But I must say Friday the 13th bothers me Can you tell me how this superstition came about? S A, Albany, N Y

It is supposed to have been Friday when Christ was crucified and plenty of folks think it unlucky to do most anything on that day

Home Hints: A heavy paper strip holds a tiny screw when your fingers can't Punch hole to hold the screw and rip off paper once it's started **Riddle answer:** James Madison was 5'4" short Abraham Lincoln was 6'4" tall

OLD FARMER'S WEATHER FORECASTS

New England: First part of week cold and rainy or freezing rain, some snow in north and mountains; latter part seasonably cold with showers, occasional snow in mountains

Greater New York-New Jersey: Week starts mild with showers, then turning colder, some light snow, partial clearing latter part, storm with heavy rain at week's end

Middle Atlantic Coastal: Rainy all week, light in north, thunderstorms and heavy rain at times in south

Piedmont & Southeast Coastal: Entire week rainy in north, with possibility of tornado; rain scattered in central and south, heavier in west

Florida: Staying clear, warm and sunny throughout week, with temperatures consistently above normal

Upstate N.Y.-Toronto & Montreal: Rainy and warm at first, turning colder with light snow, latter part clear and mild, but rain and snow at week's end

Greater Ohio Valley: Week begins with intermittent rain and snow in south and east, then becoming colder and snowy, latter part sunny and cool, then storm by weekend, with rain and squalls

Deep South: Early week rain in north, rain becomes heavier by week's end, much colder in north

Chicago & Southern Great Lakes: Rainy in central and east at beginning, but generally cold with light snow over region; becoming warmer latter part, then moderate to heavy rain by end of week

Northern Great Lakes: Snowy and cold over entire region most of week, but clearing and milder in east latter part

Central Great Plains: First part of week rainy in central and south, mixed with snow in northeast, then colder; sunny and cold latter part, with flurries in north and showers in south

Texas-Oklahoma: Sunny and warm to start, then cold and cloudy in central and north, showers turn to rain in central and north, cloudy and warm in south end of week

(All Rights Reserved, Yankee, Inc., Dublin, N H 03444)

East Coast Carlot Meats

March 17, 1976

Rehabilitate an old metal wastebasket by enameling it and then cementing wallpaper flower cutouts or decals onto it.

Peoria Cattle

March 18, 1976
Weekly Summary

Cattle Receipts this week: 4600; last week: 5700; year ago: 4200.

Compared with last weeks close, slaughter steers steady to 1.00 lower. Slaughter heifers 1.00-1.50 lower. Cows 1.00-2.00 higher. Bulls firm to 1.00 higher. Receipts about 70 percent slaughter steers, 20 percent slaughter heifers, remainder largely cows. Slaughter steers and heifers lost the early advance due to increased receipts and a lower dressed meat trade. Cattle eligible for Canadian shipment under least pressure.

SLAUGHTER STEERS: Choice and Prime 3-4 1100-1250 lbs. 37.00-37.50, late 36.00-36.50, few loads Monday yield grade 3-5 1250-1365 lbs. 35.00-36.00, load Yield Grade 5 1430 lbs. 33.00; few Wednesday 1415 lbs. 32.00; Choice 2-4 950-1250 lbs. 36.50-38.00, half-load 38.50; late 36.00-37.00, few 35.75; mixed good and choice 2-4 900-1300 lbs. 35.00-36.00; good 2-3 34.00-35.00; couple loads standard and good 2-3 Holsteins Monday 33.00-34.50.

SLAUGHTER HEIFERS: Choice and Prime 3-4 900-1050 lbs. Monday 35.50-36.00; Yield Grade 4-5 900-1100 lbs. 31.00-33.50; Choice including few Prime 2-4 850-1050 lbs. 34.50-35.50, late 33.00-34.00, half-load 34.50; mixed good and choice 2-4 750-1000 lbs. 31.50-33.50; Good 2-3 29.50-31.50.

Livestock market and auction news

Omaha Cattle

March 18

Compared with previous weeks close: Slaughter steers 1.50-1.75 lower and heifers 1.25-1.50 lower. Cows closed 50-1.50 lower and bulls steady.

Four day receipts 17,100 as compared 16,400 previous week and 14,200 year ago. Slaughter steers approximately 42 percent, heifers 38 percent, cows 10 percent and feeders 8 percent, most of these for Friday Auction. Fed cattle prices continued to decline under unrelenting downward pressure of Liberal marketings and lower carcass prices. Current downturn left closing prices at lowest level since early March a year ago.

STEERS: Forepart of week, several loads choice and prime 3-4 1150-1218 lbs. 36.00-36.50. At midweek, five loads same grade 3-4 1170-1218 lbs. 36.00-36.50. At midweek, five loads same grade 3-4 1170-1249 lbs. 35.10-35.25. Several loads choice 2-3, few 4 1075-1175 lbs. 36.00-37.00 for Canadian shipment, good and choice 2-3 1025-1150 lbs. 34.25-35.25. Bulk choice 975-1275 lbs. closed 34.00-35.35, mainly 34.00-35.00, two loads 3-4 1252 lbs with heavy coating of mud 33.00. Mixed good and choice 2-3 950-1225 lbs. 33.50-34.25. Good 2-3 32.00-33.50. Standard and low good 2-3 31.00-32.00.

Average LS-214 detailed quotations for choice 900-1100 lbs. steers this week 35.25. Choice 1100-1300 lbs. 35.00. Average weight all steers this week 1130 lbs as compared 1134 lbs. previous week. Average weight heifers 991 lbs. last week 985 lbs. Heifers: Several loads.

Choice and Prime - 2-4 888-1096 lbs. 35.00-35.15 early. At midweek, two loads choice 2-4 960 lbs. 35.00 for Canadian shipment. Several loads choice and prime 3-4 975-1025 lbs. 34.00 at midweek. Choice 875-1050 lbs. 2-4 closed mainly 33.00-34.00. Mixed good and choice 2-3 800-975 lbs. 32.00-33.00. Good 2-3 30.00-32.00. Standard and good 2-3 28.50-30.00.

COWS: Utility and commerical 2-3 26.00-28.50, few 29.00-29.50. Canner and cutter 20.00-26.50.

BULLS: Yield grade 1-2 1400-2100 lbs. 29.00-35.00, few yield grade 1 36.00-38.00.

FEEDERS: Few loads choice 900-1025 lbs steers 34.50-35.75 during week.

Greencastle

Greencastle, PA
March 15, 1976

EDITORIAL COMMENTS

BY DIETER KRIEG, EDITOR

Oops, I goofed

Looks like an editorial appearing on this page a couple of weeks ago went to press about the way a dairyman goes to do his milking when he forgets to close the valve on the bulk tank.

An unfortunate combination of timing and inadequate explanation on my part may have given readers the impression that I was opposed to the 80 per cent parity level for milk prices. The editorial, entitled "Yes, they are high enough," was in reference to milk prices and was written after President Ford vetoed the 85 per cent parity request. That level of support prices was requested by some farm organizations, but was deemed unnecessary by some others, including this writer. The 80 per cent level, however, coupled with quarterly adjustments, was needed and when it was passed it was regarded as being sufficient.

Unions, keep out!

Many years ago unions in the United States started with what most people would agree were good causes. Over the years, however, they, with apparent consent of the U.S. government have allowed their power to develop into a monstrosity which is now beginning to threaten farms, according to the American Farm Bureau.

The detrimental effects union power could have on the production of food are many, the most obvious of which is that food is perishable and we can't afford to have employees striking when commodities need to be harvested. Cows always need to be milked unless they're dry, and they need to be fed and cared for. Unions will hopefully never be present in the field or barnyard. I doubt that farmers would ever willingly submit to them. But unions don't operate that way. Some leaders within their ranks are as cruel as any criminal ever was and I present the following account by Samuel Kirkland, a Florida backhoe operator, to prove that fact.

The construction worker, on an excavating job for builder Reuben Brown, refused to submit to demands made by Dick Nell, president of Local 675 of the International Union of Operating Engineers - AFL-CIO.

Kirkland describes Local 675's methods of persuasion, as he presented them in a sworn deposition:

"The union steward for the Operating Engineers local, Chuck Moore, stopped me on the way to work and asked me if I was planning on working. I said, 'Yes' . . .

"He said, 'If you do it will cause trouble.' He said there were about 195-200 Operating Engineers there and he would bring them in to stop me working and if I went in there, 'We will cut your hands off and stuff them in your pocket and tote you across Marco Island Bridge . . .'

"They said because I wasn't union, I couldn't operate the machinery on the island . . . On Thursday we went back. They told me not to come back any more. I went back on Thursday anyway and had a deputy (sheriff) with us working under cover . . . We were on the job site and they pulled up and said to me, 'You came back, huh?'

"I told them, 'Yes, I have a right to do a job' . . . They told me to get off the machine. I got off and started running. They said, 'Let's get him.'

"I ran by the deputy, around the machine and when I saw I didn't have a chance, I hit the ground . . .

"They hit my head with a crescent wrench, they poured something in my face" — metal filings in his eyes — "and I lost my vision for a time, they kicked me and beat me and were talking about cutting my hands off. One of them pulled a knife and the deputy fired a shot . . . Then they congregated around him, hit him on the head, beat him up . . ."

After the attack, Nell, president of the local, said, "Well, I guess Reuben (Brown) will sign a union contract with us now . . . If he don't get right, it's going to get pretty wormy for him."

Newspaper columnist, Ralph de Toledano, had the following to say in one of his recent editorials:

"The beating that Samuel Kirkland received at the hands of the con-

THE BIBLE SPEAKS

Internat onal Uniform Sunday School Lessons

BY LAWRENCE W. ALTHOUSE

WHO ARE YOU FOOLING?

Lesson for March 21, 1976

Background Scripture: Matthew 22:15 through 23:39.

Devotional Reading: Matthew 22:34-40.

Upon reading the twenty-third chapter of Matthew, a boy in my confirmation class exclaimed: "Gee, Jesus sure had it in for the scribes and the Pharisees, didn't he?"

When we read the gospel narratives it certainly seems that way: his bitterest words and acts are aimed at the scribes and Pharisees. Yet, some people today find that difficult to understand, for the scribes and Pharisees were, for the most part, the most conscientious and dedicated followers of the Jewish faith. They were dominated by a passion to make that faith relevant to the daily lives of the people.

'Whitewashed tombs'

Why was Jesus so hard on these dedicated religionists? Why did he reserve his strongest language for them?

"Woe to you, scribes and Pharisees, hypocrites! for you are like whitewashed tombs, which outwardly appear beautiful, but within they are full of dead men's bones and all uncleanness. So you also outwardly appear righteous to men, but within you are full of hypocrisy and iniquity" (Matt. 23:27, 28.)

The answer is that, although these people were in truth the most dedicated and fairthful followers of the Jewish faith, they still were not what they pretended to be. It seems that the person who is "good" and pretends to be even better, is not actually as "good" as the person owns up to being what he is. In other words, Jesus expected more of the "good" people. The proof of their being "good" would be their refusal to pretend to be more than they really were.

The measure of your fathers

The scribes and Pharisees dutifully honored and revered the prophets and saints who had been martyred in their time, but this struck Jesus as hypocritical: " . . you are the sons of those who murdered the prophets. Fill up, then, the measure of your fahters" (Matt. 23:31, 32).

Jesus did not mean that they were the biological descendents of these tyrants, but rather that they were their spiritual heirs and offspring. In other words, despite what the Pharisees said about these long-dead martyrs, if they were to come back from the dead and begin to prophesy again as before, the Pharisees would be among the first to oppose and try to destroy them.

The problem, thus, was not just that the scribes and Pharisees were fooling others, but they were first of all fooling themselves. They were "good" people, but they weren't nearly as "good" as they supposed. And because they assumed that they "knew better," Jesus expected more of them than others.

And you? Who are you fooling?

To Cleanup Drug Residues

The withdrawal period on feeds containing various drugs and antibiotics should be recognized by every food producer; these are clearly marked on the container or package. However, after the feed has been withdrawn there still may be some feed residue containing the material; the proper cleanup of the feed trough or bunk is a very important part of complying with the regulations. We feel that most producers follow the instructions for the various feed additives, but often fail to remove the residual feed materials in and around the feeders. This should be throughly done at the start of the withdrawal period. Food and feed quality must be protected at all times.

To Apply Sewage Sludge Carefully

In and about cities and towns there are many opportunities for farmers to utilize sewage sludge from the public disposal plants. This organic waste is useful as a fertilizer and as a soil conditioner when it is applied in the proper amounts. There is some danger of excessive applications on the same land by loading the soil with too much of the heavy metals contained in sludge. We refer to the possibility of toxic amounts of cadmium and copper. I'd suggest that farmers utilizing this type of material to keep in touch with the person in charge of that particular sewage plant and request information about the amount of these elements in the sludge. Tests can be made on the sludge and the soil to keep abreast of the conditions.

To Prepare For Early Plantings

The calendar indicates that planting time is here for some of the early crops and vegetables. Whether or not the weather will cooperate in this respect is yet to be seen. However, we suggest that farmers and gardeners get ready for these early plantings when the soil and air temperatures permit. I'm thinking of plantings of spring oats, early potatoes, alfalfa, and the hardy vegetables such as peas, radishes, lettuce, and onions. All of these can stand some cold weather and will give better yields when planted during the latter part of March. However, we still suggest that the soil be permitted to dry so that it can be easily worked. To "mud in" the plants or seeds is not a very good practice.

To Force Early Pastures

Livestock producers who have some permanent pasture areas can apply fertilizer to part of the field in the next few weeks in order to grow the grass faster; this will enable the livestock to be turned into ths area a week or two earlier than normal. On straight grass pasture 30 to 40 pounds of actual nitrogen per acre will give results. On grass-legume stands a complete fertilizer such as 10-10-10 at the rate of 300 to 400 pounds per acre is suggested. A suggested area of ¼-acre per animal unit is suggested for this treatment.

Farm Calendar

Saturday, Mar. 20

Vineyard pruning sessions at Bob Hummer's on Colebrook Road, east of Landisville, 9 a.m.; and at the S.E. Field Research Lab of Penn State, located 2 miles north of Landisville on Auction Rd., 10:30 a.m.

Monday, Mar. 22

Sheep Producers meeting at the Lancaster Farm and Home Center, 7:30 p.m. Producers from neighboring counties welcome.

Sheep management, third in a series at Penn State's Schuylkill Haven campus, 7:30 p.m.

Conrad Weiser Young Farmers hear talk on "New Chemicals and their Use" at the high school, 7 p.m.

Eastern Milk Producers meeting at the New Holland Fire Hall 7 p.m.

PA Young Farmer's Region II Leadership Conference at the Eastern Lebanon County High School 10:00 A.M.

Tuesday, Mar. 23

Milking School at Penn State in the J. O. Keller Conference Center. Meetings begin today and continue through Thursday. Topics to be discussed include: Anatomy and Development of the Udder, Hormones of Milk Production, Physiology of Milking, How the Milking Machine Works, Vacuum and Milking Systems, Milking Routines, Milking Labor Studies, Equipment Maintenance, Cleaning Principles, Cow Psychology, Mastitis - The Disease. A $10 registration fee is required.

Cedar Crest Young Farmers hold regional volleyball

Poultry Federation

[Continued from Page 1]

prestigious trade associations for poultrymen in the country. As a major poultry state, they wanted to join the ranks of the many notable poultry state trade associations in the South. Their plans were specific with details of expanding activities, broader responsibilities, and equitable representation of the entire industry - from the smallest producer to the largest agri-business firm. All of these plans left only one question, how was it to be financed since membership dues alone do not totally finance any trade association. With some financial reserves to get started, they set their sights on their Annual ($50-a-plate) Fund Raising Banquet as the solution when the reserves were gone.

Two and a half years later, their membership in the association has doubled. But the real Cinderella story is the Annual Fund Raising Banquet. With total sales of 340 tickets in 1974, they set as their first goal 525 tickets for 1975, 25 more than had ever been sold in the Banquet's five year history. When the 1975 Annual Fund Raising Banquet arrived, they exceeded their goal with 545 tickets. For the 1976 Banquet scheduled for April 1, 1976, at the Host Farm in Lancaster, they set a goal of 750 tickets. The Federation office reported with over two weeks to go, they had already passed the 800 mark.

All of this begged the question, how do you manufacture success? What is the secret? We got a lot of answers on this particular success story from Pennsylvania poultrymen. Some answers were as simple as moving the date for the banquet from the uncertain weather of Farm Show week to a spring date, changing the program from speakers to professional entertainment, adding door prizes and inviting well-known Pennsylvanians as special guests. Some answers were more complicated such as the power of the new image of the association and developing a must-attend banquet atmosphere. Finally, some were more practical such as expanding the number of ticket salesmen (55 this year), selecting two key industrymen to Co-Chair the event, Dale M. Weaver and Kenneth Longacre, giving recognition to participants through the association newsletter, and budgeting more money for the banquet. It is certain all of these have equal merit, but the real key here has special significance for all of agriculture - the power of determined people. We need to use that source more often for the protection and benefit of the most important people on this planet, those who provide our life substenance.

Natalie Immel poses by the Broken Bit 4-H display at the Expo held this week at Park City. The club's entry placed first in the display competition. Fourteen clubs in Lancaster County participated in the show.

4-H Expo staged

Fourteen 4-H Clubs throughout Lancaster County participated in the second annual Expo held this week at the Park City Shopping Mall. Members constructed and put up displays in the Watt and Shand area in order to tell the story of 4-H and its many projects and activities.

The Broken Bit Horse and Pony Club took first place honors for their display with the Boots and Saddles 4-H Horse Club coming in second. The Mt. Joy Community Club took third with honorable mention going to the E-Z Riders and the Rough Riders Horse and Pony Club.

One of the most interesting displays was a see-through chicken brooder which attracted the attention of many vicitors. Watching the baby chicks peck through their shell was a very novel sight for city children.

The 4-Hers will be having a petting zoo and bake sale at the Mall on Saturday and will be manning an information booth in hopes of encouraging new members.

Ag-safety Tip

Approximately 10 percent of all fatal accidents caused by contact with overhead power lines occur on the farm.

Grain exports

[Continued from Page 1]

comment on the sales at all, but I began to sense that there may be a kind of sympathy among farmers when it comes to market prices which makes it hard for the farmer buying feed to take a stand against the sales which will obviously benefit so many other farmers. Finally, Richard Hoppes of Windsor Castle put it into words, "As a buyer I want to get grain as cheap as I can, but I can see the point of view of the guy growing it. I believe the grain business right now is about at the break-even point, and if the farmer doesn't do more than break even, he isn't going to be in business very long." This same idea came from Donald Duncan of Robesonia who grows grain to feed his dairy herd as well as to sell, "What the farmer who has to feed must realize is, if the farmer who produces the grain doesn't get paid, he will stop producing it."

Although Duncan's statement confirmed my original idea, that some farmers might not be in favor of the exports, I was not able to find even one who would speak out as directly against them. Listening to County farmers, it appears that the real conflict over the matter exists, not between farmers, but between the farmer and the consumer with his eye on that loaf of bread. Most farmers felt as Duncan did, that the consumer is often misinformed as to the real issue at hand or simply unwilling to see the farmer get his due. As he explains it, "The United States is the largest and best producer of grain in the world—it is what we have to bargain with, and if we don't get a good return to the grain farmer, he will not produce. He has got to get a return above what it costs him."

Pointing out the high operating costs and the gamble the farmer takes on the weather, he believes that the shortage the consumer worries about "will be created by not exporting," because the farmer will just stop growing it. He is definitely in favor of the exports "if kept in hand" so that they do not create a hardship in this country but so that growing grain "is a profitable business for the producer." As to the consumer's concern with the price of bread, he noted that although the amount of wheat in a loaf of bread represents a very small percentage of its costs, with the announcement of a new sales agreement with Russia, "the manufacturers of bread get on the bandwagon and the farmer gets blamed."

A similar concern with the image of the farmer that is created by the soaring bread prices which accompany the Russian sales was expressed by Roy Christman, Hamburg R1. The problem as he sees it is that "there is no understanding between the consumer and the farmer." He feels that the consumer doesn't consider why the price of bread goes up so high when grain is raised a trifle, particularly when the experts tell us that "the cost of wheat is represented by only about two-and-a-half slices of a loaf." He also mentions that consumers do not realize that "the price of bread goes up when grain prices do but it does not come down with grain prices." On the danger of a shortage in this country, he points out that recent reports he has read indicate that the percentage of loss due to the droughts in the Midwest is expected to be small. He favors keeping the grain bins "low but not empty." According to Christman, it is the wildly fluctuating market that hurts the farmer so "if we have the grain and have a market for it, let's sell it, but keep an even keel."

Wilbur Lutz, one member of a family corporation which deals in grain and hogs, says he approved of the original Nixon wheat deal with Russia because "it got the government out of the business of buying grain and that is the best thing that ever happened." But he suggests taking it a step further and favors "letting private interprise store it and sell it." He feels that the agreement that the United States made with Russia for advance notice of how much wheat they want to buy is not only no agreement at all since it allows either side to back out, but that it could actually hurt the farmer's price by creating another surplus if Russia did back out. He feels that the proposed 3.5 million metric ton figure for the upcoming sale would probably be higher if it were not for public reaction to the sales in the past. In his opinion, "when he's campaigning, the politician tells the farmer this and that, but when it comes right down ot it, both political parties operate on a cheap food policy." Also, it is obvious to him that "the consumer wants everything ready to eat and there are a lot of hands touching it before it gets to the consumer. Even when the farmer's prices are dropped, it takes a long time for the consumer to realize it." As an example, he cited the drop in the price of hogs last spring which took four months to begin to show up in the supermarkets' price of pork. As to the question of shortage, Lutz believes that the loss due to recent droughts "will probably be less than predicted." He questions the government's method of crop prediction anyway and wonders why no one ever comes around asking farmers how the crops will be and what he plans to do. It appears to him that it's "more a matter of politics than accuracy. Predictions are already started and farmers haven't even planted yet." On the matter of the embargo last Fall, Lutz explained that "expenses (for the farmer) were at their peak last spring and when they put the embargo on it really hurt the farmer. Exporting is the best thing we can do right now." As for the Russian grain sales specifically, he points out that they are "just a drop in the bucket" compared to the amount of grain the U.S. exports to other nations, but grain exports are important, "they are really the only thing we have to help maintain our balance of trade."

A slightly different point of view concerning grain exports specifically to Russia was expressed by Joe Ruth, Fleetwood R2, who grows most of the feed he needs for his dairy operation. Although he favors exporting grain, he feels that "there are other places in the world where it could be sold." In his opinion, "the government is using the sales for return favors and not for the benefit of the farmer." He would support continued exports "if they're not used for political purposes" at the expense of the farmer.

There may be some difference of opinion among Berks County farmers regarding the U.S. grain deals with Russia, but in measuring the reactions of those I spoke to, I would have to say that the overwhelming majority are in favor of the sales. Many pointed out that grain is important to our country's economy. As one man put it, "grain, soybeans and scrap metal are all we have left to export. We've priced ourselves out of all the other markets." One point nearly everyone commented on was the consumer's reaction to the sales, and there seems to be general agreement among County farmers that the consumer just does not understand the farmer's problem. A reply I got to a question about last Fall's embargo which was in effect — "just another case of union and consumer groups getting together to rip off the farmer again" — may be a little too strong for most farmers to agree with. But I do not think any of them would disagree with Donald Duncan's statement: "I'm sick and tired of the farmer subsidizing the American consumer and the rest of the world."

Labor

[Continued from Page 1]

decision which found that union pickets may not invoke free speech provisions under the Constitution as a right to picket a privately-owned shopping center. The high court ruled that unions must seek other federal statutes for support.

Even though the ruling came in a case not farm-related Grant said he saw its effect as directly applicable to tactics long used by United Farm Worker (UFW) food boycotters who have often claimed free speech provisions for acts of picketing and handbilling on private properties.

CUSTOM FERTILIZER BLENDING
A Southern States Service
Our new bulk blending plant makes it possible for you to get any approved plant food ratio quickly and economically. Fertilizer can be custom blended and spread on your land, usually for less than you'd pay for standard mixed fertilizer. That's because carload lots of the basic fertilizer materials by-pass regular plants. You save on freight and handling costs. And you save even more if you spread it yourself.
Bulk blending is the best deal yet on fertilizer. It will help you hold the line on crop costs while supplying you with fertilizer that's accurately blended. A phone call is all it takes to get top quality plant food for your land. Call us today!

MGS trailer store opens

AKRON — A ribbon cutting ceremony celebrating the grand opening of the MGS Trailer outlet was held here on Tuesday afternoon. Guy Zell, Mayor of Akron, joined with Roland Gehman, president of MGS and Michael Bomberger, the general manager of MGS, for the factory outlet opening.

Other personnel participating in the event were Roger Ream, trailer products manager; Kathryn Hershey, office secretary; Philip Weber, American Bank representative from Reamstown; Peggy Gehman, wife of the president; Judy Royer, officer secretary; Paul C. Herr, wholesale sales representative and Thomas E. Herr, outlet manager.

The outlet which will offer a complete line of utility trailers, motorcycle trailers, covered and generator trailers is located ¼ mile south of the Akron traffic light along Rt. 272.

Fulton Grange meets

Members of the Fulton Grange 66 met recently with Thomas Galbreath, master, presiding.

During the meeting action was taken on several pieces of legislation.

Members were reminded of a Turkey supper to be held Sat., April 3, from 4-8 p.m. Tickets are $3.50 for adults and $1.75 for children and will be available from David Wissler or at the door.

Mrs. Doris Brown presented a talk on trees in American History.

The next meeting will be March 22.

Farm Commentary

[Continued from Page 10]

struction union goons was not particularly unusual. It happens with grim frequency to workers who resist union compulsion.

"But in this case, Kirkland was able to file suit against the IUOE and Local 675 because he had the help of the National Right to Work Legal Defense Foundation (NRTWLDF). When the depositions began piling up, the AFL-CIO union settled out of court for $165,000. Kirkland's employer received $40,000 for damage to his equipment, and the deputy sheriff $30,000 for his injuries.

"The suit and the settlement are of significance because, like another suit in which unions were barred by a federal court from using members' dues for any purpose other than collective bargaining, they explain why Big Labor is trying to put the National Right to Work Legal Defense Foundation out of business.

"Repeatedly, the NRTWLDF has prevented Big Labor from depriving union and non-union workers of their civil rights, so 10 major international unions have gone into court — represented by Joseph Rauh, a Democratic Party stalwart and former head of Americans for Democratic Action — in a case so flimsy that only a legally-confused judge would not have long since thrown it out of court."

This sort of action is not unusual, and while that in itself is shameful, it becomes even more upsetting when politics and words like "democratic" become tied to it. That's some democratic way!

Furthermore, if the AFL-CIO and its satellite affiliations had any decency within their top levels of leadership, they wouldn't condone such violence. They should be out punishing their misguided members and see to it that such incidents never happen again. But they won't, and that is just one reason why farmers should oppose union control of their business and work with utmost vigor.

Janie, the Good News Girl

Winter is almost over
Spring will soon be here
Let me be your 4-leaf clover
Bringing you good news all year!

And here's Larry with some of the good news I'm going to be bringing you this year.

I was so pleased with the response to our open house I wanted to say thank you. I talked to the boss and he has given his OK to go ahead with my **BEST** Sale.

You may think this is a strange name but this Sale is for the **BEST** people in the world (our customers).

This Sale features point checks from **BEST** products. I will give on any new tractor or equipment purchased the following:

PURCHASE	POINTS
Any new tractor	20,000
Any new equipment over 2000.00	10,000
Any new equipment 1000.00 to 2000.00	5,000
Any new equipment under 1000.00	1,000

The following tractors are in stock, ready for imediate delivery:

Model 1000	Model 4100	Model 6600	Model CL20
Model 2000	Model 4600 SU	Model 8600	Model CL30
Model 3600	Model 5600	Model 3400	Model CL40

Some left over 1975 models - Save up to $1100 00 and still receive BEST points

The following equipment is in stock, ready for imediate delivery.

Model 501 mowers	Model 309 corn planters	Model 131 Chisel Plow
Model 515 mowers	Model 532 Baler	Model 142 Plow
Model 503 rake	Model 535 Mower-Conditioner	Model 820 Manure Spreader
Model 513 rake		

Many more too numerous to mention. Sale only good on purchases between March 15 - May 1, 1976.

I hope you will take advantage of my **BEST** Sale and my way of SAYING **THANKS**

Manure

[Continued from Page 1]

manure daily from his free-stall barn and has solved the problem by installing a manure stacker system. The timbersided stacker is designed for 100 cows and is adequately handling manure from his present 80 head. The holding area was built of timber to keep down the cost of the project and because that type of construction was a way of getting around the problem of underground springs on the site which would not allow for a deep foundation. The walls are six feet high, made of three laminated two-by-ten creosoted posts placed six feet apart.

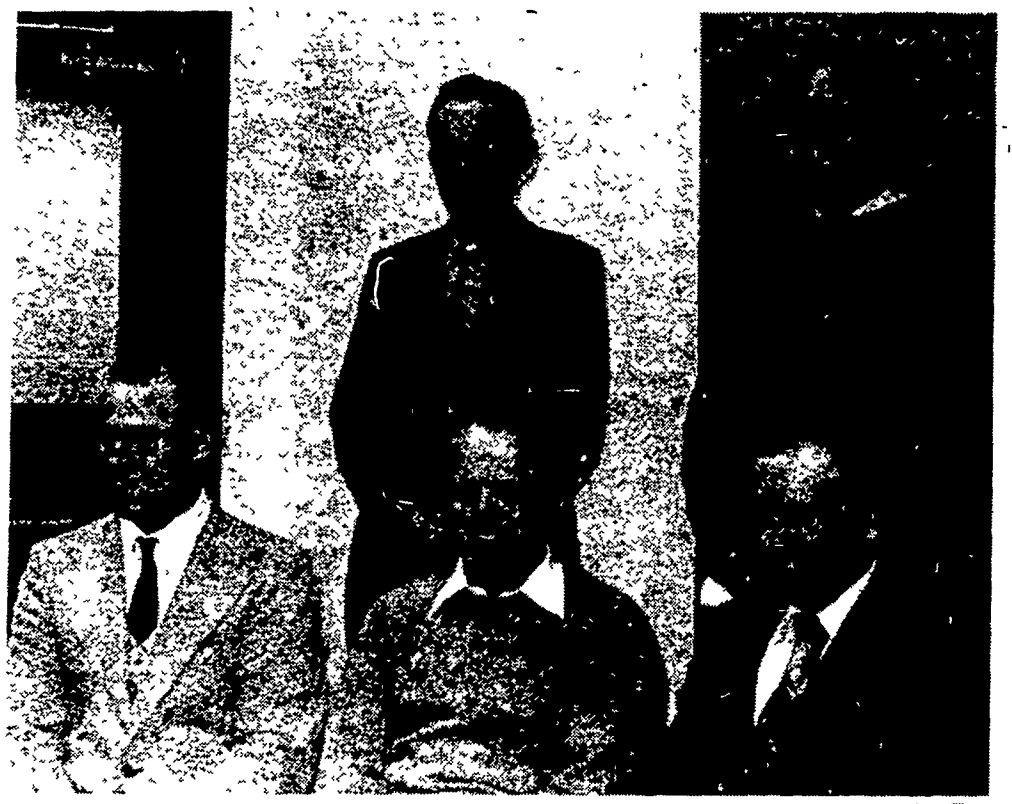
With an accumulation of up to four and a half feet of manure, no movement of the walls or seepage have been detected. The five-foot thick concrete floor and access ramp are reinforced with iron mesh, and the whole pit slopes to a hole to accommodate a Patz liquidator. Duncan mentioned that because of dry crusting due to water evaporation, the liquidator handles only about one-half of the waste accumulated and the rest must be removed by a front end loader. Using two spreaders of 350 and 280-bushel capacity, the area can be emptied of about 100 loads of waste in less than a day and a half. Duncan points out, however, that he does not have to haul the manure for any great distance and if he did, the operation would be costly.

In presenting his feed lot runoff lagoon system, Roy Christman of Hamburg R1 pointed out that the road to satisfactory waste disposal has been a rocky one for him. His problems with waste grew over the years in proportion to the growth of his dairy herd. The runoffs and underground pits which had handled 30 cows proved inadequate, as did the diversion ditch and tile drains he tried later, as his herd increased to 400 head. With three acres under roof and existing farm buildings not ideally located on a hill as he would like them, Christman's major disposal problem has been liquid waste and the lagoon seems to be the answer. The lagoon system has been operating since last Fall, and although the solids which escape the pumping system to collect in the lagoon will have to be pumped out eventually, the only drawback to the system as the dairyman sees it is the weather. The heavy rains falling on frozen ground this past winter caused some overflow, but Christman pointed out that the amount of rainfall this winter was not typical for this area.

A feed lot runoff lagoon system which handles up to 200 head of beef cattle was outlined by Mark Wolfskill of Robesonia who also manages a separate dairy operation. The lagoon, located within a few feet of the barnyard, is a round one about 30 feet in diameter and about four to five feet deep. The solid waste is kept in the barnyard and the liquid waste runs off from the feed lot to the lagoon. Approximately 250 feet of six-inch pipe carries the water from the lagoon to a 600-foot diversion terrace. Wolfskill estimates that only about 10 percent of the solid waste manages to get into the lagoon. Although that amount of solid matter does rise to the surface of the lagoon during the cold winter months, this condition is quickly reversed when the temperature rises and system is working quite well.

According to Robert Manbeck, getting his spray irrigation of milkhouse waste system into operation involved ten months of red tape and delay. He was the first farmer in the area to put in this type of system and any farmer who wants to do so now can benefit from his experience. The main problem was a matter of classification until it was discovered that by installing a length of pipe above ground the system became a portable one and so could be approved for farm use. The irrigation system seemed to be the only answer to the Robesonia dairyman's problem with milkhouse waste which was complicated by the fact that his buildings are located close to the road with no place for runoff. It pumps about five to six hundred gallons of water a day, spraying about two-thirds of an acre, and no signs of erosion have been detected.

[Continued on Page 17]



Panelists who participated at the recent Berks County Dairy Day program were (bottom row from left) Robert Sattazahn, Robert Manbeck, Mark Wolfskill (back row) Roy Christman and Donald Duncan. The producers discussed manure disposal systems.

1976 conservationist named

[Continued from Page 1]

modest to go into detail on that score. Aside from his successful farming and conservation techniques, he and his family (wife, Else; and four children - Karl, Gilbert, Mildred, and Axel) are also the owners of the second-highest producing Guernsey herd in Pennsylvania.

A German immigrant who came to the United States in 1950, Linde had little knowledge of farming prior to coming to this country. He had been a landscape gardener's apprentice, then a soldier, and eventually a prisoner of war in England.

Reviewing the past 25 years, Linde gives most of the credit of his success to Arthur E. Brown, Little Britian, where he was employed until buying his own farm in 1956. He describes Brown as "a very far-sighted man," and adds that it was his former employer who showed him how to farm the rolling hills of southern Lancaster County. The terrain in Linde's native Germany is flat as can be.

At the meeting on Thursday night, Brown himself was recognized for his services and dedication to the Lancaster County Conservation District. He was the founder of the Southern Lancaster County Soil Conservation District 1 and has served conservation causes for nearly 40 years.

Linde, who owns and operates a 143-acre farm just south of here, considers his award extra special because of his not being a native American. He noted that he not only appreciates the award, but the fact that it is possible in America for immigrants to achieve equal status with regular citizens. "I will do my best to keep America beautiful and productive," he remarked.

Conservation practices at the Lindes' "Lindenhof" farm is all-inclusive. Included in his programs which were carefully worked out in consultation with the conservation office, are woodland, cropland, pasture and water management.

"Lindenhof" is more or less shaped like a bowl which is open at one end. Careful management of the soil is imperative nearly everywhere if serious erosion problems are to be avoided.

According to its present owner, the farm did have a few gullies on it when he moved to it 20 years ago. Some places, in fact, had been eroded so badly that a car could have been swallowed up by them.

All that has changed. In recent years he has had no problems with erosion and he considers his present program to be complete. To illustrate how farming practices have changed during the past several decades, when Linde first arrived here the farm had five fields and two pastures. Today there are 13 pasture lots and 25 strips of cropland. Everything considered, it took 20 years to bring it all about. Included in the work were 81 acres of contoured strips, one acre of sod waterways, 2525 feet of diversion terraces, 6265 feet of ordinary cropland terraces, and 1200 feet of parallel terraces. In addition, Linde also had a pond constructed during his second year on the farm and has carefully managed all other water on the farm to enhance the property's appearance and usefulness.

Explaining the construction of the triangular-shaped pond, Linde exphasizes the importance of proper overflow facilities in case of floods. That incorporates more than just an overflow pipe. In case of extremely heavy rainfall, Linde's pond will overflow off to one side and into a holding area where waterflow is slowed down so as to reduce erosion potential. The earthen bank or dam at the lower end of the pond is therefore in no danger of being swept away.

The farm's conservation structures were not yet

[Continued on Page 18]

Manure

[Continued from Page 16]

Robert Sattazahn of Womelsdorf first used a septic tank for disposing of all milking power waste but that meant having the tank pumped out every month. When he heard of the government cost sharing opportunity he decided to try the lagoon system for handling the liquid waste. His system has a concrete slope from the feed lot which carries the surface water to a catch basin that traps any solid matter that has come through. The liquid is then pumped through about 100 feet of six-inch pipe to the lagoon, around which is a diversion ditch. The lagoon has been operating for five years and has never been emptied, there are no flies or odor from the system, and the septic tank which still handles the solid waste is pumped out only once a year.

AGRI-KING
KEY TO PROFIT

WHY SILO—KING WORKS

ARNALDO BURGOS
Assistant Nutritionist and Field Consultant

Silo-King is a roughage preservative that contains a combination of refined enzymes, preservatives, antioxidants and other agents.

The antioxidants stabilize the simple sugars, vitamins and other nutrients. They prevent oxygen trapped in the silage from burning these nutrients which in turn causes the silage to heat and juice. The more severe the heating and-or juicing, the greater the loss of digestible protein, energy and other nutrients.

While the antioxidants are doing their work, the enzymes start breaking down simple (sugars and starches) and complex carbohydrates (fiber) creating a very rich environment for lactic acid producing bacteria to reproduce. This speeds up the silage fermentation process and results in bringing the acidity (PH) of the silage down to a desireable PH or 4 or below quite rapidly.

Because of the rapid action of the enzymes it is possible to create this rich environment for the bacteria. As a matter of fact, that is what enzymes do: accelerate the transformation of carbohydrates to lactic acid. Higher levels of lactic acid also represents a higher concentration of energy in the silage.

Only anaerobic bacteria (live without air) can produce lactic acid fast enough to reduce the PH of the silage in the shortest possible time.

Aerobic bacteria (lives only in the presence of air) utilize oxygen to burn carbohydrates and protein, transforming them into carbon dioxide, ammonia and water. This results in the production of high levels of butyric acid which causes silage to be rancid, have a loud unpleasant smell and be unpalatable. The water released contributes to silo juicing.

Why not add only anaerobic bacteria to the silage instead of enzymes? That would be like buying cows and having no feed for them. They would simply die. Why? Because you are filling the silo with material that has been exposed to air and more air is trapped in the silo at filling time regardless of the type of storage. Therefore, the predominant bug in the silo at first is aerobic bacteria.

Even if you add tons of lactic acid producing bacteria, they cannot work efficiently in the presence of air, so that become inactive until most of the oxygen is used up. By this time most of the damage has already been done with resulting loss of energy, digestible protein and other nutrients. Palatability is also reduced which can severely effect animal performance due to a lower feed intake.

Silo-King antioxidants and preservatives make it very difficult for the undesireable aeorbic bug to find anything to eat, and you know what happens when you don't eat. At the same time enzymes are making food available for the good bug enabling him to reproduce rapidly, speed up the entire fermentation process resulting in the highest quality silage possible.

Only Silo-King contains this secret formula of refined enzymes (not crude enzyme by-products) preservatives and antioxidants.

You wouldn't think of planting corn without using a weed killer. Neither should you think of making silage without using Silo-King.

Conservationist

[Continued from Page 17]

completed when Hurrican Agnes struck in 1972. As a result, more than 100 truckloads of topsoil washed into the pond. The valuable material has long since been removed and re-applied to fields, some of which register a 12 per cent slope. No significant problems have been encountered since conservation practices were fully implemented.

A director of the Octorara Watershed Assn., Linde thinks positively about conservation of resources not only because of their material values in his business, but for beautification. He and his family, for example, have planted dozens of trees, including numerous German "Linden" trees, for decorative and environmental purposes. They're used in pastures for shade and to hold steep banks in place; in woodland to add variety and improve humus, and near the barn as windbreaks. In addition, the family has planted 30 rhododendron bushes around the homestead.

"Farming is fun when you can see how everything progresses favorably," Linde said with a smile as he adjusted the milker underneath one of his top Guernseys.

4-H'er hopes to repeat grand champion victory

By MELISSA PIPER

LITITZ — Just before Christmas last year, Betty Reiff took a short vacation from her studies at Lancaster Mennonite High School to spend one of the most exciting moments of her life at the Lancaster County Beef Round-Up. As many will remember for some time, Betty was the petite young lady who guided her 4-H steer to the grand champion spot in the show. And even though four months have passed since then, Betty's vivacious nature and brown pigtails are still the talk of the county.

This coming spring will mark the young lady's sixth year as a member of the Red Rose Baby Beef and Lamb Club and the 4-Her has already purchased her steer for this year - that's right another Simmental - Hereford cross!

Betty is the third daughter of Mr. and Mrs. Ivan Reiff, Lititz R1, to have shown baby beef steers. Previous to Betty's championship, sisters Marion and Ida also participated in shows. And this year, Betty's young brother will be taking up the trade also.

Betty's noted efforts in the show ring took a lot of work at home and the youth explained that primping her animal wasn't always the easiest task. "Sometimes I just didn't feel like doing all that work," Betty admitted, "but now I realize that you have to put forth effort to really expect to win."

Betty wasn't always at the top of the line with her steers, in fact she spent the first few 4-H seasons near the bottom and middle of the pack, but a sense of good sportsmanship really gave the young lady patience. "When we tell the younger 4-Hers that good sportsmanship is important, it sounds so everyday flat and dull but when you are involved in something like showing you learn the true value of the word."

Along with her busy 4-H schedule, Betty is also an active member of the Hammer Creek Church youth group and spends much of her time helping with service projects.

An avid sports participant, the sophomore enjoys playing hockey and swimming. And when at home, Betty takes time to play the organ and cook.

Betty has another two years in high school and while laden with activities, some of the 4-Her's time will be spent on deciding a career for the future. While no plans are definite, Betty would enjoy a career working in another country. "I'd like to be able to help other people," she explained, "but the next two years may see changes in my plans."

Whatever the young lady decides to do, success will not be far behind, for her warm personable smile assures her readiness to take on any task.

Betty Reiff is preparing for her sixth year in 4-H. The young lady is the daughter of Mr. and Mrs. Ivan Reiff Lititz R2.

Hog embargo modified

HARRISBURG — The Pennsylvania Department of Agriculture modified its embargo against New Jersey, Massachusetts and Rhode Island swine effective March 18, it was announced Wednesday.

After an outbreak of hog cholera in the three states, the Pennsylvania Agriculture Department clamped an embargo on New Jersey swine Feb. 28 and on swine from Massachusetts and Rhode Island March 1.

Dr. Everett E. Denlinger, director of the department's Bureau of Animal Industry, said the modification will permit the movement of swine from nonquarantined counties direct to slaughterhouses without permits.

Slaughter swine from quarantined counties, according to Denlinger, may move to slaughterhouses only if they are accompanied by a federal permit that is valid for 24 hours.

Denlinger said the highly infectious disease that affects only swine has not been detected in Pennsylvania herds. The outbreaks of hog cholera in the three states appear to be under control, which prompted Pennsylvania to modify its embargoes.

Hog cholera was confirmed in five herds in Gloucester County, New Jersey. About 9,000 pigs were destroyed.

Hog cholera was also confirmed in two Massachusetts and one Rhode Island herd. These pigs have also been destroyed.

LIFE on the farm

By DIETER KRIEG

A warm breeze, carrying with it the nearby songs of birds and the distant sounds of children at play and tractors at work, has magical qualities or powers.

This time of year always comes, but somehow it never fails to awe and inspire me. It's something a person just doesn't get tired of or even used to. In a way, it makes me feel brand new all over. I guess we call it "Spring Fever."

It's time to take a walk across the farm to see what winter has done to pastures, fields, and fences. And also to take full advantage of a warm, sunny and wonderful day — the kind that makes one thankful to be a farmer. I remember those days of just a few years ago.

The warm weather had done more than just inspire me — it had stimulated everything else too. The forsythia bushes in the back yard were showing early signs of a renewed life, buds were clearly visible on some trees, and a few weeds were sprouting between rows and rows of last year's corn stubbles. "They'll soon be plowed under," I thought to myself. I was anxious to hop aboard the tractor, turn the soil, see blackbirds trailing the plow in search of worms, and inhale the unique, fresh fragrance of plowed ground.

An old tree stump near the edge of the woods, on a hill which overlooked most of the farm, provided me with the perfect place to sit down and relax. It was a favorite spot during any time of year. Here, awed by the beauty of Nature and miracle of life, a person could forget his problems and sink into a mood of appreciation for blue skies, fluffy clouds, singing robins, and rambunctious calves.

Not even the old fence posts were left out — especially since a couple of them would have to be replaced. I wondered how long ago it might have been since the weather-beaten old posts were "planted" and what life might have been like during that time.

A favorite girl was the subject of a day dream, and before long it was lunch time. I probably would never have noticed it — the beauty of the day was so overwhelming — had it not been for my stomach making its special feelings known.

Poisonous plants listed

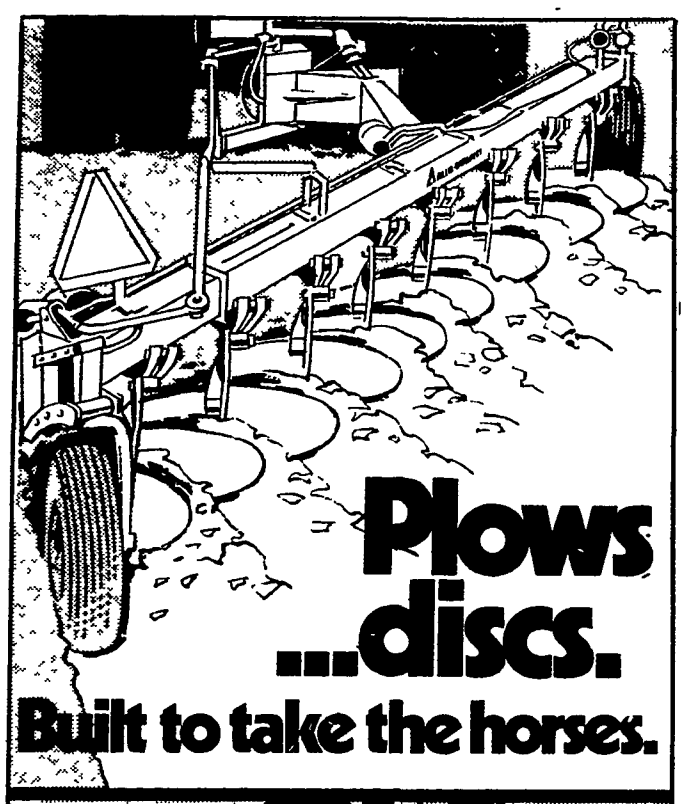
1. caster bean (8 bean deadly), 2. dioffenbachia (dumbcane), 3. horse chestnut, 4. oleander, 5. pokeweed, 6. rhododendron, 7. wisteria, 8. burning bush (leaves poisonous), 9. cyclamen (tuber poisonous), 10. elephart ear, 11. four o'clock (root and seed), 12. foxglove (leaves), 13. Iris (stem underground), 14. Jerusalem cherry, 15. Jimson weed, 16. lily of the valley, 17. milkweed (sap), 18. mock orange (fruit), 19. monkshood (root), 20. mountain laurel, 21. pinks (seed), 22. Scotch broom (seed), 23. spider lily (bulb), 24. tulip (bulbs), 25. larkspur, 26. thorn apple, 27. vetch, 28. autom crocus, 29. amanita (fly mushroom), 30. oleander, 31. posion hemlock, 32. rosery pea, 33. twig grom cherry trees, 34. peach leaves, 35. daffodil (bulb), 36. narcissus (bulb), 37. rhubarb leaves, 38. butter cups, 39. nightshade, 40. Irish potato (green part), 41. wisteria, 42. pimpernel.

Symptoms caused by Eating posinous parts

1. Caster Bean - burning sensation in mouth, nausea, headaches, intense thirst.
2. Horse Chestnut - depression, vomiting and weakness.
3. Itish Potato - mental confussion, clammy skin, vomiting.
4. Mushroom - perspiration, abdominal pains, and muscular twitching.
5. Posion Ivy - inflammation of the skin, blistering, swelling.
6. Pokeweed - intestinal cramps, vomiting, weakness pause.
7. Wisteria - vomiting, abdominal pain, nausea.

Preventions

1. Identify each plant before placing it in the home.
2. Keep posion ones out of children's reach.
3. Supervise children's recreation time.
4. Be aware of the poisonous nature of many ornamental plants.
5. Do not use unknown plants as a source of food.
6. If plant poisoning is suspected, don't rely on home remedies. Call a physician immediately or your nearest poision control center.



To meet today s new speeds, Allis-Chalmers has beefed up the "iron" Developed new, high-strength plow designs Stronger hitches Bottoms We ve added more clearance, too And there s a wide choice of beams, bottoms and coulters to match your soil conditions and farming methods. Ready to buy haying equipment? I'm ready to deal!

Right now, when you need haying equipment most, I'm making some of the best deals you can find. On the best system you can find — the Hesston StakHand System.

Our StakHands and StakMovers have proven themselves in this part of the country. And I'm ready to show you how a StakHand System can add profitability to your haying operation.

Come on in now. I can make the kind of deal you're looking for.

StakHand is a registered trademark of the Hesston Corporation.

First with a better way.

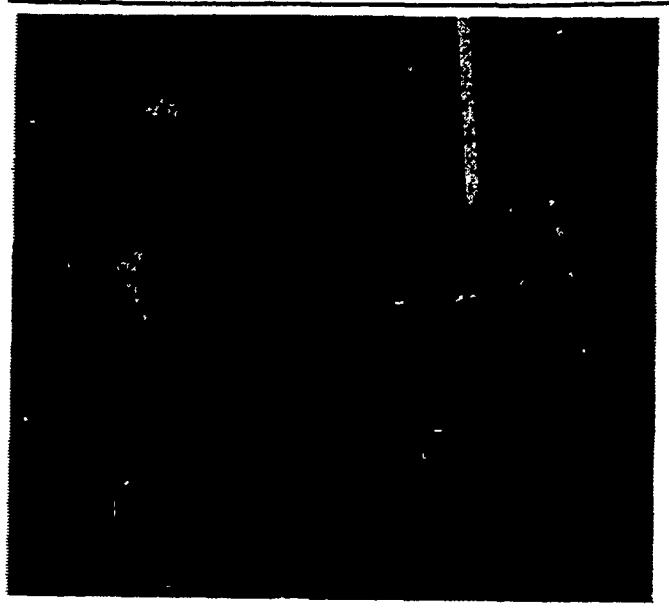
Berks Co. Dairy Day held

Glenn Shirk spoke to the group about the economics of the dairy business with an emphasis on the need today to consider the total operation when setting individual farm goals. His talk covered subjects such as farm utilization, crop selection, stall systems, and the value of labor.

The afternoon program centered on calf raising and Bodman opened the session with a discussion of the challenge of getting the calf from the time it is born and raising it to be a profitable cow. His slide presentation hit on the calf's environment, proper feeding, and careful observation. Before introducing the farm panel, James F. Haldeman, Berks County Agent and coordinator of the Dairy Day program, called attention to the fact that sanitation appears to be one of the main considerations for successful calf raising.

Victor Ziegler of Myerstown showed slides of the calf hutches he installed last spring and called attention to the fact that the 60 individual stalls were simple structures built of four by eight sheets and two-by-fours, much of it scrap lumber. The stalls cost very little to build and have reduced his calf loss to less than five percent. Mathew Degler shared his experience with his two-year-old commercially available environmental unit for housing calves. The unit is a prefabricated one which handles about 22 calves and automatically provides heat or air conditioning as the temperature warrants. The Leesport farmer has lost only one calf in the last 13 months. Barbara Haner outlined the sophisticated calf raising operation at Walmoore Farms in Chester County which includes three calf barns housing 30 calves each in individual stalls. One full-time man and two part-time women tend the calves and careful observation by trained personnel was cited as one of the most important factors of the farm's success. 201 calves were raised last year with a loss of only 11.

Thursday's program ended with an update of the progress of the study for the Comprehensive Water Quality Plan for Berks County by W. Harry Schaffer, Community Resource Development Agent for S.E. Pennsylvania directed towards how Agriculture can influence the final plan.



Speaking on raising calves at the Berks County Dairy Day were (from left) Matthew Degler, Barbara Haner and Victor Zeigler.

GOP rally set for April 13

A GOP political rally for the Lancaster County protion of the 102nd Legislative District will be held Tuesday, April 13 at 8 p.m. at the Lititz Fire Hall on West Main Street.

This district includes all of Warwick School District and Penn Township.

State Representative Nick Moehlmann, who is unopposed in the spring primaries, will be present. All Republican candidates for the 16th Congressional District seat now held by Edwin D. Eshleman have been invited and those present will have a chance to speak and answer questions.

Area Holstein farms visited

By SUSAN KAUFFMAN
Feature Writer

On a recent cold, snowy morning, 97 Lancaster County Holstein breeders traveled by bus to Cecil County, Maryland area farms, the Aberdeen Proving Grounds then returned to Lancaster County over snow-covered roads after a final stop at Delta, York County.

The farmers started the annual Lancaster County Holstein Club tour with the conviction that the snow storm would turn to rain and they could take advantage of a dreary day to inspect several dairy set-ups ranging from a free-stall flush system for 300 cows to an enclosed tie-stall barn for 50 cows.

The first stop was Kilby, Inc., a family corporation consisting of John Kilby and his sons Rick and Bill. They handle a 300 cow herd in a free-stall set-up which utilizes a flush system and manure separator that enables them to re-use the water. The aisles between free-stalls are flushed twice a day from water stored at the lower end of the 10-stall parlor. The solid manure is separated from the water by a factory-used separator purchased second-hand by Kilby, Inc. The recycled water is returned to the below-the-parlor area for the next flushing. The solid waste is sold to a compost company at Oxford at the rate of 15 tons every other day. Some of the overflow liquid is stored in a large lagoon below the open free-stall barns. Liquid waste taken from a second, smaller lagoon is irrigated in the summer on 60 acres of corn ground and five acres of sudax.

The Kilbys group their cows into four feeding areas on the basis of production — 78 pounds, 50 pounds, 46 pounds, and 28 pounds of milk. They feed corn silage, beet pulp and 20 percent pellets in proportion to production. As production drops more grass silage replaces corn silage in the ration. Haylage and corn silage are stored in bunkers and fed in troughs stretching the length of the free-stalls.

The cows are milked by the three Kilbys and two full-time helpers. Two part-time workers are also employed in the winter with additional part-time help working in the summer. The herd maintains a 17,000 pound herd average on official DHIA test. Kilbys have a replacement rate of about 30 percent. Cows are taken from the parlor to a one-man operation breeding pen adjoining the maternity pens. If the name sounds familiar, the elder Kilby, John, was a Master Farmer in 1975.

Traveling a short distance over snow-covered roads, the tour next stopped at Knutsen Brothers where the visiting farmers were welcomed to hear the pedigrees and look at several of their 75 registered milking cows. With younger animals included, the herd totals 160. Warren and Bob Knutsen specialize in show and sale stock with high production and type. They have 18 Arlinda Chiefs, eight VG and two VG at 88 points. Three weeks ago they changed to a milking parlor set-up where their cows receive 26 percent pellets. High producers get extra ground grain from a magnetic feeder outside the parlor.

The Knutsens recently enlarged the concrete manure storage area to 60 feet x 60 feet with two ramps — one to push off unto a spreader when weather and ground conditions permit, and a second ramp to push off into storage.

The cattle are fed 70 pounds all corn silage ideally testing at 55 percent moisture, cut coarsely and stored in a trench. Very little hay is fed. Last fall the moisture tested a little higher and to avoid displaced abomasum problems a little hay is fed this year for extra fiber.

Calves are moved to individual pens after two days with their mother. They are fed milk replacer and grain — no extra water — until they are three months old. Then the calves are moved to a gated free-stall barn divided into four pens. Bob Knutsen said once a week scraping keeps pens in good condition and 20 minutes a day is all the time needed to feed the heifers. The Knutsens are pleased with their calf barn because only one of 138 calves placed there died.

The third stop on the tour was Alfred Crothers and Son's parlor-free-stall operation milking 90 head including 12 Elevation and 12 Transmitter daughters. Long Green Farms is a family corporation of Alfred and his sons Tom and Don. Alfred represents the fifth generation on the farm which was purchased from the state of Maryland in 1775. The farm consists of 300 acres, and 300 additional acres are rented. They have 200 acres of corn, 35 to 50 acres of soybeans, 60 acres of alfalfa, barley, wheat and mixed hay.

The Crothers have been milking their herd in a six stall herringbone parlor for the past four years. "No one could get me back into a stall barn," Tom said. Cows are fed grain in the parlor and high producers get more grain from a magnetic feeder in the free stall area. The cows also get an additional 12 pounds of grain spread in the bunkers with the corn silage and hay.

The cows are inseminated in the parlor during milking time. The Crothers use four bulls extensively: Charm Cross and Jet Stream from Sire Power; Astronaut from Curtiss and Virginian from Select Sires. They raise all their replacements. Calves are housed in the old barn in individual pens until three months of age when they are put into group pens. The free stalls are bedded with sawdust at a considerable savings. The Crothers buy $10 worth of sawdust a month to bed the 140 free stalls.

Manure is scraped and hauled every day — "It has to be hauled sometime anyway," says Alfred. The parlor flush is pumped out every two months.

Mrs. Paul King with Dave and Lesley pose before beginning work in the milk house on their farm. The King farm was visited on the Holstein tour.

Alfred Crothers entertained the group with his comical statements and carefree way of looking at things. "We quit trying to make money; we're just trying to stay here!" he exclaimed after explaining that they are surrounded by a 250 acre golf course and housing developments. He took over the farm from his father with the only money he ever borrowed in his life — $100. The agreement was "to keep his father, pay the taxes and the bills." He did not pay interest on the loan and never borrowed after that. When asked about the breeding program, Alfred characteristically remarked, "I wouldn't know about that, I just work here now and feed the calves." They have no hired help other than occasional part-time help in the evening.

Leaving Maryland slush-covered roads, the Lancaster Countians headed north to ice-covered hills of southern York County to see the Paul King farm. The homebred herd tests 660 pounds fat and 16,000 pounds milk. There were three excellent cows in the barn. Paul King has had a total of seven excellent cows and one excellent bull. He farms 125 acres of alfalfa and corn. He trades shelled corn for a commercially mixed feed ration.

The Kings moved into the barn two years ago from the "loosest housing set-up you ever saw," according to Mrs. King. They like the stall barn for displaying their herd which rates a BAA of 103.3.

Lygmunt Leszczynski, a Polish exchange student, staying at the Kilby Farm, hoses down the milking parlor during a tour by the Lancaster County Holstein breeders.

John Beyer, mechanic for A.B.C. Groff, Inc., New Holland, has returned from a week-long training program at the Sperry New Holland Service Training Center at New Holland, Pennsylvania. While at the center he attended sessions in the service and repair of a wide variety of modern farm machinery. Beyer, who resides in Kinzers, has been employed by A.B.C. Groff, Inc. for 1½ years. He has a farm background and a 2 year mechanical background.

American Viewpoints

Labor disgraces no man; unfortunately you occasionally find men who disgrace labor.
Ulysses S. Grant

Dutch Traders

Shareholders in the Dutch East India Company received dividends that in a single year equaled close to 40 per cent of their investment during the years from 1600 to 1800 when the Netherlands monopolized Europe's trade with Southeast Asia. In that period the Dutch sailed around the world trading gold, silver, iron, lead, textiles and manufactured goods for silk, indigo, opium, medicinal plants, tea, coffee, sugar and spices.

Funk announces new manager

BLOOMINGTON, Ill. — Funk Seeds International has announced the promotion of two members of their research staff, Duane Sywassink and James Hurst, to two newly-created positions in Research and Development.

Sywassink, as Manager of Field Research, will be responsible for the management and administration of research farms and facilities. He will also support Funk scientists and managers with evaluation programs for the performance of experimental and commercial products. Sywassink has been with Funk since 1956 and has been manager of corn breeding for northern maturities since 1966.

Hurst, in his new position as Manager of R&D Planning and Administration, will be responsible for overall administration, budgeting and maintenance of research information. He will also support R&D scientists with computer access and data processing capabilities. Hurst was a corn breeder for Funk from 1961 until 1966, and manager of central maturity research from 1966 until accepting his new position.

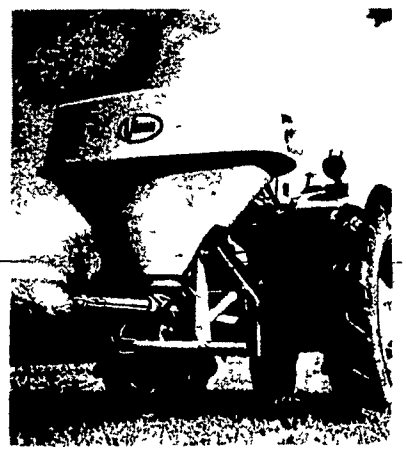
Sywassink, a native of Muscatine, Iowa, received his BS in agronomy from Iowa State University.

A Bloomington, Illinois, native, Hurst received a BS in agronomy from Illinois State University and an MS in agronomy from the University of Illinois.

Both men and their families reside in Normal, Illinois.

Vicon fertilizer spreader

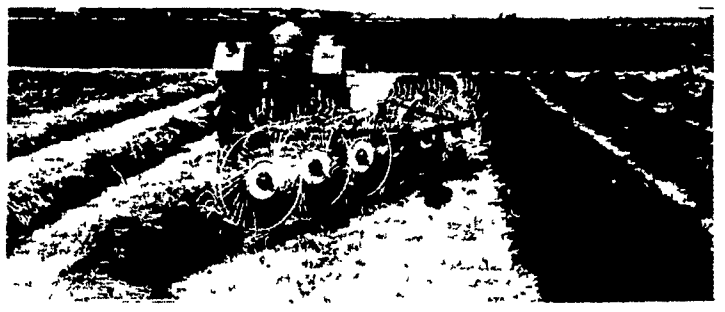
The most accurate fertilizer spreader you can buy



The Vicon Spreader uses an exclusive fast-action spout moving back and forth at 540 times per minute to give even, rectangular coverage instead of the usual circular pattern.
That means increased profit because you get uniform fertilizer coverage, resulting in better stands and higher yields.

Give the Vicon fertilizer spreader a try. It costs no more than others. But it's better.

Vicon new sprintmaster



Increase your hay raking capacity with faster, more complete raking plus gentler hay handling.

The new Vicon Sprintmaster finger-wheel rake, in addition to superior hay handling capabilities, is exceptionally adaptable to rough terrain. And, the New Sprintmaster is more useful in short crops and rakes wider swaths at higher speeds.

Vicon the better idea from Holland

THREE NATURAL SOIL CONDITIONERS

All very economical because they aid nature to do her free part, to gain back the life of the soil which you lost by chemicals.

Excellent to ease prophecied drought and pestilences, because roots are much longer, and spongy soil holds moisture.

One product multiplies earthworms fast. One supplies missing trace elements. One is a nutrient release agent and wetting agent to make both natural foliage sprays and chemical sprays go further, very economical compared to competitive products. The latter has much use. Distributors wanted in other counties. Free literature.

Homestead Notes

Solanco family opens home to refugees

By SUSAN KAUFFMAN
Feature Writer

Twin Pond Farm in Little Britian Township, Lancaster County, is very different from the people-packed city of Saigon Vietnam but it has become the home for two brothers - Dat and Thanh Tran.

The Jesse Wood family, Nottingham, R2 has sponsored the brothers since July 10, 1975. The two were not the first young people from other parts of the world to live with the Woods. Opening their home and the warmth of their family to others began five years ago when their oldest daughter, Cindy, wanted to be an exchange student to a Spanish speaking country as an extension of her Spanish classes. In January, February and March of 1971, the Woods had a very pleasant experience with an exchange student from Lima, Peru who came to stay with them. Cindy went to South America in June, July and August of that year.

Just previous to the first exchange student's arrival, the Woods had remodelled and built accommodations for up to fourteen guests. From 1971 to 1973 the Woods had guests stay during the summer months. Their guests enjoyed the rural setting so much that their appreciation of it touched the Wood family into realizing how much they had to value. "The Lord has been so good to us - we have so much to share with others," Ruth Ann says. In 1973 Ruth Ann accepted a full-time employment as a rural mail carrier thus ending the farm vacation business. "This left us free to take on a responsibility such as this sponsorship," Ruth Ann remarked.

Jesse and Ruth Ann have five children: Cindy - 22, Jesse - 21, Edna Sue - 19, Linda - 17 and Jeff - 13. Edna Sue, Linda, and Jeff are at home. Jesse is married and works with his father on the 265 acre dairy farm where they milk 65 registered Guernsey cows, feed 30 steers, farm 300 acres of crop ground and do custom work for neighbors. Cindy is a Physical Education and Health teacher in North Carolina, and so making Dat and Thanh welcome was primarilly Edna Sue's, Linda's and Jeff's opportunity.

Prior to making any inquiries into sponsoring Vietnamese refugees, Jesse and Ruth Ann talked with their children and all were in favor of such an undertaking. Ruth Ann talked with their pastor about such a plan and he suggested they wait to see what support the church's refugee family might need. The Woods really weren't satisfied with that and hoped something more specific might materialize. "It was really very strange how things worked out," said Mrs. Wood. One day her mother called and said she had been contacted by friends in the Lutheran Placement Service to ask if she knew of a family who would sponsor two non-English speaking brothers at Indiantown Gap. The boys had been difficult to place because they were without a parent, spoke almost no English, did not want to be separated, one was 11 and the other 23. They needed a home to learn the English language and American customs without having to earn their keep.

"This was just what we wanted," Mrs. Wood remarked. After approval of sponsorship through the Lutheran Placement Service and a short three-week processing of applications, Dat and Thanh came to Twin Ponds Farm.

The boys spoke almost no English - in sharp contract to the foreign exchange students the Woods had had in their home. The exchange students were taught English as a second language from the beginning of their schooling and were easy to communicate with from the start of their visit. Thanh, the younger brother, said, "I am fine, how are you?" - and that was all. Eleven year old Thanh picked up the English language fast and mixed with other children much more spontaneously than did his older brother Dat. The Woods took Dat to special English classes in Lancaster during the summer and he presently attends weekly English classes at the Mechanic Grove Church of the Brethren, Quarryville R2.

At first the family had to rely on translations through other English-speaking Vietnamese in the area. If the Tran brothers and the Woods came to a point in their discussion were sign language couldn't get the point across, they would call the English-speaking Vietnamese and have them relay the meaning to the boys in Vietnamese. Thanh, in a few short months, has learned enough English to accomplish grade level work in a regular fourth grade class at Little Britain Elementary School. His bright shining black eyes and his friendly contagious smile have endeared him to his adoptive family, his classmates and his teachers.

A family portrait plus is what the Jesse Wood family posed for during a recent visit. Show above are (back) Edna Sue, Linda, RuthAnn and Jesse. (Front) Jeff, Thanh Tran and Dat Tr

The older brother has successfully adapted to life in his new country. "Dat was very lucky to get and keep a job," explained Ruth Ann. He has been employed as a baker at Willow Valley Restuarant, Lancaster, since September. "At first, during the summer months, it wasn't too bad for him out here in the country, but when the children went back to school, it was so quiet here on the farm - so different from the city of Saigon he was accustomed to," commented Jesse. Getting and keeping a job has brought a real change in Dat. He has contact with other people - both Vietnamese and American-and he has something to do during the day. "These two were big-city boys," says Jesse, they are very willing to do whatever we suggest as a family or parent, but they had no experience with rural life before coming to America."

Dat and Thanh's father was killed by the Viet Cong five years ago. Their mother worked during the day and Dat took his little brother Thanh with him to work on a boat in the Saigon harbor. Sometimes they would be out on the boat three days then return home for a day or two. Dat was out on the boat when the take-over of the city started. He wanted to leave the boat and return to the family, but those who tried to return were immediately captured. Thus, Dat and his brother Thanh stayed on the boat which traveled to Guam. From there they boarded a plane which flew them to Indiantown Gap. They were at the Gap a month before being placed with the Woods. They have not been able to contact their natural family since their arrival here.

In sharp contrast to the very Americanized foreign exchange students from South America, these boys had no possessions other than a suitcase full of clothing provided by the Red Cross. "They never had any experience with a lot of our foods and customs so they had to learn a lot from our children's examples," explained Ruth Ann. "We tried not to set rules without good reasons they could understand," said Jesse. "We did not feel we could force our customs on them without their being aware of why they are as they are." "Our kids were great; they could teasingly teach them table manners and correct them without causing problems," Ruth Ann explained.

Although there were inconveniences such as driving Dat to and from work and classes and finding ways to communicate, there have been none they haven't been able to handle in stride, according to Ruth Ann and Jesse. "Our children really appreciate what we have and are glad to share with others since they have seen these Vietnamese boys marvel at what we take for granted." Thanh remarks often, as when the refrigerator was stocked full after a trip to the grocery store - "very much money, no have at home." He especially prizes oranges, fresh fruit and ham. Dat is so overwhelmed with our variety of foods that at work he says he always orders a "club sandwich or ham loaf, - all else I not know - very many!"

When asked if the boys want to go back to Vietnam, they replied that they longed to be reunited with their mother and brothers and sisters but would not like to leave our cultural and economic advantages. Eleven year old Thanh's goal is to study hard, make a lot of money, then be able to bring his mother to America.

The Jesse Wood family, like many in the United States, has opened their home to strangers and in doing so have learned a valuable lesson about the advantages of living in a country such as the United States.

Country Corner

'Gardening Woes

By MELISSA PIPER

The following poem is dedicated to the gardeners and what their future may be.

The farmer raised his palm and
wiped the sweat from his head.
It's going to be a good year
if the weather holds out he said.

I hope this spring is not too wet
and the summer months aren't dry,
If the sun is too hot for tomatoes
those delicate plants will fry.

The farmer's wife simply nodded
and brushed the dirt from her dress,
She picked up another packet of seeds
Remembering last year's weeding mess.

I hope these peas do well she spoke
drawing the hoe through the soil,
We've waited so long for gardening again
but it seems like an awful toil.

Her husband laughed as he planted the beets
and laid the corn to rest,
We'll do okay he cried out loud
without insects, rabbits and pests.

The planting was long and hard,
but when the task was done
The couple gathered their seeds and tools
the horizon red blazen with sun.

Spring has come and we've done our best
the farmer told his wife,
the rest is up to the rain, sun and soil
to offer the seeds a life.

Then trudging back to the farm house
the wife dropped her hoe and pan,
But what if our yield is great she cried
And I don't have those lids to can!

Easy meals for busy farm families

Although the fickle weather of March and April often sends one searching for a warm coat and wool mittens, spring is perhaps not that far away and when it arrives there will be many activities to occupy a farm family's time.

Spring is a time to mend fences, cultivate the ground, plant a garden, the semi-annual house cleaning and lots of other busy plans thrown in.

While time in the kitchen may be limited, good hearty meals can still be prepared with a minimum of effort and time. We have provided recipes for several main dish meals and easy dishes that will help cut time in the kitchen and give you more time with the family.

Lasagna - Easy Style

6 ounces lasagna noodles
1 large can meat flavored spaghetti sauce
½ teaspoon dried oregano
1 cup cream-style cottage cheese
1 - 6 ounce package sliced mozzerella cheese

Cook noodles in salted boiling water and drain. Simmer spaghetti sauce and add oregano. Grease a baking dish and pour in ½ cup of the sauce. Add a layer of noodles and cheeses. Cover with sauce and repeat. Bake at 350 degrees for 40 minutes. Serves 5. A double batch of this recipe can be frozen for future use.

xxx

Citrus Salad
A Large Orange

2 large apples diced
1 orange peeled and cut in chunks
½ teaspoon orange peel grated
½ cup pecans chopped fine
½ cup flaked coconut

Combine fruit and nuts with peel. Add salad dressing and toss gently. Garnish with toasted coconut. Serve on lettuce leaf. Serves 5.

xxx

Meatball Dinner Special

½ pound ground beef
½ pound ground pork
1 small onion minced
¼ teaspoon oregano
¼ teaspoon crushed parsley flakes
salt and pepper to taste
3 slices white bread cubed
1 large egg, beaten

Combine ingredients and form into medium sized meatballs. Heat oil in skillet and slowly brown meatballs until well heated. Continue to simmer at low heat.

Cook wide egg noodles (1 package) in boiling salted water and drain and set aside. Prepare sauce.

Sauce

1 can condensed cream of mushroom soup
½ can milk
½ cup sour cream

Drain fat off meatballs and add in sauce. Simmer on low heat for several minutes. Serve meatballs on noodles. Serves 5-6.

xxx

Easy Cheese Biscuits

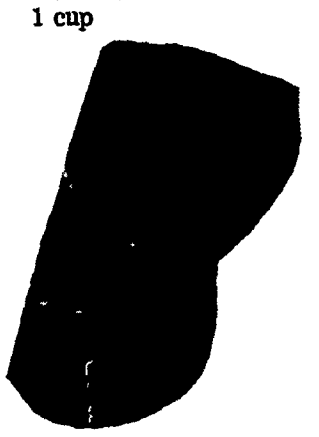
1 large package refrigerator creseant rolls
1 tablespoon butter
aged grated paremsan cheese

Unroll creseant biscuits and lightly butter. Sprinkle with parmesan cheese and roll up again. Place on a lightly greased cookie sheet and bake according to directions. Good to serve with meatloaf or meat dishes.

xxx

Special Banana Treat

Chocolate wafers crushed to 1 cup



Instant prepared banana pudding
2 medium bananas
½ cup shredded coconut

Prepare banana pudding. Brush banana slices with lemon juice. Line bottom of parfait glass with wafers and add layer of banana slices. Fill with pudding and top with toasted coconut. If large glasses are used then repeat layers. Vanilla wafer cookies can be used for substitute for chocolate cookies. Makes four servings.

xxx

Company Fruit Salad

1 large can fruit cocktail
1 medium package frozen strawberries
1 medium package frozen blueberries

Combine fruit cocktail with partially thawed strawberries and blueberries. Cover and chill in the refrigerator 3 hours before serving. Frozen melon balls can be added if desired. Serve with cookies or sponge cake.

xxx

Spiced Ham and Potatoes

1 large can luncheon meat
1 large can sliced potatoes
small can ch
mushrooms
5 slices of processed
spread

Grease a wide
baking dish. Line with
of luncheon meat. Cov
a layer of potatoe
mushrooms. Cover
cheese slices and repe
top of casserole with
Bake at 350 degrees
minutes. Serves 4.

Women's Calendar

Saturday, March 20

Thursday, March 25

Society 28 meeting for a game night 7:30 p.m.
Society 11 meeting at 1:30 p.m. - speaker will be Fay Stoner.

Saturday, March 27

Society 4 meeting at the Ironville United Methodist Church to entertain Society 22 - luncheon at 12:30 p.m.
Society 23 having a sale at the home of Mrs. Ross Barley.

Society 29

Farm Women Society 29 held their March meeting at the home of Marian Brenneman, Mount Joy R1, recently. Linda Heisey, Mount Joy acted as co-hostess.

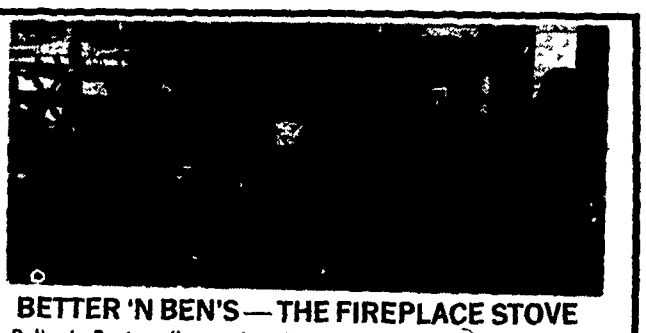
During the business meeting conducted by Judy Erb, members voted and chose St. Joseph's Mobile Unit as the county project participation.

Linda Heisey led devotions followed by special singing from three goup members.

The Ways and Means Committee announced plans for an April 8th Sub Sale.

The program for the evening was a talk given by Mrs. James Reapsome on the subject of "Self-Esteem and its relation to our children."

The next meeting will be a "fun night" held at the home of Carolyn Newcomer, Mount Joy.



BETTER 'N BEN'S — THE FIREPLACE STOVE

Better 'n Ben's is the most exciting and innovative breakthrough in woodburning stoves since the Franklin. Uniquely, but simply designed, Better 'n Ben's is placed directly in front of the fireplace opening. The combined stove and fireplace cover panel is securely and safely fastened in minutes so the stove utilizes the existing fireplace flue. It will burn seasoned wood throughout the night. Homeowner reports on this new stove cite up to 60% savings in fuel oil costs and the kilowatt consumption in electrically heated homes cut more than half.

Better 'n Ben's is attractive in your home and is made of sturdy, long-life heavy black iron that radiates heat well. It has a broad top to provide a large cooking surface. Fully guaranteed.

Ladies Have You Heard?

By Doris Thomas

Lancaster Home Economist

Evaporated Milk is Convenience Food

Evaporated milk is a versatile, convenient product to have on hand. Evaporated milk is made with fresh, fluid whole milk, which is first pasteurized, then over half the water is removed through a vacuum process. This concentrated milk is next homogenized, and vitamin D is added. Finally, the milk is sealed in cans and sterilized by heat.

Another product available on the market is evaporated skimmed milk. It has less milk fat and therefore contains less calories but is not as rich tasting.

Evaporated and condensed milk are not the same. The sweetened condensed milk has had sugar added before the evaporation process. The end product is yellowish in color and thicker and sweeter than evaporated milk. Sweetened condensed milk has a caramel-like flavor and appearance. Its 40 to 50 percent sugar content acts as a preservative and when stored under like conditions, has a longer shelf life than evaporated milk.

Use evaporated milk undiluted, partially diluted, or reconstituted. Basically, if you add one part water to one part evaporated milk, you essentially have whole milk again.

Use a combination of dry milk and reconstituted evaporated milk in place of fluid whole milk. This saves on the milk bill, while keeping the taste similar. Use at full strength, evaporated milk lends extra body and creaminess to sauces and desserts.

Substitute evaporated milk in recipes calling for buttermilk, sour milk or sour cream. To substitute in place of buttermilk, add a few drops of vinegar or lemon juice before using. Add one tablespoon vinegar to one cup of reconstituted evaporated milk (½ cup water, ½ cup evaporated milk) and you have instant sour milk. That one tablespoon of vinegar added to one cup of evaporated milk straight from the can makes sour cream.

When stored properly, unopened cans of evaporated milk will keep several months, ready for instant use. Store unopened cans of evaoprated milk in a cool place, preferable not above 70 degrees F nor below freezing. Before opening can, clean the top with a clean, damp cloth. Once opened, store milk in original container in the refrigerator. Keep top covered and use within four or five days. Do not freeze this milk because freezing may cause separation and loss of the smooth texture.

Establish Clothing Care Area

Clothing care ranks second only to meal preparation in importance in the average home. Clothing care includes washing, drying, ironing, pressing, mending and constructing.

Did you ever stop to think that there's good logic to combining laundry and sewing facilities to make a complete clothes-care center. For example, a table used to sort and fold laundry can double as a cutting surface for constructing clothing.

New developments in fabric and changes in laundry equipment also allow greater flexibility in locating a laundry center. Today, the laundry area may be in a first-floor utility room, kitchen, sleeping area or basement.

A first-floor utility room eliminates climbing stairs and allows you to do other household tasks at the same time. A laundry area may be located in the kitchen but, because most soiled clothing and bed linens collect in the bedroom-bathroom area, it's wise to locate the laundry between kitchen and bedroom-bathroom area to save steps.

With fewer demands on basement space, many homeowners prefer locating laundry facilities there. Also, basement laundry areas remove the noise from the rest of the house and are usually located near the hot water source - and energy saver.

But basement laundry centers have disadvantages too. You'll increase the number of trips up and down stairs and find it difficult to combine laundering with other household activities.

Farm women slate hoe-down

The Society of Farm Women is having a family hoedown on March 27 from 8 to eleven p.m. at the Shartlesville Fire Hall and the public is invited! The event, which has been described as the Society's version of the charity ball, will feature Roland Pothero calling the dances to the music of the Majestics. In addition, there will be a demonstration of western style square dancing, door prizes and a cake walk.

Members of the eleven local societies have decided to combine an evening of family fun with their recent fund-raising activities. The Society recently donated $500.00 worth of furniture to the Hamburg State School, and proceeds from Saturday night's dance will go to a similar cause. Tickets are $1.50 for adults and $.75 for children and may be purchased from members or at the door. Refreshments will be on sale.

Society 30

The Society of Farm Women 30 held a meeting Monday, March 15, at 7:30 p.m. A local doctor spoke to the group. During a business session a $10 donation was given to the Easter Seals.

The next meeting will be held April 19, at the home of Mrs. Donald Good, 226 Spruce Street, New Holland, at 7:30 p.m. The meeting will be a service night for the Cancer Society. Each member should bring an old sheet, scissors, thread, and a needle.

Society News

A Lancaster County Farm Women's Society recently met at the Eden United Church of Christ. Mrs. Jay Habecker, president conducted the business meeting.

Entertainment included a movie intitled "Heritage Horizans" shown by Mrs. Doris Thomas and a talk on Meals on Wheels by Ruth Brown.

The April meeting will be held at the home of Mrs. A. C. Dietrich, in East Petersburg.

UNION CEMETERY ASSOCIATION

Are you considering a cemetery plot? If so - consider the beautiful countryside cemetery at Union, a high level setting and well kept burying ground in Southern Lancaster Co. on route 472, 1½ miles south of Kirkwood, near the Union Presbyterian Church. A 4 grave lot sells for $300.00. until July 1, 1976 when price will be increased to $350.00. It's a real estate investment you'll need someday.

Home on the Range

Recipes for Dandelion Salad surely indicate that spring cannot be too far in the future! This week one of our readers sent in her favorite version of the spring meal and it looks very tempting!

We have received a number of Easter Recipes and we're looking forward to publishing them in our April 10th edition. If you have a favorite please send it along.

Looking for a new main meal dish that is just a little out of the ordinary - why not try Lamb and Fruit Kebabs? Lamb is a nutritious meat and will add zest to those same old meals! The recipe is courtesy of the American Lamb Council.

xxx

Chocolate Chip Cake

Cream 1 stick of butter with 1 cup sugar. Add 2 eggs and 1 cup sour cream. Sift 2 cups flour with 1 teaspoon soda and add 1½ teaspoons baking powder. Add the dry ingredients and 1 teaspoon vanilla to the creamed mixture.

Pour ½ of the butter in a 9 inch pan. Top with ½ of topping and ½ pgk. of chocolate chips. Repeat with the remainder. For topping mix ½ cup sugar with 1 teaspoon cinnamon. Bake 30-40 minutes at 350 degrees.

Judy Lynn Weaver
Ephrata, Pa.

xxx

Lamb and Fruit Kebabs

1 pound diced lamb shoulder
1 can (1 pound 13 ounces) peach halves
4 medium bananas cut in 1-inch slices
1 package pitted dates
24 red marachino cherries
2 tablespoons butter or melted
1 tablespoon lemon juice
1 teaspoon cinnamon
¼ teaspoon cloves

Arrange lamb on skewers. Drain peaches, reserving syrup. Coat bananas with syrup. Arrange peach half, three dates, three banana slices and three cherries on each of eight skewers. Combine melted butter with lemon juice, cinnamon and cloves for basting sauce. Broil lamb 3-4 inches from source of heat. Add fruit skewers and brush basting sauce. Cook 5-7 minutes longer and baste frequently. Great for outdoor barbeques!

xxx

Breakfast Rolls

4 cups flour
¼ cups sugar
½ teaspoon salt
1 cup butter
1 cup milk
2 eggs
¼ cup warm water into which you dissolve 1 package yeast

Mix in a large bowl, set in refrigerator over night. Next morning roll, cut and sprinkle with cinnamon and sugar. Roll up and slice ½ inch thick. Bake at 400 degrees for 10 minutes ice top when cool.

Rebecca Fisher
Honeybrook, Pa

xxx

Dandelion Salad

4 cups chopped dandelion
3 hard cooked eggs, chooped
4 slices of bacon fried crisp and drained

Save drippings from bacon and break bacon slices into small pieces.. Make dressing:

Dressing:
1½ tablespoon flour
1 teaspoon salt
1 egg beaten
2 tablespoons sugar
¼ cup vinegar
2 cups water

To make dressing: mix together dry ingredients and add egg. Add vinegar and water and blend well.

Heat bacon drippings and mix other ingredients in. Cook until thickened. Pour over cleaned and chopped dandelion mix lightly. Pour into serving dish and add bacon and eggs for a garnish.

Mrs. G. M. Sadler
Myerstown, Pa.

xxx

Cold Cereal

6 cups oatmeal
1½ cup wheat germ
1½ cup brown sugar
1½ cup coconut
1 teaspoon salt
½ cup butter

Mix ingredients and bake slowly at 350 degrees.

Linda Hoover
New Holland, Pa.

xxx

Pear Salad

1 large package lime gelatin
1 quart pear halves
8 ounces cream cheese

Put pear halves in 9 inch square pan. Dissolve gelatin in 2 cups boiling water. Add pear juice and cold water to make 2 cups. Pour half of gelatin mixture over pears and chill until set. To remaining gelatin add cream cheese and whip until cheese is blended. Chill until thick and pour over pear mixture.

Mrs. Franklin Reichard
Lititz, Pa.

xxx

Berks Co. Society 4

The Berks County Society of Farm Women, Group 4, met at the home of Mrs. Ruth McMullen for the March meeting. President Linda Taylor called the meeting to order with 12 members and a guest, Miss Virginia Taylor, answering roll call to "Name a plant in the Bible."

A thank-you note for valentines received was read from the Hamburg State School. Cards for shut-ins were sent to Sara Marsteller, Paul Becker and Jacob Rothenberger, and congratulations were sent to Mrs. Dorothy Barrett and her new daughter Angelia.

The Ways and Means Committee announced a refreshment stand at the public sale of Mrs. Edna Angstadt, Earlville on April 16, help and baked goods were requested. It was also mentioned that members will be taking orders for Stanley Home Products during the Spring and Summer months.

The group was reminded of the square dance at the Shartlesville Fire Company on March 27th. Mrs. Esther Good and Mrs. Jean Waldo volunteered to bake cakes for the affair, and Mrs. Ferne Kulp and Linda Taylor will donate door prizes.

Plans were made to assist the other County groups at Berks Heim on April 8 when the guests will be entertained with a game party. Mrs. Elsie Rothenberger will supply an angel food cake for the occasion, and the remaining members of the group will donate door prizes.

It was mentioned that several members are going to the Spring Rally in Gettysburg on May 12 by bus leaving Oley Legion at 8:30 a.m.

The next meeting will be held at the home of Mrs. Verna Taylor, Boyertown R4 at 6:30 p.m. The group will leave from there for the Fleetwood Grange Hall to help Group 6 celebrate their tenth anniversary.

Following the business meeting Mrs. Violet Roberts gave a talk and displayed liquid embroidery items she had made. Each lady took a turn at painting.

Society 25

The society of Farm Women 25 recently met at the home of Mrs. Richard L. Gregory Conestoga; with devotions in charge of Mrs. John Gerlach.

The April meeting will be held at the Farm and Home Center at 12 o'clock noon. Society 25 will entertain Society 12. A covered dish is being planned.

Pork recipe corrected

KUTZTOWN — For all those readers who discov the unhappy fact that the recipe for Creamy Mushroo Pork Chops which appeared in the report of the P Producers Banquet last week was incomplete, here again.

Creamy Mushroomed Pork Chops

4 pork chops, ½ to 1 inch thick
seasoned flour for dusting
2 tablespoons butter
½ pound fresh mushrooms
2 tablespoons finely chopped onions
1 cup sour cream
1 cup chicken bouillon
3 dashes white pepper
2 cups cooked noodles
¼ cup shredded cheese

Preheat oven to 350 degrees. Dust chops and bro Slice mushrooms and saute them quickly in butter w onions. Stir flour into sour cream. Stir and heat just boiling. Slowly stir in bouillon. Heat to boiling. A seasonings and cheese. Mix with noodles. Pour into shallow casserole. Top with chops. Bake covered fo hour.

NUTRITION A LA CARTE

Here's a winter party idea — a skating party buffet. Serving piping hot oyster stew along with crusty bread and butter, also a healthy Caesar salad and hot mince pie. You'll be a winner with such a menu and the skating party will get you and your friends out of doors for some winter exercise.

The idea that certain foods can cause arthritis, or cure it, is unfounded. Extensive research has failed to show that the absence or presence of any food or vitamin will either cure or cause any form of arthritis. Careful medical examination of people who claim cures in this manner usually shows the people didn't really have arthritis.

The importance of calcium and phosphorus is obvious when you consider that these minerals comprise roughly two to three percent of the weight of an adult. Ninety-nine percent of the calcium and 80 to 90 percent of the phosphorus in your body are in your bones and teeth. The remainder is in your soft tissues and body fluids.

Everybody needs protein. In fact, on a dry weight basis, you are about half protein. A third of your protein is in muscle, a fifth in bone and cartilage, and a tenth of your protein is in your skin. The rest is distributed in other tissues and body fluids. For repair and maintenance you need protein in your meals every day.

Did you know it takes 115 gallons of water to grow enough wheat for one loaf of bread? Or that the average person in the United States uses some three-and-a-half-million gallons of water during his lifetime? Such facts are staggering, but serve to prove our need for a vast supply of clean water to produce our food.

As one of the four food groups, dairy foods are important because these foods are your very best source of calcium. You need calcium, even when you're an adult, for upkeep of bone and for proper functioning of nerves and muscles. Milk and its products are important, too, for protein, and B vitamin, riboflavin, as well as other vitamins and minerals.

Society 21

Farm Women Society 21 met March 11, at the home of Mrs. Melvin Meck, Willow Street with 20 members and one guest present. Roll call was answered by members naming the plant they brought plus a tip on its care.

Thursday, March 18 members will be going to Conestoga View to play Bingo.

Refreshments were served by Mrs. Meck, Mrs. Lewis Aument and Mrs. Clair DeLong.

Ida's Notebook

Ida Risser

Guess which day I finally sent my order to the seed company? The day of the big March snow was when I found time to list the vegetables, flowers and shrubs that I wanted to try this year.

I even ordered a couple English Walnut trees as they are my favorite nut. Now, I'm hoping they will grow and bear in my lifetime. If only I'd planted them 20 years ago, we'd have some now. A tree stands as a reminder of a person long after they are gone.

Over 75 years ago my great-uncle cut a walking cane from the main trunk of a small oak. This same tree sprang up again and is now a huge oak standing on Butter Road near the Shreiner homestead. I never pass it but what I remember this man.

xxx

Last Friday evening our son Jeffrey surprised us by coming home from graduate school for the weekend. We teased him that he arrived "just" as we were sitting down to our evening meal. It happened to be stuffed beef heart and we had plenty to share.

Really, he did earn his food. He put some of the 15 ton pile of sawdust in the cow stalls. He also calibrated his father's truck speedometer, which didn't work, by using my mixmaster and a ballon plus watching the electric clock - after he adjusted a spring.

Then on a windy day on a tall, tall ladder he adjusted the television antenna on the house roof. Jeff topped off the day by helping to dig the ditch, through my garden to the well, that will carry our water in a new plastic pipe as we fear our old one is corroded. Maybe he lost weight instead of gaining some by being home.

REPLACE COSTLY HAY

AND GET MORE MILK FROM YOUR COWS, TOO!

NOTE BENEFITS:

1. Twice The Protein of "Pulps"
2. Twice The Ton Of Hay
3. All Vitamins and Trace Minerals Are Included
4. Available In 3 Ton Quantities, Bags or Bulk.
5. Extremely Palatable, Cows Really Go For It. Feed 4 or 5 lbs. Once A Day To Replace 8 to 10 lbs. of Hay.
6. Many Feeders Report An Increase In Production when Roughage Pellets Are Fed.

Sourdough parable related at farm women's meeting

By SALLY BAIR
Feature Writer

One tradition of Farm Women Societies to entertain members of another Society once a year. It fosters fellowship among members, and spring is the time when entertaining seems to reach a peak.

Despite a postponement caused by last week's snow storm, Society 22 entertained members of Society 9 at a luncheon at the United Church of Christ in Willow Street.

Mrs. Melvin Lauver of Akron provided both food for thought and for eating, a most enjoyable combination. She spoke of the "Parable of the Sour Dough," and at the conclusion of her talk she provided samples of sourdough baking and gave out sourdough starter for those who wished to try their hand with it.

Her interest in sourdough began quite by accident when someone anonymously left some sourdough starter in the Lauver car, with recipe cards and directions for feeding it to keep it alive and working.

For months, Mrs. Lauver said, she didn't know who had given it to her, but after many inquiries and nine months she did locate the giver of the starter. In the meantime, she said, she simply continued to feed the sourdough, used it in baking and enjoyed the delicious products which were the result. "I've been hooked on sourdough ever since," she said, "and I have not let it die."

Mrs. Lauver said, "The results are not always the same with each batch of sourdough, but everything is always delicious."

In studying the history of sourdough, Mrs. Lauver discovered that it was known over 6,000 years ago, and next to the honeybee it is one of man's most important discoveries.

She talked about the importance of sourdough to the early settlers in this country and said that sometimes when it got very cold, they would take it to bed with them to keep it "warm, alive and active." She said on moving day it was the last thing out of the old cabin and the first thing into the new one. Propsectors carried it around their neck in a bag to keep it warm. It was very precious."

Mrs. Lauver then related how "the Lord spoke to me about my sourdough."

She said there are many similarities between the sourdough which she nurtured and the life of Christians. She said, "I had been given the sourdough not because I had earned it or because I was worthy of it. The same is true of Jesus. He comes to live within our entire being, not because we're worthy."

Mrs. Lauver said that the sourdough needs to be fed, and in the same way, it is important to read His work and to be silent and let him talk to us. She explained that she had received rules to follow with the sourdough, and likewise the Bible has rules by which to live.

One trait she has acquired in working with her sourdough is patience, because it is a lengthy process to have it rise properly with good results. And she said, "I was told the 'my timing is not always your timing'."

One of the properties of sourdough bread that makes it a favorite is that it "hangs together and doesn't crumble" when it is sliced, she said. Christians, too, must hang together, she said.

The sourdough starter must be used to keep it working, and Mrs. Lauver said "In the same way we should use our lives and share the Christian
with enthusiasm, and
a spiritual life toget

Farm Women Societies

Society 19

Farm Women Society 19 met recently at the Home of Mrs. John Ruhl with 23 members and three guests in attendance.

Mrs. Arthur Landis led in devotions after which roll call was answered by naming a sign of spring beginning with last name initial.

Mrs. Harold Saylor, the vice-president, announced that on April 3 the group will be entertained by Society 1 at a luncheon at the Farm and Home Center on Arcadia Road in Lancaster.

Mrs. Jane King, Lititz, was the guest speaker and explained the function and purpose of "Contact."

The next meeting will be April 10 in the home of Mrs. Lloyd Rohrer, Lititz, Pa.

Berks Co.

Society 1

The March meeting of the Farm Women Society 1 in Berks County was held recently at the home of Catherine Yanos. Mrs. James Levengood gave a demonstration on the art of quilling. Nineteen members were present for the program.

Members were reminded of the following dates: The County Hoe-Down in Shartlesville on March 27; trip to Longwood Gardens on April 27, the Spring Rally in Gettysburg on May 12 and the bicentennial sale on May 22.

The County Convention has been scheduled for October 2 and will be held at the Berks County Ag Center.

Society 31

Society of Farm Women 31 met on Monday at the home of Mrs. Mark Risser. Mrs. Kenneth Delong led the members in devotions. Roll call for the evening was "a close call" with each member telling her experiences.

Mrs. Harriet Suter of the American Cancer Society was the speaker for the evening and presented a movie.

The next meeting will be held at the Mechanic Grove Church of the Brethren on April 19 at 7:30 p.m., The group will be entertaining Society 18.

Consumer advocate notes price inequities

Ellen Haas, legislative liaison and former president of the Maryland Citizen Consumers Council, says that consumers and farmers are both being short-changed in our present U.S. food marketing system.

Mrs. Haas spoke recently at the fifteenth annual meeting of the Maryland Council of Farmer Cooperatives, held in the Holiday Inn at Frederick. Some 115 persons were in attendance, according to Robert J. Beiter, Extension agricultural economist at the University of Maryland in College Park.

Consumers, said Mrs. Haas, feel too much money is going to the middle sector in food marketing. The price consumers pay is too high and the return farmers get is too low. The farm-to-retail spread rose 22 percent in one year, Mrs. Haas noted.

"Since 1972 consumers have seen their total food bill skyrocket," she said. "In 1972 the U.S. Department of Agriculture estimated that an annual market basket for a family of four cost $1,310.82. The same market basket cost $1,749.56 in 1974. That's an increase of nearly 34 percent in two years," she pointed out. Mrs. Haas said she expects the 1975 figures to be just as dismal.

The hardest hit sector of the population is the low-income consumer, she said. He spends 40 percent of his income for food. Consumers realize, she said, that the spread between what the farmer gets and the consumer pays has increased greatly.

The farmer is frustrated, too, she feels. "Spreads between the farm gate and the supermarket counter have increased even more dramatically than food prices," according to Mrs. Haas.

The reason for this spread, she said, can be found somewhere in the middle sector. The farmer's share of the consumer's market basket dollar is only 40 cents and has been so for a long time, she said.

But until adequate information about the various components in the middle spread and profit margins on specific products are available to agencies like the Federal Trade Commission, no action can be taken by the government or consumer groups, said Mrs. Haas.

Mrs. Haas, who is also consumer coordinator for the Community Nutrition Institute, advocated the proposal for a Consumer Protection Agency. She disagreed with the Administration's plan to create instead consumer committees in federal agencies.

"Consumers don't need that kind of committee," said Mrs. Haas. "What they need is someone to speak in matters that affect their welfare, their health, and their pocketbooks."

Mrs. Haas said she also would like to see the creation of a national food policy to balance the needs of farmers for an adequate return on their investiment and those of consumers for fair, reasonable prices.

In addition, this policy would create a food reserve system, she said, and a system of export management for long-range planning to project ahead and determine food needs for the country.

In answer to a question which followed her speech, Mrs. Haas declared that her concept of export management does not infer export controls for U.S. agricultural products.

Poultry conference convenes April 13

The annual Poultry Sales and Service Conference is scheduled for April 13 and 14, 1976 at The Pennsylvania State University.

The program is designed to assist producers, salesmen, and equipment servicemen in solving current problems.

Topics to be discussed include: Poultry Housing Principles; Adenovirus; DPW - Present Status; Egg Pricing; Gumboro Disease; Options in Pullet Rearing; MG Update - Egg Sanitation; Broiler Condemnation Project - Update; plus other subjects of interest.

Featured at the annual banquet will be Dean James M. Beattie of the College of Agriculture speaking on "Getting Acquainted With a Dynamic Poultry Industry."

For additional information and a copy of the program, please write to: Agricultural Conference Coordinator, 410 J.O. Keller Bldg., University Park, Pennsylvania 16802.

Ayrshire, Jersey, Brown Swiss 4-H Club Officers are from left to right: Jay Eshleman, Pres.; Ellen Schmuck, Sec.; Lois Wanner, Vice Pres.; Robe Witmer, Treas.

Dairy club elects officers

The reorganizational meeting of the Ayrshire, Jersey, Brown Swiss 4-H Club was held Monday, March 8, at the Farm and Home Center. President, Warren Schmuck, opened the meeting and conducted the election of officers. The following officers were elected to serve for 1976: President - Jay Eshleman, Vice President - Lois Wanner, Secretary - Ellen Schmuck, Treasurer - Robert Witmer, Song Leader - Dennis Martin, Game Leader - Teresa Kupp and Kerry Boyd, Newsreporter - Judy Witmer.

The club membe divided into groups a judged the cows in t Hoard's Dairymen C Judging Contest.

The next meeting will held at the Farm and Hom Center on April 12 at 7 p.m. New members a encouraged to come.

Corn Roasting

When roasting frozen corn-on-the-cob partially thaw the ears first. Then brush with melted butter or margarine, salt and roast at 400 degrees for about 20 minutes.

Rice Advice

When cooking brown, long grain milled and parboiled rice, it's important to maintain a constant heat during the entire cooking period The rice doesn't get done if the heat is lowered too much and it sticks to the pan if the heat is raised too high. The heat should be lowered just enough to allow a small amount of steam to escape around the edge of the lid throughout the cooking period. Remember, one cup of brown rice equals about 2½ cups when cooked

Bicentennial theme planned for soil conservation meeting

ANKENY, IA - "Critical Conservation Choices: A Bicentennial Look" will be the theme of the 31st annual meeting of the Soil Conservation Society of America, August 1-4, 1976, in Minneapolis, Minnesota.

General session speakers on Monday, Tuesday, and Wednesday mornings will look at land and water conservation throughout our nation's history and the present state of the art in relation to increasing food and fiber production for America and the world in the years ahead.

Specific challenges of using the nation's land and water resources to meet these needs will be examined more closely in a series of concurrent technical sessions arranged by the Society's 10 resource conservation divisions.

The Society will name its Fellow and Honor Award winners for 1976 during the meeting, along with the recipients of two $1,200 Donald A. Williams Soil Conservation Scholarships and twenty $500 Gildea Scholarships in Conservation. The Heath Cooper Rigdon Conservation Writer and Newscaster Awards for 1976 will also be presented.

Official hosts for the event are members of the Society's Minnesota Chapter. Meeting activities will center in the Leamington Hotel in downtown Minneapolis.

William Larson, a soil scientist with the Agricultural Research Service, St. Paul, is the program chairman for the meeting. F. Maynard Scilley, state soil scientist with the Soil Conservation Service in Minnesota is in charge of local arrangements.

Winter was over, we thought, but the weather of the past week brought the snow back. Nevertheless, it didn't take long before most of it was melted and these sheep, on a pasture north of Lititz, wasted no time going back outside.

'Herfy' books successful

MASON CITY, NA — "Our Friend Herfy," has gone a long way in accomplishing the goal of making friends and being an educational tool to our urban friends to acquaint others with our way of life," is the description given by Mrs. Meneda Phifer of the Nebraska Hereford Auxiliary.

Less than a year ago, ladies of the Nebraska Hereford Auxiliary published two "Our Friend Herfy" books. One is a story book, the other an activity book. They tell and portray cattle raising and life in the country.

"The popularity of the books have excelled our wildest dreams. They have been bought by parents of youngsters, schools, churches, and other organizations for use in their educational programs. Order have come from all 50 states and five foreign countries," Mrs. Phifer added.

The books are now in their second printing. They sell for $3.00 for the two books, plus postage of 50 cents. Further information may be obtained from the Nebraska Hereford Auxiliary, Mason City, NA 68855.

Conservation group organizing

MANHEIM - Residents of the Chickies Creek Watershed are in the process of forming a watershed association to assist in conserving the natural resources of that stream, it has been announced.

The Big Chickies Creek, in its 40-mile trek to the Susquehanna River through portions of Lancaster and Lebanon Counties, has been subject to considerable flooding and controversy in recent years.

Soil and water conservation along the stream, as well as wise management of the watershed's resources, will be primary goals of the newly formed association.

The association, still in the organizational stage, is seeking residents of the watershed willing to serve on the board of directors, according to Mark F. Nestleroth, temporary chairman of the group. Any resident who is interested in serving is urged to attend a steering committee meeting to be held in the Ag Room of the Manheim Central High School, Thursday, March 25, at 7:30 p.m.

Directors will be elected from a salte of nominations at the association's first official meeting on April 8, 1976. Nominations will likewise be accepted from the floor at that meeting. Place will be the cafeteria of the Manheim High School at 7:30 p.m.

Any resident of the watershed are interested in conserving its natural resources is urged to become a member of the association and attend the first meeting on April 8.

The area of the Chickies Creek Watershed is defined as those lands drained or affected by the Chickies Creek, and areas of the flood plain, extending to the confluence of the creek with the Littel Chickies Creek, including all or part of the following boroughs and townships:

In Lancaster County - Manheim Borough; Rapho, Penn, Elizabeth, East Hempfield and West Hempfield townships.

In Lebanon County - Cornwall Borough; South Lebanon and West Cornwall Townships.

It was tentatively decided by the association's steering committee that 27 directors shall be elected from the membership. Three directors shall be elected at large from each of the following townships or boroughs: Manheim Borough, Penn Township, (South) Rapho Township, (North) Rapho Township, East Hempfield Township, West Hempfield Township, as well as three directors from the combined areas of Cornwall Borough, South Lebanon Township, West Cornwall Township and Elizabeth Township.

Representation on the board of directors, it was felt, should be based on the amount of total land area that the borough or township contained within the confines of the designated watershed.

In addition to the above elected directors from specific areas there will be six directors elected at large from the membership at its first meeting April 8.

Purpose of the nonprofit organization, as stated in the By-Laws drawn up by the steering committee, would be the following:

To promote the conservation of the natural resources of the Chickies Creek Watershed;

To conduct educational and scientific investigations and research related to natrual resources conservation within the bordering the Chikies Creek Watershed;

To disseminate information pertaining to the natural resources of the watershed to interested parties and the general public either without charge or at no profit to the Association;

To educate individuals and organizations in the value or stream controls and land activities;

To improve financial, technical and other assistance from federal, state and local sources to implement the Watershed's protection and development.

Stated objectives would be to study the resources of the watershed and develop a watershed management program; and to promote local interest in the problems on natural resources conservation in watershed and solicit local support for the programs developed to correct and alleviate the problem conditions.

Membership of the Association will be restricted to individuals residing in or organizations having headquarters within the designated boundaries of the watershed.

While voting membership is restricted to individual members, each with one vite, it was felt organizations may become affiliate members without voting rights.

Associate memberships in the association will be open to all interested parties with all rights and priviledges of resident members except voting rights and the right to hold office.

Like other watershed associations in the state, the Chickies Creek association will be strictly nonprofit. Its activities and projects will be supported primarily be membership dues and private contributions.

Forestry funding granted

The U.S. Department of Agriculture has announced 1976 funding for the Forestry Incentives Program (FIP) at the $15 million level authorized by Congress. The FIP is a continuing program designed to increase the production of timber products on small, private timber tracts, according to Paul H. Keeney, Chairman of Berks County Agricultural Stabilization and Conservation Committee.

In its third year of operation, FIP will again be available in designated counties with high resource potential for increased timber production. Both annual and long-term agreements will be offered to eligible owners of non-industrial private forest lands. Federal cost-sharing under these agreements will range from 50 to 75 percent of the cost of carrying out tree planting and timber stand improvement practices. All FIP agreements must be based on forest management plans developed by the local forester in cooperation with the landowner.

FIP is administered by the Agricultural Stabilization and Conservation Service, in consultation with the U.S. Forest Service and State Foresters.

Pennsylvania has received an allocation of $344,000 to continue the Forestry Incentives Program. Landowners with woodlots producing commercial timber or planning to plant timber specie trees are generally eligible for this program. Eligibility is limited to owners of woodlots of 500 acres or less. Timber processors, utilities, and municipalities are not eligible.

Interested farmers and woodlot owners may file their request for cost-sharing assistance at county ASCS offices. FIP cost-sharing approximates 75 percent of the cost of trees and planting, thinning, pruning, and other woodlot management practices in Pennsylvania.

Eligibility for participation in all programs administered by ASCS is established under law without regard to race, color, religion, sex or national origin.

Family farm spans 2 centuries

'Take what is best from the past, and build on that'

Editor's Note: This is the seventh in a continuing series of feature articles describing farms in southeastern-southcentral Pa. which have been in the same family for 100 or more years. It is LANCASTER FARMING'S way of recognizing and saluting agriculture - the foundation of civilization everywhere.

This week we feature Horace Grove's farms which were deeded to his ancestors more than 200 years ago.

By DIETER KRIEG

AIRVILLE - "As I have become older in life, I have come to feel more and more one of the tragedies of family life here in America is that, as the years pass, with the changes that come into the old home by children becoming older and marrying, and with opportunities arising that seem to offer an enlarged field of life and service, the descendants from our original family tree have gone out from the old fireside to found their new homes and in the common course of events have become so widely separated that they eventually have lost their contacts with each other. They have drifted so far apart that amid the rush of modern life, they may jostle one another by the wayside and fail to recognize themselves as kin, more or less remote, or perhaps they hear a name mentioned and feel that they must be related but because they have never met they hesitate to speak or make themselves known."

The words above are those of Thomas Grove Maughlin, written in a book he authored 25 years ago entitled: "Genealogy of the Maughlin Family in America." Deeply interested and fascinated by family history, the author searched high and low for records dating back more than four-hundred years. What follows is the story of the Maughlin-Grove families in southern York County and their farm which was deeded to them in 1770.

According to T. G. Maughlin, the Maughlins emigrated to America from Scotland by way of Ireland. Arriving in the western hemisphere during the mid-1700's many of them settled in "Lancaster County" - which, by the way, included York County at that time.

The ancestors of the Horace Grove family, who now live and work on the property, settled in what was then known as the "Barrens" which included most of the land in southeastern York County. Maughlin points out in his 76-page research work that the name of the region did not stem from any meaning of infertility, but rather because "the country had been so devastated and burned over by the Indians in pursuit of wild game."

The original Maughlin farm, which in more recent years has been known by the Grove family name due to a Maughlin daughter marrying a Grove, ecompassed 408 acres of rugged farm land. Some portions of the original property have been sold off over the years, although Horace Grove and his son, W. Donald, have retained or re-acquired possession of much of the original land. The younger Grove and his wife live in a 150-year old home, part of which was a log house at one time, while his father and mother live in a house which is also well over 100 years old.

Horace Grove and his wife, Annetta, represent the second generation of Groves to own and operate a farm which has been in the same family for more than 200 years. Grove's father, William, married a Maughlin daughter, Mary, under whose family name the farm had been known for more than 100 years.

A Bicentennial Feature

Asked what might have been the biggest problems faced by early stewarts of the land in southern York County, Donald answered: "rocks and stumps." The rolling hills are infested with rocks and much of it is still forested. Clearing it must have been a tough job, the veteran farmer admitted.

But clearing the land wasn't the only difficult task faced by pioneer settlers. In seemed to fear facing the difficult problems of the early settler, and the Indian problems as they arose in the early settlements." Donald adds that he still continues to find arrowheads around a spring on the farm.

The family historian's account continues:

"It is probable that a large part of this land was still covered with virgin forest at the time he (William Maughlin) first acquired it (the farm now owned by Horace Grove), for in 1779 he was assessed for 150 acres, three horses and six head of cattle. This, I think, would Maughlin in 1813, his land was divided up among heirs and the values of those properties were as follows: A 125- acre tract valued at $880; 150 acres valued at $525; 133 acres, 80 perches, at $534.

A rather unusual fact about farming 100 years ago was pointed up by Donald. He noted that the common thing to do in this area, at least, was to allow livestock to roam freely while fencing fields in. The practice was changed by his grandfather he said, and it wasn't long before the entire neighborhood followed suit.

Grove also pointed out that the layouts of fields have changed. At first they w small, then, as farm advanced considerably to mechanization, fi were consolidat Nowadays the trend towards smaller fields a in order to avoid soil eros

With their farms loca more than 100 miles a from Philadelphia and

[Continued on Page 55]

Interest rates cut

Interest rates will be lowered to 8½ percent on Federal Land Bank agricultural and rural residence loans, effective April 1, 1976, Carl Brown, general manager of the Lancaster Federal Land Bank Assocation announced recently.

Brown says the reduced 8½ percent interest rate will apply to new Federal Land Bank loans and also to existing loans written under 30-day notice variable interest rate contracts. Thecurrent interest rate for long term loans is nine percent.

The reduced rate reflects the Bank's policy of charging the lowest interest rate possible in line with the average cost of money and operating overhead, according to Brown. Since the introduction of the variable interest concept, interest rates have varied between 7½ percent and nine percent.

"This interest rate reduction permitted by the variable rate contracts proves that the system works to the advantage of borrowers by giving them the benefit of rate reductions which are made possible when the money market loosens," Brown explains.

The Pennsylvania Federal Land Bank Associations provide long term financing for agricultural and rural residence purposes throughout the entire state.

Bicentennial farm

[Continued from Page 54]

proximately 50 from Baltimore, early tillers of York County soil had another major hurdle to clear: transporting their goods to where the population was. The Susquehanna River and an adjacent canal took care of part of the problem. Later, during the mid 1800's the area received railroad service. But in either case the farmer had to rely on his own horse and wagon to get to either the river or railroad depot. Most rail freight was loaded at Muddy Creek Forks, approximately 8 miles to the west.

Thomas Grove Maughlin, evidently highly appreciative of his ancestors, and inspired by their dedication, courage, and service, concluded his Family narration with the following words:

"Three score years have gone by since I heard my father's voice. Many of the lessons that I was then too young to learn and appreciate have been learned in the hard school of experience. Paul Kruger once said: 'Take what is best from the past, and build on that.' Yet one generation passes away and in a few years they are forgotten. Is it possible for us today to go back into the days of our fathers and mothers and catch something of their dreams and inspirations and build on them?"

Donald Grove and his wife, Yetta, study the pages of a family history book which was compiled by Donald's uncle, the late Thomas Grove Maughlin, 25 years ago.

ATTENTION: Cattlemen

If you're relying more on grain silage

Feed Bovotone 12-D

If you're like most cattlemen, you'll be counting on silage this year to keep feed costs down. But keep in mind, grain and silage rations are generally low in major minerals and trace minerals making proper supplementation a must.

That's why it's more important than ever to feed Bovotone 12-D from Vigortone. Bovotone 12-D makes up for nutritional deficiencies present when high levels of silage are fed, promotes better feed conversion and maintains maximum feed intake. During periods of stress, feed Bovotone 12-D + A and D.

If you're relying more on silage this year, feed Bovotone 12-D. It's safe, economical and easy to use.

Vigortone pre-mix meter — for automated feed handling systems

Vigortone has a new metering device that is reliable, accurate and simple to install. Just set the timer and calibrate the meter for the desired amount of pre-mix per minute. Automatically, your pre-mix is metered into your grain, silage or haylage at the required levels.

For the best in cattle nutrition . . .

Your Vigortone serviceman has a complete line of cattle pre-mixes and animal health products to improve the efficiency of your feeding operations. See him soon, or return the coupon below.

Learn why more cattlemen are feeding Vigortone — especially now.

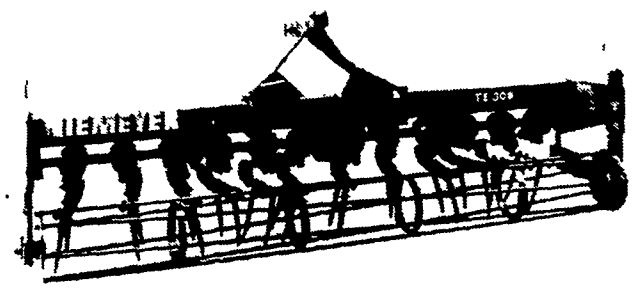
What's New



Power Harrow - A New Dimension in Secondary Tilling

WESTWOOD, N.J. - KMN Modern Farm Equipment, Inc. has announced the introduction of its Niemeyer Power Harrow Tillage Tool. The "Breakthrough" design enables the harrow to prepare perfect seedbeds, reduce compaction, conserve moisture, allow chemical incorporation and give superb crop starts while reducing the number of tillage trips. A 3-point linkage machine, it is driven by 540 rpm or 100 rpm PTO and has working widths from 8 ft. to 15 ft. Power requirements range from 60 hp to 150 hp dependent upon size of machine. The tumbling-turning movement of the tines allows the unit to work effectively in difficult soil conditions without subjecting it to excessive shock or vibration. Basicly, a secondary tillage tool, it can be used for seedbed preparation, pasture breakup, stubble incorporation and fertilizer and chemical mixing.

For more information, contact William Bayersdorfer, General Manager, KMN Modern Farm Equipment, Inc., 12 Sullivan Street, Westwood, New Jersey 007675 (201) 666-3707.

Feeding Station Box

A new, metal, tamper-proof rodent feeding station protection box is being marketed by J. T. Eaton and Co., Inc. Fabricated of 23 gauge galvanized metal, the protection box with snap lid may be sealed with high strength, one-way nylon ties to protect against tampering and to provide safety for children, pets, and domestic animals. The top is stamped in large, legible, letters: POISON - DO NOT TOUCH. TOUCH.

EPA label requirements now state: "Baits should be placed in areas inassessible to children, pets, wildlife and domestic animals of in tamper proof bait boxes." The Eaton box meets these requirements. Designed for indoor or outdoor use, the 8½" x 10" x 3¼", two pound rust-resistant unit is made for years of use. The exterior consists of a stamped, one-piece, seamless base, covered with a fitted, overhanging lid to help prevent contamination of the bait by the elements or seepage. Inside is a 1¼" deep plastic bait tray form-fitted to the base. The sturdy tray is removable for cleaning and refilling, yet inexpensive enough to be disposable. Its compartmented design allows the use of dry and liquid baits, or either bait alone. Rodents will find easy access to the privacy of the bait chamber through the 2-⅛" diameter entrance holes in both ends, and will make this a popular feeding station.

The Eaton protection box comes with galvanized base and lid, plastic bait tray, and four nylon security ties per unit.

Priced at $4.95 postpaid, the Eaton protection box is available direct from J. T. Eaton and Co., Inc., 10311 Meech Ave., Cleveland, Ohio 44105.

New Beef Cattle Feeds

Officials of Pennfield Feeds have announced the availability and FDA approval of two new beef cattle formulations No. 726 40 percent Concentrate and No. 746 silage balancer. Both formulations contain a unique, new high efficiency additive which will reduce feed consumption by 10.6 percent while maintaining normal growth and maintenance in beef cattle raised on the new Pennfield rations.

The big difference between Pennfield's new No. 726 and No. 746 formulations and traditional beef cattle feeds is in the effect of the new formulations on the microbial digestive process in the rumen of beef cattle. The Pennfield formulations work to increase the efficiency of the rumen in converting protein into usable energy for growth and maintenance.

Because an animal rais on Pennfield No. 726 or N 746 does convert his feed energy more efficiently, a because the animal has natural "triggerin mechanism" which tells it stop eating when it h generated the optimu amount of energy for norm growth ... the cattle e less. About 10.6 percent les

Throughout the extensiv testing of Pennfield No. 7 and Pennfield No. 746, ther has been absolutely n evidence of stress in the te animals. And, there is n need for withdrawal prior t marketing.

Also, the testing has i dicated consistent savin from all types of catt raised on the new fo mulations ... steer heifers, yearlings purebreds, and cross-bred

Maryland calls for Johnsongrass control

ANNAPOLIS, Md. - Spring 1976 in Maryland sees an expanded and strengthened Johnsongrass Control Program underway for 18 counties in a cooperative Farmer-County-Maryland Department of Agriculture effort to check and eventually beat back the costly weed pest.

A feature of the program statewide this year is a new agreement to be signed by tenants and landowners and MDA designated officals for control of Johnsongrass on their properties.

Under terms of the state's 1969 law which declared Johnsongrass a noxious weed, it is illegal to let any of it set seed or be transported. There were no permitted exceptions and thus, everytime the weed went to seed, the landowner or tenant farmer was in technical violation of the law.

The law was amended in 1975 to allow for technical exceptions provided that a control agreement was signed and all parties thereto were following the terms of a specific control plan for the particular property involved.

"The new agreement is binding and spells out what will be done," says Jesse Crook, MDA's Weed Control Supervisor, "But it allows the farmer or landowner more breathing room because it is a more workable law. However, it also means that those who don't comply can be dealt with quicker and in a more direct manner."

The new agreement program, which is now coded to the ASCS aerial mapping system, details each farm, the fields involved, the degree of known infestation, lists previous treatment methods, previous crops and will record the agreed upon new treatment methods.

This is necessary because a control program can involve different combinations of crops, types of herbicides and application methods for the herbicides.

Farmers with questions about the new law and new forms are urged to contact their county Johnsongrass control personnel. Funds to pay the public share of the program come from the county involved and the state through MDA. Farmers who have application work done by county personnel are billed on a cost basis.

Johnsongrass is a "robber weed" in that it chokes out valuable crops such as corn and soybeans. Its deep ever-hungry root system captures fertilizer and water quickly and if allowed to grow to amturity, the plants can clog and jam harvesting implements. Its cost to Maryland farmers in terms of crop loss and reduced yields is estimated at $3.3 million annually.

It is a highly difficult weed to control and eradicate in that it spreads both by seeds (which can remain viable for as long as 10 years) and by rhizomes on its deep root system. Plants can regenerate after apparently being killed on the surface because the rhizomes send up new strong shoots.

Johnsongrass like the majority of farmer plaguing weed and insect pests in America, is not a native - it is belived to have been imported about a century ago and since has spread through ignorance and carelessness.

Modern science has come up with a number of chemical control methods. Some chemicals kill the plant by "translocation" that is, being absorbed by the plant's leaves and taken into the root and rhizomes system where it actually kills the entire plant. Other chemicals kill the sprouting seed and emergence in the spring. Still others are used to spot treat smaller infestations by chemically burning the plant's leaves preventing the plant from forming seeds. However, the latter method does not deal effectively with the rhizome system and is only a temporary control method.

Proper tillage practices, are essential in a Johnsongrass control program.

Farmers and landowners with questions about the program should contact their county Johnsongrass supervisor. A good reference detailing control methods, Agronomy Mimeo Number 65, "How to Control Johnsongrass", may be obtained from county Johnsongrass supervisors or Extension Agents for the asking.

At the present time there are 18 counties with active Johnsongrass control committees and programs. The state's two westermost counties, Garrett and Allegany, have no problem with the weed. There is no program in Prince Georges County. Programs for control are being developed for Harford and Washington Counties.

It is estimated that approximately 66,000 acres in Maryland are "infested" with Johnsongrass and over 90 percent of this acreage has been brought under control agreements.

WAYNE ANNOUNCES THE 40

Now each sow gives her pigs iron anemia deficiency protection when she's fed new Wayne Brood 'N Iron. She becomes your "needle," giving needed iron to all her pigs before they're born.

The Brood 'N Iron-fed sow starts giving pigs her iron-rich blood before they're farrowed. In fact, her pigs are born with a reserve of iron stored in their livers.

And that's not all. Because with Brood 'N Iron, baby pigs also get extra iron every time they hit the nipple. Your sow provides the easiest iron shot you've ever given.

Research tests show how you can gain with exciting, new Wayne Brood 'N Iron.

- Consistently high hemoglobin levels in baby pigs, even without iron injections
- Tests show two-tenths of a pound heavier birth weights. In fac as shown by the chart below, litter receiving Brood 'N Iron are six-tent of a pound heavier at three weeks.

		PIG WEIGHT BIRTH	3 WEEKS
Regular Iron in Sow's Diet	Pigs Injected	2.86	10.6
BROOD'N IRON In Sow's Diet	No Injection	3.06	11.2
	Increase	0.2	0.6

That's five pounds or more per norm litter. Such a fast start is well wort reaching for . . . especially when yo no longer have the bother and haza of giving iron shots.

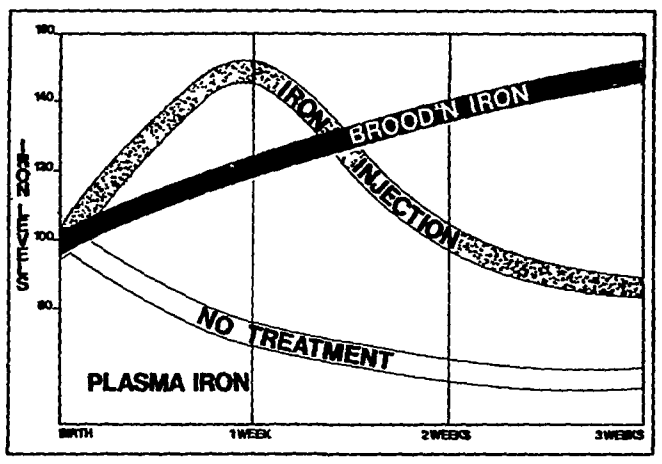
B. IRON SHOT

BROOD 'N IRON

PATENT PENDING TM

• There's an increase in liver storage of iron in baby pigs at birth.

• Iron levels in the blood plasma are increased in both sows and pigs.



This graph shows that as Brood 'N Iron enriches the sow's milk, iron levels in the plasma climb instead of declining as with a single iron shot.

• Sow's milk has increased iron content. This increase peaks when young pigs are in greatest need of extra vitality to resist disease and maintain rapid growth.

Brood 'N Iron is easy to feed, too — from 30 days before, through 2 weeks after farrowing. Available in a new complete sow feed . . . Wayne Brood 'N Breed™. This way, your sows become 400-lb. iron shots. Just ask your Wayne Feed dealer for new Wayne Brood 'N Breed. Dramatic new product from the leader in swine nutrition.

Miss Pennsylvania to visit with poultry producers

Miss Pennsylvania, Connie Harness, will be in attendance at the Pennsylvania Poultry Federation's Annual Fund Raising Banquet at the Host Farm in Lancaster on April 1, 1976. Miss Pennsylvania joins another special guest at the gala banquet, the Honorable Raymond Kerstetter, Pennsylvania's new Secretary of Agriculture. In addition, Pennsylvania Poultry Queen, Dawn Heisler, from Tamaqua, will be on hand. All three will briefly address the large crowd in attendance prior to the entertainment.

Miss Pennsylvania is a resident of Mechanicsburg, and a 1972 graduate of Cumberland Valley High School. She attended Messiah College in Gratham, and the Harrisburg Area Community College. Miss Harness would like to pursue vocal training at the Julliard School of Music. She sang "Romance" from the musical "The Desert Song" as her talent presentation at the Miss America Pageant in Atlantic City, New Jersey.

MISS PENNSYLVANIA

The Annual Fund Raising Banquet is the principal means of support for the industry's state-wide trade association. The gala social evening attracts producers and suppliers from all over the United States and has necessitated moving to a facility that has a seating capacity of eleven hundred. However, Bill Carlin, president of the Pennsylvania Poultry Federation, indicated that based on ticket sales to date for this year, the Federation may have to plan on two separate banquet halls for next year followed by bringing the groups together for the entertainment portion of the evening. Mr. Carlin continued that this may be the last year that the entire group can be seated in one area, but the separate banquet hall concept is similar to that being used by many of the poultry associations in the South. Tickets to the affair are being sold by 55 industrymen throughout Pennsylvania. For further information regarding tickets, contact the Pennsylvania Poultry Federation, 3807 Paxton Street, Harrisburg, PA 17111.

Entertainers named for poultry dinner

Bob Lewis and Ginny will provide part of the entertainment at the Pennsylvania Poultry Federation's Annual Fund Raising Banquet on April 1, 1976, at the Host Farm in Lancaster. The husband and wife duo were the favorites of the long-running Ed Sullivan television variety hour having appeared there more often than any other performer.

The Annual Fund Raising Banquet is the principal means of support in addition to memberships for the state-wide trade association. Tickets are being sold by 55 industrymen and Allied industrymen throughout Pennsylvania. Present participants would make a Who's Who In the Poultry Industry by itself.

...S CITY, Mo. — Dr. ... Voepel, General ... of Chemagro ...ural Division of ... Chemical Cor..., recently an...three key personnel ...tments within ...o and its Canadian ...ary Chemagro ...

... new Director of ...g for Chemagro is ... Wehner. Wehner ... Stan Adams, who ...me the position of ...nt and General ...r of Chemagro ... in Canada. Dieter ...lber, formerly ... Manager of ...ro Limited, has ...d a post with the ...ompany, Bayer AG, ...es Manager for ...n Europe of the ...ltural Chemical ... of Bayer.

...ER BRINGS SOLID ...EM BACKGROUND ...O NEW POST

... to his appointment ...magro Director of ...ng, Wehner served 5 years as Executive Vice President and Director of Agriculture Chemicals for Bayer de Mexico S.A., Central American affiliate of the giant chemical manufacturer Bayer AG, Leverkusen, West Germany.

Wehner first joined the Bayer Organization in 1951 when he began working for Bayer Quimicas Unidas S.A. in Lima, Peru, where he attained the position of Divisional Manager of Pesticides prior to leaving that affiliate in 1971.

The 45-year old Wehner, who holds a degree in business administration, will assume his new responsibilities with Chemagro early in March.

ADAMS A 21-YEAR CHEMAGRO VETERAN

Stan L. Adams, newly appointed President and General Manager of Chemagro Limited, first joined Chemagro in 1955 when it was known as the Pittsburgh Coke and Chemical Company. Since that time, Adams has held a variety of positions within Chemagro, ranging from field salesman, regional and field sales manager, and general sales manager. From 1967 to January, 1976, Adams served as Chemagro Vice President in charge of Marketing.

The 47-year old Adams holds a Bachelors of Science degree in agronomy from the University of Arkansas and is a graduate of the Executive Program of the Stanford School of Business.

RAPPSILBER RETURNS TO GERMANY WITH VAST INTERNATIONAL EXPERIENCE

In 1958, Dieter Rappsilber joined the Bayer organization as a Management Trainee in the Crop Protection Department in Leverkusen, West Germany. Now, more than 18 years — and 4 countries later — he is returning to Germany as Sales Manager for Western Europe of the Agricultural Chemical Division of Bayer AG.

Rappsilber's first overseas assignment was with Scope, Ltd., a subsidiary of Bayer Agro-Chem in South Africa. He moved to England in 1968 as Manager of Bayer Agro-Chem's Household and Hygiene Division. Then, in 1971, Rappsilber was appointed Vice President for Corporate Development of Helena Chemical Company, headquartered in Memphis, Tenn. From March of 1974, to January of 1976, he served as General Manager of Chemagro Limited.

CHEMAGRO; BASIC AGRICULTURAL CHEMICAL MANUFACTURER

Chemagro is a basic manufacturer of agricultural chemicals, with national marketing, research and manufacturing headquarters in Kansas City, Missouri. Chemagro pioneered the development and discovery of selective and systemic crop protection chemicals, and today stands as one of the largest and most diverse of all American agricultural chemical suppliers.

Egg producer named conservation leader

Harry R. Ulrich, Hummelstown R2, was recently appointed a member of the Pennsylvania State Agricultural Stabilization and Conservation Committee by Earl L. Butz, Secretary of Agriculture. USDA.

Mr. Ulrich and his wife Kathleen were poultry and egg producers for 25 years in the Hummelstown - Harrisburg area. During peak poultry years, the Ulrichs produced and marketed the eggs from 50,000 hens. All eggs were sold retail or wholesaled to retail stores, restaurants, and bakeries in the Harrisburg area. In 1974, the Ulrichs sold part of their farms and discontinued the poultry business to lead a little slower pace. They currently have a 140 acre farm producing grain and other crops.

Harry, who is 59, has led a very active life in promoting agriculture in his community in addition to his poultry operations. Mr. Ulrich received his BS in Dairy Husbandry from the Pennsylvania State University in 1940, served in the Army Air Force during World War II, and instructed veterans in the Veterans Farm Training Program. Mr. Ulrich is a Pennsylvania Master Farmer, has held offices in the Pennsylvania Poultry Federation, and is a recipient of the "Blue Rooster Award" from the Poultry and Egg National Board. He is an agricultural trustee of the Pennsylvania State University and has served on the Pennsylvania State University Agricultural Advisory Council. He is a member of the Gamma Sigma Delta, Honor Society of Agriculture, and is listed in Who's Who in the East, 12th edition. Mr. Ulrich is a member of the Pennsylvania Farmers Association and has served on the State Board and has also been President, Secretary, and Treasurer of the Dauphin County Farmers Association. He is past President of the Pennsylvania State Council of Farm Organizations, serves on the Board of Directors of the Pennsylvania Young Farmers Foundation, and was 1973 "Poultryman of the Year" in Pennsylvania. Mr. Ulrich is a life member of the Penn State Alumni Association, member of American Legion Post No. 272, member of Masonic bodies, member of the Paxton United Methodist Church, and the Grantville Volunteer Fire Company.

Mr. Ulrich will serve with State Committee members Claude Hetherington and William Ringler. The state Committee is charged with the overall administration of Agricultural Stabilization and Conservation Service programs in Pennsylvania.

THE GOOD WORD from the Bible

For the lowliest man may be pardoned in mercy, but mighty men will be tested. For the Lord of all will not stand in awe of anyone, nor show deference to greatness; because he himself made both small and great, and he takes thought for all alike.

Animal waste

[Continued from Page 1]

"The red clay hills of Georgia aren't conducive to growing corn and grains why in fact we could use Pa. soil for fertilizer," Hay quipped.

The Georgia cattleman, who had previously been a dairy producer, noted that when he began raising steers he realized that feed prices would never be conducive for obtaining profits. Cattlemen in the south must buy large quantities of corn and grains which pushes production costs sky high. Reflecting on the problem, Hay realized that he was probably throwing away a lot of potential protein which could be recycled and thus struck upon the ideas of using cattle waste for feed.

Along with the help of Dr. W. B. Anthony, of Auburn University, Hay began to research a plan to utilize cattle wastes in a feeding program. While the major feedlots in the west had tried the idea, it was relatively new in the south five years ago.

Hay explained his personal operation by telling the audience that he buys calves at 400 pounds and grows them to 700 pounds by feeding corn and grazing the cattle. At 700 pounds the calves are brought into confinement and until market weight are fed a ration of ensiled manure, corn silage and cracked corn.

Hay's formula has taken on the proportions of 40 percent direct solid manure, 15 percent corn silage and 45 percent cracked shelled corn. The mixture is ensiled for a minimum of 14 days to treat the waste products against putrification. Following the ensiling period, the top nutrients gained include 12-14 percent protein, 70 percent total digestible nutrients and 68.5 percent net energy in therms. "No additional protein is added to the feed," Hay explained, "and the average per cow per day gain has been averaging 2.6 pounds per day."

"Animal waste is a valuable resource too long rejected by taboos," Hay added, "with its potential for feed at low cost it can be useful in a program."

Hay credits Anthony with the research success for the program and explained one experiment the Auburn researcher did to validify the weight gains by steers.

Hay told the cattlemen that Anthony had formulated varying rations to feed growing cattle. A basal ration consisted of 82 percent corn, 12 percent hay and the balance being supplements. For two months four groups of cattle were fed the rations with the following results:

Cattle on the complete basal ration gained 2.63 pounds per day. Those on an 80 percent basal ration with 20 percent manure gained 2.83 pounds per day; cattle on a 60 percent basal ration and a 40 percent manure base gained 2.92 pounds per day and those on a 40 percent basal ration and a 60 percent manure base gained about 2.95 pounds per day eating 24 percent less food.

Hay noted that the test further showed no signs in differing carcass compositions and during taste tests at Auburn panelists found the manure fed cattle to have a better flavored meat.

Sporting a smug grin, Hay explained that many people like to find problems with the waste feeding program but he firmly believes that it is easy, profitable and good for weight gain. "We have had no reproductive problems or calving problems, as some people rumor the case to be," he noted, "the evidence of research proves the method is good for weight gain and general health."

Hay manufactures his feed twice per week so that the manure will not spoil. In his operation, the waste is scraped and put into an auger where it is mixed with the corn silage and cracked shelled corn. The feed is put on bunk units for the cattle on confinement and also pasture. Once it is ensiled the feed can be stored for long periods but manure alone must be used not longer than five days after it is dropped.

While Hay's feeding method has been used as an alternative to the problems encountered in the South, using manure rations in the North has its own peculiar problems. Summer weather poses no problems for making feed in the northern states, but winter freezing could cause serious difficulties for cattlemen. A long term storage program was suggested by Hay as a way to work around the freezing of manure.

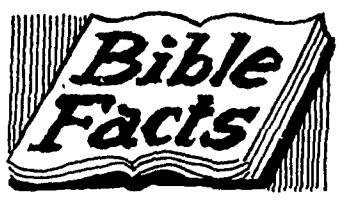
Although the Georgia Cattleman has used primarily steer manure for his feed base, several other producers in the south and especially his home state have turned toward poultry manure as a source of protein.

Many farmers in that section of the country are using a ration of 46 percent layer manure, 44 percent corn and 10 percent wheat straw which is ensiled.

The poultry waste however has caused many problems especially for dairymen as the antibiotics found in the chicken waste can be transmitted to the milk. Hen manure is high in protein but also high in calcium which can be harmful to dairy cows.

"Caution must be used when developing a ration with chicken manure," Hay noted, "there can be many consequences."

The southern gentleman is convinced that for his operation, recycled animal waste has been good for profit. And while it may not be the answer in our part of the country, feeding a manure and corn silage ration may help producers strapped by poor soil for growing agricultural crops.



"You must be ready to wash one another's feet," Jesus told his disciples as he finished washing their feet. He said: "The servant is not greater than his master and the messenger is not greater than the man who sent him." This lesson by Jesus about serving one another is one we should heed now.

People have found identity, meaning, and purpose for living in Jesus Christ. They can "see" themselves for what they really are by "seeing" Jesus. He is their mirror.

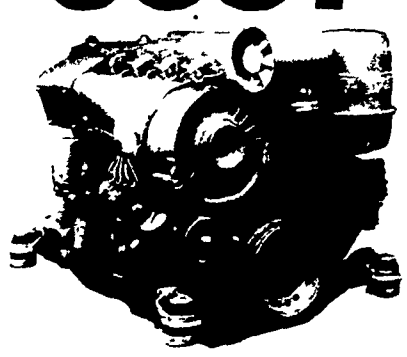
COST



CUTTER

The cost of diesel fuel has jumped nearly 70 percent since October, 1973 and it's still about three cents a gallon cheaper than gasoline. Higher fuel costs call for a closer look at total operating costs when you buy engines. Deutz air-cooled engines use 20 to 40 percent less fuel than most water-cooled diesel engines - far less than gasoline engines. And they are competitively priced. So hadn't you better buy or specify the cost cutter - Deutz? 10 to 500 bhp.

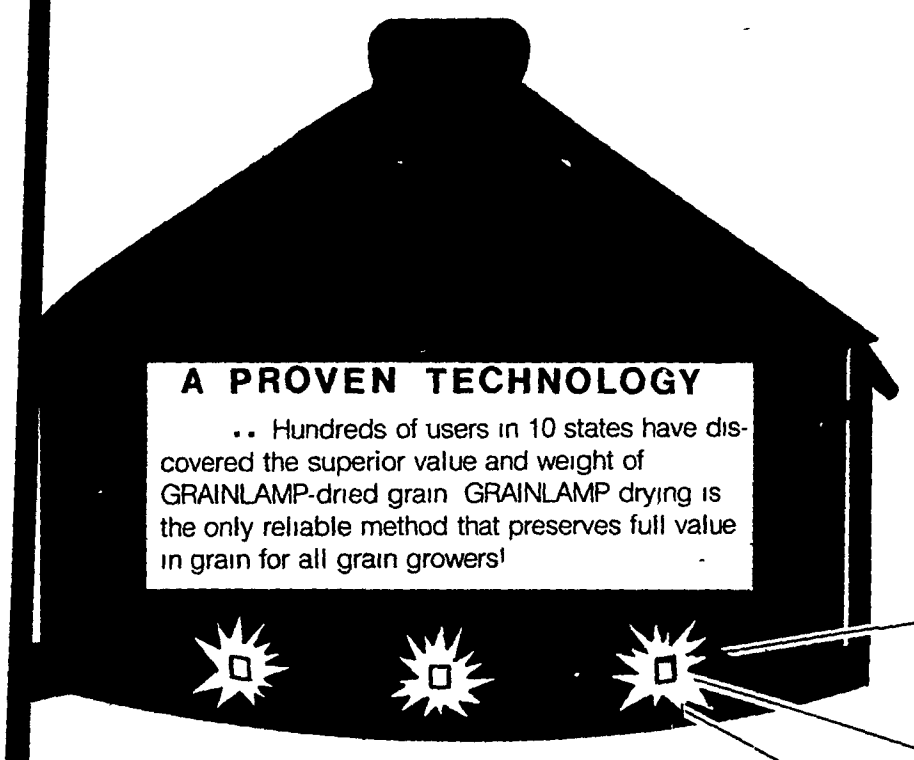
THE Harvestall®

GRAIN STORAGE SYSTEM.

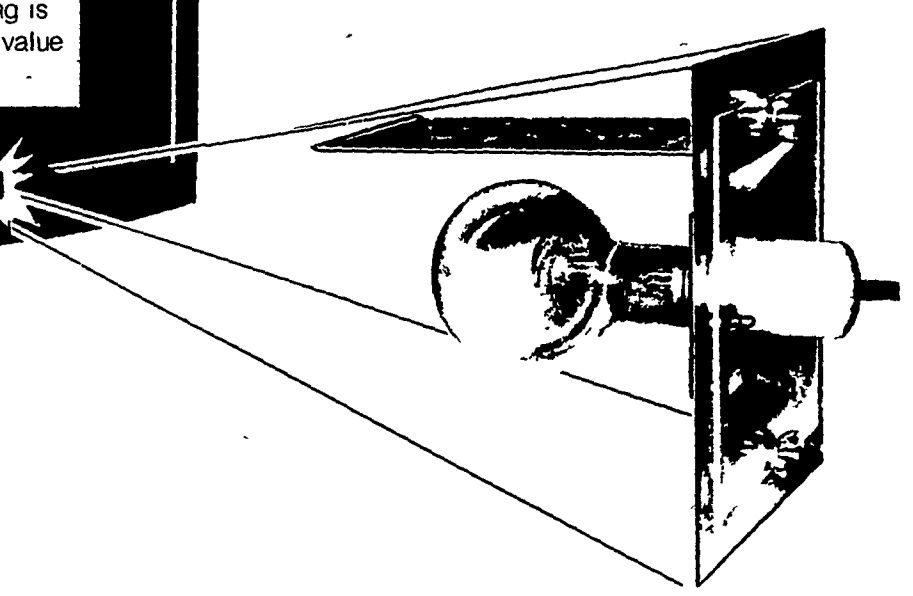
...a better way!

Seeds are fully preserved only when they are made dormant ...the only system that "cool-dries" grain and maintains dormancy from moment of harvest.



A PROVEN TECHNOLOGY

.. Hundreds of users in 10 states have discovered the superior value and weight of GRAINLAMP-dried grain GRAINLAMP drying is the only reliable method that preserves full value in grain for all grain growers!



Harvestall®

Saves Energy ... Costs as little as **3-5¢** per bushel.

Increases corn weights ... Get up to 10% more grain by weight from your bin.

Preserves corn quality ... controlled natural curing with GRAINLAMPS doesn't vaporize kernel ingredients, doesn't deteriorate starch quality See GRAINLAMP dried corn and see the difference Better than cribbed corn! Better feeding results.

Non-stop harvest. The GRAINLAMP system eliminates batch-drying bottlenecks at harvest-time Non-stop filling like a corn-crib For the big producer and the small grower

PRESERVE GRAIN ... IT'S FOOD

Mold infestation and fermentation mean costly destruction of valuable food . so does burning up grain energy with heated-air drying

Grain-death is decomposition Decomposed grain has lost weight, has lost food value! Whether fermented or heated, grain energy is burned out That is called shrink! In grain that is fed, shrink is a double cost — 5% shrink is 10% out-of-the-pocket expense GRAINLAMP grain-care alone preserves seed-perfect, energy-rich grain Make your move against inflation — on your own farm — where it counts!

Mr. Robert D. Miller
Penn Bangor, Inc.
Bangor, PA 18013

Dear Sir

This past summer after inquiring about grain drying systems, we were contacted by a Penn Bangor, Inc. representative, Mr. Peter Warg After several contacts for information and comparing other systems we believe we chose wisely in a HARVESTALL Grainlamp Dryer System.

Now the system is completed and operational as professed by its manufacturers, having efficiently lowered the grain moisture.

As an intermediary between we as customers and your organization, we give high praise to Mr. Wargs dedication and perseverance not only to sell but to get the best workable installation for our satisfaction . . .

We believe as local "doubting Thomases" see that this system is functional, we will be able to give referrals to Penn Bangor for Mr. Wargs follow-up.

Sincerely,
Russell L. Hummel & Sons
Russell Hummel & Sons

RH/PH

Russell Hummel expresses confidence in his new 13000 bushel Harvestall system.

- moisture in grain at filling.....26%
- moisture removed.....12 pts.
- cost for removal of moisture 4.7¢/bu. (based on 3.0¢/k.w. rate)

Dissatisfied farmer

[Continued from Page 1]

wouldn't be farming if he couldn't belong to the NFO; and if he ever quit farming he'd want to work for that organization full time - something he has already done at one time. Bitterly opposed to dairy cooperatives and fiercely loyal to the NFO, Stanford believes farmers are being shortchanged at just about every turn. But in spite of his dissatisfactions as far as prices and bargaining power are concerned, he stays in business - preferring farm life to other ways of making a living. He even has a "I'm Proud To Be A Farmer" sticker displayed on the premises.

A farmer all his life, Stanford is convinced that power is the only base from which to bargain for higher prices. "That time when dairymen went to Washington to publicize their problems (Nov. 74) was collective begging, not collective bargaining," he exclaimed. Favoring a unified farmer system very similar to big labor unions, Stanford is much more defensive and envious of labor's accomplishments than he is critical of them. In his view, big business is the "evil" within our economy, not organized labor.

Stanford was not always a dedicated follower of NFO thinking. While employed on his late father's dairy farm near Chester Springs (Chester County), he eventually took over managerial responsibilities and one of his decisions was to drop membership in the dairy cooperative. That came about as a result of an alleged "lie," as Stanford describes it, by a representative of the cooperative. Bitter feelings followed and to this day he is personally convinced (and tries to convince others) that dairy cooperatives "lie" to their members all the-time.

The experience of approximately 10 years ago left him with a feeling that all farm organizations are phony. He felt that way about NFO too when a recruiter stopped by to see him. However, later, after he had taken time to study the literature which was given to him, he decided that NFO was the one and only group which could and would stand up for farmers. He joined in 1967 and has been preaching their gospel ever since.

Not everyone agrees with Stanford or the NFO. In York County, for example, the membership is too low to be organized. One of his neighbord Fred Kimmel, stopped in during this reporter's visit to the Stanford farm, and he failed to see eye to eye with Stanford after three years of association with him. The pair agreed on some issues, but not sufficiently for Kimmel to sign up as a member. As Kimmel sees the dairy situation, a price based on an 85 per cent parity level would be more in line with the costs of production, rather than the 100 per cent figure demanded by Stanford. He explains that the price of milk, if taken separately, is sufficient as it is, but it has to pay for losses encountered elsewhere in the farming operation, particularly low prices for cull cattle and veal calves. He also noted that when repair of equipment costs are considered, it takes many more 100 pounds of milk nowadays to pay for those items than what was true just a few years ago.

"Too many farmers are losing their pride today because they can't pay their bills on time, and that's a sad way to lose pride," Kimmel observed. He was paid $10.94 per hundredweight according to figures on his most recent milk check and adds: "it would be enough if other inflationary aspects were in line with costs."

Stanford, a dairyman who markets his milk through the NFO, is receiving a lower price for his milk than he could get through other outlets. But that dosen't bother him. The point, he says, is not to go out for a price which is 10 cents higher than your neighbor's but to support a cause which will lead to higher prices for all. He's with NFO to strengthen membership, and claims that it's the NFO which has made better paying prices possible for all dairymen across the country. Asked how much the NFO influences dairy pricing through its alleged efforts in the Minnesota-Wisconsin area, Stanford flatly states "by two dollars per hundredweight." In other words, according to Stanford, if the NFO ceased to exist, dairy prices would fall by two dollars. "I doubt that the Class I price would be $9.00 without NFO's efforts," he said confidently. Another advantage he cited was that his butterfat test is supposedly higher with NFO. "I'll bet 10 to 1 on that," he announced.

Aside from his personal reasons for loathing dairy cooperatives, Stanford proclaims:

"Generally, over the past 20 years, milk cooperatives have done a lousy job of helping dairy farmers. They control 75 per cent or more of the milk production in the country - if they control that much, then why can't they control prices?" He charges that the bureaucracy within cooperatives and some other farm organizations is feeding on itself. Their interests are not necessarily for the good of the farmer, as far as Stanford is concerned. Some changes he'd like to see are:

Tying cooperative managers' salaries to the price of milk and restructuring truck routes to elimate duplication and cut down on costs.

"Why won't the cooperatives release what the costs of production are?" Stanford asked, then answering his own question in these words: "I'm sure it's because they wan't to keep the farmers pacified. They're using the argument that higher prices will cut consumption and that more farmers will be encouraged to go into milk production if prices go too high. As far as I'm concerned we need more of 'em," he exclaimed.

Continuing his presentation of why he is a dissatisfied farmer, Stanford charged that farmers have been forced to add more cows to meet production costs. He figures that's not the way it should be, even with modern innovations making it easier for a man to handle more cows. He's now milking 45 cows twice a day with the part-time help of four of his five children and says he'd like to milk even less. He is a victim of hemophilia and has leg problems. Milking is done in a double-three herringbone parlor. The herd is housed in an attached free-stall barn

[Continued on Page 65]

Leland Stanford and his wife, Judy, are dissatisfied with prices farmers receive for their products. They have five children: Todd on his father's lap, twins Kit and Kim, and Lee and Jill, foreground. The family operates a 94 acre farm with 65 head of Holsteins in northern York County.

ncludes feeding

rices, not high cause over- ion, Stanford d. His reasoning t statement is that s force farmers to cows to their herds o meet production prices were high o start with, herds t have to be ex- Since 1950 the price s been less than the production, and ve had to increase in size ever since," he argued.

The controversial dairyman, who at one time had farmed in Lancaster County as well as Chester County, is fearful that big business will eventually take over America's agriculture if the family farm is not preserved. He considers the NFO to be the "savior" in this case.

Stanford favors a farmers' fraternity which would be all-inclusive. Grain, beef, dairy, poultry, and hog farmers would all belong to the same bargaining association and prices would be such so that non favors the other, he explained. The temptation of switching from one commodity to another would thereby be nullified and agriculture would become more stable, the 1958 graduate of Downingtown High School's FFA program said. He believes such a system would act as a barrier against situations which would tend to flood the market during times when some commodity prices are high which could ultimately cause a break in prices. Interestingly, similar viewpoints on supply and prices by farmer cooperatives are unacceptable to Stanford. As he sees it, the family farm won't survive unless an all-inclusive farm organization (rather than a single commodity interest such as dairy cooperatives) achieves control of farm products marketing.

"Farmers have been educated to be satisfied with what they're getting. And as a group they are more religious than any other segment of our society which makes them more willing to take an extra step to be fair," Stanford remarked. He pointed out that the entire U.S. economy would improve if farmers got paid their fair share. Citing a study supposedly drawn up by Oklahoma's senator Fred Harris, the country would not have had a recession or the high rate of unemployment if farmers were more adequately rewarded, Stanford claimed. The study revealed that every dollar earned in farming multiplies through the economy seven-fold. Consequently, Stanford believes that the whole economy would be better off if farm prices were higher.

He believes the same is true for the use of food stamps. Generally speaking, his philosophy on that is - the more the better. He claims that they generate more income for farmers as well as the economy as a whole.

Advertising is another sore spot in Stanford's appraisal of this country's present agricultural system. "What's the sense of advertising a product if we have no control over price," he asked. He's opposed to dairy cooperative-sponsored advertising programs which deduct a nickle or so for that purpose. Referring to an increase in Class I sales in the Philadelphia milk marketing area, Stanford says it isn't due to advertising but because of the expansion of the Order 4 milk shed.

Do the laws of supply and demand set farm prices? No way, Stanford insisted. They're set by chain stores and other business which hold power. He wants farmers to have that power.

Kimmel joined the conversation again at this point. Referring to Stanford's earlier remark about farmers being "educated" to be satisfied with what they get, he pointed out that consumers have undergone a similar process.

"Consumers have been led to take too much for granted - they've been led to believe that there will always be plenty. And most farmers are not willing to admit that they're going broke. Their efficiency and pride are being taken advantage of," he declared.

Mrs. Stanford (Judy) interjected: "The farmer has to be satisfied with what is offered when he goes to market and has to pay what's asked when he goes to buy."

A man who has farmed on his own for the past 13 years, Kimmel said five of those years were dry, two more saw floods and 1975 was a political-economic disaster. "Eight out of 13 years were bad," he commented.

Stanford remarked how most farmers come to each other's aid in times of tragedy and wondered out loud why they can't band together for the sake of higher prices.

Kimmel summed up his feelings this way: "We used to have a little padding in our operating budgets, but not anymore - we can't let our accounts be carried by dealers like we used to. We're paying more interest and are being forced to use banks more often. We should be able to carry ourselves but can't ... that's a sad way to lose pride."

Black - White 4-H meets

The Chester County Black & White 4-H held its March meeting recently at the home of Mr. & Mrs. I. Newton Evans Jr. The Rollerskating Party to be held at Kimberton Rollerama March 29th from 7:30 to 10:30 was discussed and tickets were given to club members to be sold. Everyone is welcome for a good time. The tickets are to be sold by any club member or at the door for a donation of $1.50 and 50 cents for skates. Then the Hoard's Dairyman annual Cow Judging contest was judged. The meeting was then closed and refreshments were served by Mrs. Evans.

The next club meeting will be held at the home of Mr. & Mrs. Jefferson Yoder, Elverson, on April 9th, 7:30.

NATIONAL PORK
Producers Council®
Over the last few years, the image of pork and the producer has changed. Today, producers are proud of their product. And, through the NPPC, producers have proven to consumers that pork not only tastes good, but it's good for them, too.
The NPPC was formed and is funded and directed by producers. NPPC promotes pork to consumers in a vigorous year-round advertising campaign. The NPPC also funds research on key production problems indentified by producer-members.
Our work promoting your product has just begun. We want to do more. We need your help. If you would like to join your fellow pork producers in supporting these worthwhile programs, contact:
National Pork Producers
4715 Grand Avenue
Des Moines, Iowa 50312
We will direct you to the proper state leaders. Remember, our job has just begun.

Precautions for avoiding botulism

Calling the microorganism causing botulism "the most deadly food poisoning known," an Illinois Institute of Technology microbiologist today urged consumers to follow several precautions to avoid the often fatal outcome of botulinogenic spoilage of foods.

Dr. Nicholas Grecz, an associate professor in the Biology Department of IIT's College of Liberal Arts and a recognized international authority on botulism, suggests that consumers take these steps to protect themselves against botulism poisoning:

1. Never eat or taste foods which are known or suspected of being spoiled. Although it is impossible to verify as fact the claim that enough toxin to cause death might be ingested from a single spoiled green bean, it is true that spoiled foods may be highly toxic.

2. Do not throw away swollen cans or spoiled foods which may be retrieved and consumed. Cans which emit a strange odor, bulge or squirt the food out under pressure when opened should be reported to store managers and turned over to public health officials for examination.

3. If in doubt, heat the suspected food to the boiling point. Heating will destroy any toxin which may have developed, although it will not kill the botulinum spores.

4. Always refrigerate leftover foods.

5. If you do home canning, never attempt to can without a pressure cooker. Heating should be at 250 degrees F. for 20 minutes.

"Improper home canning is the greatest contributing factor to deaths from botulism," Dr. Grecz says.

"Normally, modern professional food processing techniques produce safe industrially canned foods. However, accidents, although rare, are an ever-present danger. Can-closing machines occasionally fail and cause recontamination of foods after processing, some cans may be accidentally missed during processing, or canning methods may be altered without the realization that the new process increases the danger of botulism."

Grecz warns that changes in industrial food processing technology may actually increase the danger of botulism. "For example, salted and smoked fish packed in air-tight plastic containers, may be made a better-tasting product with less salting and a shorter period of smoking, but this change in preparation creates a much greater danger of botulism poisoning."

He suggests that the food processor "should accept responsibility for periodically educating its employees about the dangers of botulism, resulting from incorrect processing steps. The processor should also develop additives which increase the smell caused by botulinogenic spoilage in foods, as a danger signal to the consumer."

Grecz cites as particularly susceptible to botulism foods which produce little smell when spoiled, and which are normally eaten from the can without heating. Such foods include string beans, corn, beets, asparagus, and smoked fish.

The small rod-shaped germs causing botulism are named Clostridium botulinum, and produce seed-like spores which are tremendously resistant to normal food processing treatments including heat, drying, freezing, chemical germicides, curing, smoking and salting.

The botulism organism has been found by tests to resist a dose of radiation 2,000 times the dosage fatal to humans, according to Grecz.

"This highly resistant organism grows and produces toxin in almost any food which is not extremely acid such as tomatoes and pickles and where oxygen is virtually absent, as in sealed cans or air-tight casings.

Botulism posion survives the digestive juices, is absorbed by the bloodstream, then travels to areas where nerves join with muscle, to cause a relaxed paralysis. The life-sustaining muscle functions involved in breathing are blocked and death usually follows from respiratory failure.

According to Grecz, botulism organisms are found in soil, in decaying plant and animal matter, on potato peelings, in rivers and lakes. "In dry soil or dust, they will survive almost indefinitely. Around the midwest area, the bottom mud of Green Bay is particularly rich in the organism - over 90 percent of mud samples taken from the bottom contain live botulinum germs."

"Thus, it follows that a high percentage of fish in the lake carry live germs and that foods can be readily contaminated with this organism, even under seemingly perfect sanitary conditions."

"Fortunately, while deadly, botulism poisoning is quite rare. In fact, it is so infrequent that doctors themselves often do not diagnose it correctly at the onset, and there is the danger that the stricken person may develop paralysis and even die before treatment is administered," according to Grecz.

Grecz points out that another danger of botulism is that it often strikes when least expected, at weddings, picnics and large get-togethers, at communal kitchens, or as the result of eating foods distributed by national chains over vast geographic areas.

He urged the medical profession "to take steps to emphasize the typical symptoms of botulism periodically to physicians and to the public, to facilitate prompt recognition, reporting and treatment."

Farmers seek tax reform

HARRISBURG — A farmer-spokesman for the Pennsylvania Farmers' Association (PFA) recently called on Congress to cut the tax bite taken by the government through the Federal Estate Tax laws.

Robert Burr, a dairyman from Butler County and chairman of the PFA national legislative committee, made the comments in a speech here at the Quality Inn, before more than 200 farmers and legislators.

"A farmer and his family work throughout their lives to build a farm business," Burr told the group, "but the present estate tax laws have forced many widows to sell a portion — if not all — of the family farm to pay the inheritance tax following the death of her husband. In many cases the same law has prevented a son from taking over a farm following the death of his father."

Burr said that the main reason for this situation is that the federal estate tax exemption was set at $60,000 back in 1942, and hasn't been adjusted since. "In these days of inflation, it isn't unusual for survivors to inherit a family farm valued at much more than $60,000," Burr stated.

He explained that there are several proposals in Congress for changing the estate taxing system, but the two "front runners" are those proposed by President Ford and another by Congressman Omar Burleson of Texas.

Ford's proposal, according to Burr, "is like being on death row and getting a stay of execution because of a temporary electrical power shortage. It does nothing in the way of a long-range answer to the estate tax situation now facing us."

The president's plan would stretch out the estate tax payment period so that it can be paid out of the income of the farm. No payments would be required for five years and 20 years will be allowed for full payment of the estate taxes at a four percent interest rate.

The Burleson bill by contrast would increase the base deduction before tax. "We favor the Burleson approach," Burr said.

On other farm issues Burr called on the Congress to:

- Eliminate export controls on farm commodities.
- Reform the food stamp program.
- Revise the Packers and Stockyard Act to make it more responsive to farmers' economic needs.
- And to exercise provisions of the new budget control act to cut federal government deficit spending.

The farm group, numbering more than 200, were in Washington, D.C. to visit with their legislators.

...t'l. peach producers ...praise Pennsylvania

...INSBURG, WV. - ...roducers from 26 ...ttended the 1976 ...l Peach Council ...on last month in ... Pa.

...y three years of ... by Pennsylvania ...roducers, Extension ... Pennsylvania State ...ty staff members ...ed industry people ...i the convention.

...McPherson of New ...., the new president ...nal Peach Council, ...igh praise to the ...tion committee ...n who handled the ...tails of the meeting. ...ireds of hours of ...e work was done during the planning stages," McPherson said, "and the committee chairmen were working hard during the convention to smooth out last minute problems and handle final details."

Directors of the National Peach Council also appreciated efforts of the Pennsylvania, and passed an "Appreciation to Pennsylvania" resultion on the last day of the meeting.

It read:

Appreciation to Pennsylvania

WHEREAS, we, the members, delegates and friends of the National Peach Council have had a wonderful stay here at Hershey, Pennsylvania, and

WHEREAS, we feel that the praise for such a distinguished meeting should go to Paul McPherson and his committee chairmen; Donald Petersen, general chairman; Tom Brewer, arrangements and printing; Glenn Shaw, meal functions; Carl Brenner, exhibits; Robert Kemp, exhibitor; Robert Hodge, hospitality; Mrs. Peggy Lott, women's activities; Raymond Reiter, publicity; Harold Stewart, registration; and Van Lott, tours, now.

BE IT THEREFORE RESOLVED, that the National Peach Council go on record in expressing our thanks and gratitude to Paul, his committee chairmen and those who helped them, and to Herhsey Lodge and Convention Center for their wonderful hospitality and for a very pleasant stay here at the Hershey Motor Lodge in Chocolate Town, U.S.A.

Unanimously approved by the National Peach Council Board of Directors this 25th day of February, 1976.

PFA proposes four major cooperative law changes

The Pennsylvania Farmers' Association (PFA) has proposed recommended changes to the Pennsylvania Cooperative law that would give farmers more control of farmer-cooperatives. E. Chester Heim, PFA public affairs director, testified before the House Agriculture Committee which is holding a hearing on possible revisions of the law.

PFA is a general farm organization and is affiliated with the American Farm Bureau Federation.

"Farmer cooperatives need to be in the control of farmer members," Heim told the committee. "They (cooperatives) need to be responsive to the wishes of their memebrs."

Heim told the committee that "farmers must be willing to take a more active part in the operation of their cooperatives, but at the same time we need to make it possible for farmers to have access to vital information about their cooperative."

The farm spokesman suggested that the law be revised in four major areas.

-Certified public accountants should be required to keep financial records and be accountable to the cooperative board of directors.

-Annual audits should be filed with the Auditor General, analyzed by the Auditor General and a copy be presented to the cooperative board of directors.

-Leadership in the cooperative should be elected by farmer-members and only genuine farmers can serve in elected postitions.

-Quarterly financial reports should be available to members when requested.

Coffee Shorts

Before Arabs became the first to cultivate coffee trees in the 6th century, Galla tribesmen in Ethiopa ate the wild berries or mixed them with fat to form cakes that could be carried and eaten by warriors on the march. Iced coffee, now a summer thirst-quencher, originally came from Algeria and was known as mazagran.

BICENTENNIAL BYPATHS

On March 19, 1776, at Annapolis Md., the Maryland Council of Safety directed George Plater and Brigadier General John Dent to

cooperate with their Virginia counterparts in erecting alarm beacons on the shores of the Potomac to give warning if a British fleet ascended the river.

Two promoted at Weaver's

Raymond L. Trout, Boehms Road, Willow Street R1 and Larry J. Shirk, 224 W. Main Street, New Holland, have recently been promoted to new positions within the sales division of Victor F. Weaver, Inc., New Holland, PA.

Trout, formerly wholesale sales supervisor for Weaver Foods, Inc., a Weaver subsidiary, has been named to the position of home area sales supervisor. Trout joined Weaver in 1971 as a supervisor in the Weaver prepared foods operational division. In 1972 he was named wholesale supervisor, a position which he recently maintained. In his new position he will be responsible for Weaver prepared food sales in the Reading, Lancaster, Harrisburg areas.

Shirk, formerly a retail sales assistant has been promoted to the position of wholesale sales supervisor for Weaver Foods division replacing Trout. Shirk is a 1975 graduate of Elizabethtown College. He joined Weaver upon graduation as a retail sales assistant.

In his new position he will be responsible for supervising the wholesale sales accounts of the Weaver Foods division.

Denise G. Pfeiffer, Colonial Crest Drive, Lancaster, has been promoted to the position of market research representative in the marketing division of Victor F. Weaver, Inc., New Holland, PA.

A graduate of Elizabethtown College, Miss Pfeiffer joined Weaver upon graduation in 1972, as a sales correspondent and more recently has served as a customer service representative in the sales division.

In her new position as market research representative she will be responsible for conducting market surveys and placement analysis in Weaver market areas.

Grassland Senior wins chapter production award

LaVern Martin

By MELISSA PIPER

NEW HOLLAND — The president of the Grassland FFA Chapter, LaVern Martin, was honored as the Chapter Star Farmer, at the organization's annual banquet held at the high school here recently.

The son of Mr. and Mrs. Clyde Martin, East Earl, LaVern has been active in the FFA program and has majored in dairy production projects. The youth also captured a foundation medal for outstanding work in public speaking during the program.

Dean Weiler was named the Star Red Rose Farmer during the ceremony with Dan Witwer receiving the Chapter Farmer Award. Three first year members won top Greenhand awards and included Brian Wise and Clifford Martin as the Star Greenhand Production winners with Brian Hess as the Star Agribusinessman.

Fourteen members of the Grassland FFA were also honored for their individual efforts in projects ranging from beef production to outdoor recreation. Receiving the Foundation Medal Awards were: Dean Weiler - ag mechanics; Bob Reifsnyder - ag processing; Jim Zimmerman - ag sales; Ken Burkhart - ag production; Jeff Martin - beef production; Tom Wentzel - dairy production; Randy Weber - poultry production; Richard Groff - livestock production; Dan Witwer - crop production; Bill Highes - swine production; Elvin Huyard - home and farmstead improvement; Tim Weaver and Gary Snader - soil and water management; Mike Hartman - outdoor recreation and LaVern Martin - public speaking.

The Chapter presented a number of certificates of appreciation to business leaders and community people who had helped in aiding the group. Recipients were: Gary Mayk, Dave Gerstenlauer, Linda Horst, Frank Mohler, Gerald Groff, Irwin Horst, Robert Groff, Jr.; Marvin Weaver, Bill Trupe, John Miller and Eugene Martin.

Seven guests were inducted into the FFA as Honorary Chapter Farmers and they included: Clyde Martin, Tom Buch, Gary Martin, Donald Collins, Charles Martin, Glenn Weber and Melissa Piper Bowman.

Two former members of the Grassland FFA who are currently state officers spoke to the group following the banquet. Don Weaver and Lloyd Hoover gave their "Thoughts in Passing" and expressed their thanks to the FFA for personal goals and involvement.

Measles immunization advised for children

HARRISBURG - State Health Secretary Dr. Leonard Bachman recently cited several outbreaks of measles in the commonwealth and issued recommendations to parents, physicians and school officials for the immunization of children.

"Outbreaks of measles are presently occuring in several areas of the state. The majority of the cases reported to the Health Deaprtment are in school children in the upper elementary and middle school grades. In some of the cases, children were immunized, but most were not," Bachman said.

Following are the recommendations for the immunization and reimmunization of children during the measles season:

-Any child who is at least one year to 18 years of age (currently in school) who has never received live virus measles vaccine in the past or has an incomplete medical history should be immunized with live virus measles vaccine.

-Any child who is-was immunized before age one, regardless of the circumstances and regardless of the vaccine used, should be reimmunized with live virus measles vaccine at one year of age or as soon thereafter as possible.

-Any child who received inactive measles vaccine only, regardless of age, should be reimmunized with live virus measles vaccine as soon as possible.

-Any child who received live virus measles vaccine with measles immune globulin (MIG) at or after age one should be protected unless an excess amount of MIG (in excess of .01cc-pound of body weight) was given. If an excess of MIG was given, the child should be reimmunized with live virus measles vaccine as soon as possible.

"Some confusion has resulted on the issue of reimmunization," Bachman said. "I must point out that children immunized before 1966 with the vaccine Lirugen (Dow Pharmaceutical) are still protected against measles as long as they received the vaccine after one year of age.

"In addition, children who received measles vaccine with measles immune globulin (MIG) need not be reimmunized. This vaccine was an effective vaccine as long as it was administered at or after age one and the amount of MIG was not excessive."

Nutrition featured at horse program

"Nutrition . . . Feeds and Feeding The Horse" will be the subject of a special meeting on horse management scheduled by the Cooperative Extension Serivce. To be held on Tuesday evening, March 23, beginning at 8 p.m. at Hunterdon's Extension Center, in New Jersey - the meeting is open to all interested in horses.

Speaker will be Dr. Frederick Harper, Horse Sepcialist for the Extension Service at Rutgers' Cook College. Dr. Harper will discuss nutrition of the horse, the merits and qualities of a variety of feeds, and provide his recommendations for selecting rations and determining daily feed allowances.

Harper received his Ph.D. degree at Rutgers while majoring in equine nutrition. He is author of several books and numerous publications. He has actively worked with New Jersey's 4-H youth in the horse project area, and currently carries the responsibility for the 4-H horse program in the state.

Also on the program will be H. N. Repair, Somerset County Agricultural Agent and Area Livestock Agent for Hunterdon, Somerset and several nearby counties.

Hereford bulls increase in popularity

KANSAS CITY, Mi. — The demand for Hereford bulls has taken a great swing upward according to figures derived from records of transfers from the American Hereford Association, according to H. H. Dickenson, executive vice-president.

During the first six months of the AHA fiscal year, September 1, 1975 to February 29, 1976, transfers of Hereford bulls have increased 8.6 percent over the same period of a year ago.

"We feel these figures are indicative of the cowman's desire for a return to many of the basics of the cow business, and his finding that out in the pasture it is hard to find a substitute for the horned Hereford bulls," Dickenson added.

Registration figures are running slightly lower than for the comparable time of a year ago, but there has been a substantial upswing in the past three months.

"This increase during the last three months reflects the demand, and the higher prices for Hereford bulls since the fall bull sale season began in October," Dickenson added. The 1975 fall sales averaged $41 per head higher than the fall sales of 1974. 1976 spring sales are showing increases of some $100 per head.

In other processing work at the AHA, substantial increases are evident in the Total Performance Records Program the first six months of this year, according to Craig Ludwig, TPR director.

Cow herd enrollments are running some 10 percent ahead of the like period a year ago, with some 57,311 calves already processed for 205 day data.

The newest of the TPR programs, the 140-Day-On-The-Farm test program became operative in the fall of 1975. Since that time, breeders have enrolled 948 head on the test which is a systematic method of determining the doing abilities of a breeder's bulls, as compared to his own herd contempories.

In the feedlot and carcass evaluation phase of TPR, some 10,000 head have been slaughtered since the inception of the program 12 years ago. "At the present time, there are 1,111 head of steers and heifers, representing the progeny of 104 bulls, being tested. This figure has already surpassed the largest total for any one year in the history of the program," Ludwig added.

A opposes EEC skim milk plan

E, Italy — Top of- of the American n Association (ASA) e organization will a campaign against European Economic unity (EEC) plan to surplus stocks of milk powder by forcing in animal feeds.

President Seymour on and Executive Vice dent Ralph Jackson eetings in Europe last with EEC soybean ssors and industry ls reconfirmed their that the plan will have trimental effect on an meal consumption rope.

bean consumption is ted to drop by about 0 metric tons — the alent of over 18 million els of soybeans.

y also said the proposal e setting a dangerous edent. Johnson noted is widespread belief once put into effect, the am will become per- nt even though it is now duled to end next Oc-

SA plans to do everything in its power — working through trade negotiators, Congress, the Department of Agriculture and others — to assure that this interference in the European soybean market is not extended beyond next October," said Johnson.

The ASA president also said he is concerned that the plan contains no provisions to prevent stocks of skim milk powder from building up again in future years.

"It solves an immediate problem but does nothing about the underlying cause," he said. "We feel the EEC should abandon the present plan in favor of one which would discourage overproduction of milk.

"If the EEC persists in its present plan, ASA would have no alternative other than to ask our government to take countermeasures."

Jackson is meeting in Rome with officials of the Food and Agriculture Organization (FAO). He said ASA expects to enlist the support of other nations who export protein to the EEC in acting against the plan.

Power grab suspected

A spokesman for the Pennsylvania Chamber of Commerce warned recently that a labor-sponsored bill now before the General Assembly would destroy collective bargaining in the state, and make the state's unions preeminent in deciding the future course of Pennsylvania's economy.

Robert Hibbard, executive director of the statewide business organization, said the bill, H. 2144, was ostensibly designed to prevent use of strikebreakers in labor disputes. disputes.

"But it broadens the definition of 'strikebreaker' to include nonstriking employes and management personnel who are used to perform the work of strikers," he said.

"In other words," Hibbard explained, "if there are three unions in a plant with one on strike, the members of the other two unions, as well as nonunion employes, cannot assume the strikers' jobs. What the unions want here is a situation in which they are able to say, 'If we strike, you shut down.'

"I can't believe that the legislature will be so unmindful of the rights of citizens that it will enact such a bill," Hibbard said. "We realize that the House labor relations committee is heavily oriented toward organized labor, but we hope that the General Assembly will recognize the danger of such legislation."

Government should remain neutral in labor management relations, Hibbard said. "This bill puts the state government on the side of labor and will discourage much needed job-producing investments," he said, adding that "no one in his right mind would locate or expand in Pennsylvania with this type of legislation on the books.

"If H. 2144 is enacted, the only thing the legislature has left to do for the unions is to walk the picket line for them," Hibbard concluded.

Charolais Registry adjusts feeds

HOUSTON, Tx. — The American - International Charolais Association has made changes in its fee structure for registering and recording cattle to strengthen the association's support for its 22,000 members.

These supports come in the establishment of new lower fees for registration of calves under six months old, and a recovery period to allow for low-cost registration of over aged cattle which were not registered when overall beef cattle market conditions were extremely low, says Dr. J. W. Gossett, executive vice president of AICA in Houston.

The board of directors of AICA approved a $10 registration fee for purebred Charolais calves under six months of age. Calves not registered by that time would be assessed the usual $15 registration fee for purebred and fifteen-sixteenth Charolais calves. Effective now, registration - recordation fees for calves under six months of age are purebred and fifteen-sixteenth Charolais $10, 7/8 Charolais $7.50, 3/4 Charolais $5, and 1/2 Charolais $2.50.

Beginning March 15, 1976, and continuing through September 15, all over-aged cattle will be registered - recorded at the following rates without regard to age of the individual animal: purebred and fifteen-sixteenth Charolais $15, 7/8 Charolais $7.50 3/4 Charolais $5, and 1/2 Charolais $2.50.

"With the improved beef prices and the new carcass grade changes, there will be an increased demand for purebred and recorded cattle," the Charolais executive stated. "AICA is attempting to assist its members in being prepared for these increased sales by these registration fee reductions.

"Recent USDA carcass grade changes recognize younger, faster-growing and more efficient high yielding beef cattle, the type Charolais breeders have been producing for years. After all, this is the type, kind and quality of cattle necessary to produce slaughter cattle which will benefit from the grade changes," he added.

For years, the American Charolais have demonstrated that rapid early growth of consumer preferred, lean beef is not only possible, but profitable, and that an adequate genetic base is available in the Charolais breed to develop the kind or type of beef cattle which will serve as seedstock to the ever changing needs of the world's commercial beef industry, Dr. Gossett stressed.

Awards presented at Cloister FFA dinner

MOUNT AIRY — More than 40 awards were handed out here at the Fire Hall last week when the Cloister FFA chapter held its 14th annual awards banquet. Cliff Martin, vice president of the organization, served as toastmaster before a crowd which numbered approximately 200.

Among the top award winners were: Jay Oberholtzer, son of Mr. and Mrs. Chester Oberholtzer, Lititz R4, Star Red Rose Farmer; Reuben Auker, son of Mr. and Mrs. Reuben Auker, Ephrata R1, Star Red Rose Agribusinessman; Calvin Sauder, son of Mr. and Mrs. Christian Sauder, Ephrata R2, Star Chapter Agribusinessman; Anthony Eberly, son of Mr. and Mrs. Mahlon Eberly, Denver R2, Star Greenhand; and Steven Strauss, son of Mr. and Mrs. Robert Strauss, Ephrata R1, Star Chapter Farmer.

Foundation award winners included: Tom Brower, son of Mr. and Mrs. Harry Brower, 37 Bethany Road, fish and wildlife management; Jay Oberholtzer, agricultural mechanics; Leslie Groff, son of Mr. and Mrs. Samuel Groff, 211 S. State St., agricultural processing; Jeff Gehman, son of Mr. and Mrs. Paul Gehman, 126 Ben View Dr., Denver, agricultural sales and service; Cliff Martin, son of Mr. and Mrs. Paul Martin, Stevens R2, crop production.

Also, Curtis Martin, son of Mr. and Mrs. Samuel Martin, Ephrata R1, dairy production; Marty Hoover, son of Mr. and Mrs. Harry Hoover, Stevens R1, home improvement; Andy Dittrick, son of Mr. and Mrs. David Dittrick, Lititz R1, horse management.

Robert Strauss, son of Mr. and Mrs. Robert Strauss, Ephrata R1, livestock production; Steven Hull, son of Mr. and Mrs. Guy Hull, son of Mr. and Mrs. Guy Hull, 14 East End Ave., Akron, ornamental horticulture; Bob Fox, son of Mr. and Mrs. Richard Fox, Lititz R1, public speaking; John Weiler, son of Mr. and Mrs. Eli Weiler, Stevens R1, poultry production.

John Cramer, son of Mr. and Mrs. Robert Cramer, Denver R2, safety; Glen Beiler, son of Mr. and Mrs. Glen Beiler, Ephrata R1, sheep production; Kerry Boyd, son of Mr. and Mrs. Elmer Boyd, soil and water conservation; and John Zimmerman, son of Mr. and Mrs. John Zimmerman, Ephrata R1, swine production.

This year's Keystone Degree winners receiving pins included: Kerry Boyd; Gary Eberly, son of Mr. and Mrs. Mahlon Eberly, Denver R2; Calvin Sauder; Harry Leininger, son of Mr. and Mrs. Harry Leininger, Ephrata R1; Leslie Groff; and Brian Weber, son of the Rev. and Mrs. Lewis Weber, Denver R2.

Honorary Chapter Farmer degrees were presented to the fathers of the four boys and to James Stump, student vo-ag teacher.

Project book medals were awarded to chapter members, including:

Gold medal, Reuben Auker, for work experience; Gary Eberly, Cliff Martin and Harry Leininger, each for three enterprises.

Silver medal, Richard Strauss, four enterprises; Kerry Boyd, five; Curtis Martin, three; John Zimmerman, three; Dan Hollinger, one; John Weiler, six; Marty Hoover, five; and Steve Hull, work experience.

A bronze medal was awarded to Steve Strauss, five, and Dennis Martin, four enterprises.

Adult outstanding service awards were presented to Ezra Good, Hatfield Packing Co. buyer; Millard Pullin, county Girl Scout campground director; and Walter Shaub, Lancaster County Poultry Federation president.

Judging team plaques were presented to Ron Martin, milk products; Steve Strauss and John Weiler, poultry; Kerry Boyd, Harry Leininger and Dave Haldeman, dairy; Gary Eberly, livestock; David Martin, tractor driving; Jim Felpel, agricultural mechanics; Rick Pfautz, American Farmer Degree; Dale Weber, state agricultural sales and service; and Jim Felpel, state agricultural mechanics.

Chain animal winners were Allen Ackley and Charles Long, pen of three sheep; Randy Bucher and Donald Becker, capons; and Robert Fox, Larry Burkholder and Mark Weiler, dairy calves.

Jay Oberholtzer was chairman of the banquet, which included a presentation on chapter activities during the past year and music by Dennis Martin.

Among the award winners at last week's Cloister FFA banquet were, left to right, Reuben Auker, Calvin Sauder, Jay Oberholtzer, Tony Eberly, and Steve Strauss.

Sunflowers Growing

Total world production of sunflowers has reached 4 million metric tons annually. That makes it the world's second most plentiful edible vegetable oil—after soybean oil. Sunflower oil is comparable in many ways to corn oil. It is stable in storage and amounts to approximately 40 per cent protein. Sunflower oil is valuable for use in animal feeds Legend has it that the early pioneers crossing the plains of Utah left a trail of sunflower seeds so those following them could follow a blossoming path the next year

Metric is the shape of things to come

SALLY BAIR
ature Writer

eters, grams and ers may sound like words to you now, n years they will be dominant in our as a mile and an es, it's true, the are coming and ic will never again ame.

the whole idea of g to metric ements into per- e, Mrs. Alletta , extension home ist for Lebanon held a meeting on ject this week. Ob- people want to know o expect because fifty eager students up.

said the object of her was simply to have start to "think " She explained that r an act was signed makes it possible for ted States to change the new system over t ten years. She said ten years' time will he changeover to be radually, and we will accustomed to the and measurements we really need to rely hem.

rule of reason will most changes," she that things will be d only when they are ut or become obsolete. those who think it may impossible task to te a whole new system asuring, Letie pointed hat there are many in which metric rements are readily ted. Photographic ment is measured in metric as are medicine and sporting events. A 35 millimeter camera and the 90 meter ski jump are common usage. And man's first steps on the moon were calculated in metrics.

Your children are probably already learning metrics in school - they might be a good source of help when you get stuck. Letie said it has been estimated that the changeover to metric will save from six months to two years in memorization time, since the current system is purely memorization, with no coordination. Mental anguish is probably something else which will be spared. Quick now, how many feet are there in a mile?

If you've been worrying about throwing out your old cookbooks or converting all your favorite recipes, forget it. Letie says, "There is no need to convert recipes to metric - at least not until you've broken the very last measuring cup in the world." But she added, "It would be good mental exercise to convert the recipes, to help learn the new measurements."

Letie pointed out that increasing and decreasing recipes will be a lot easier with metric measurements because there are no fractions involved.

Besides saving memorization time, the metric system has some other advantages. The United States is now the only country of any size which is using a measurement system other than metric. Obviously the changeover will offer substantial advantages to industries involved in export, and will allow the United States to participate in establishing International Metric Standards, which do not yet exist.

One big advantage of the new system is that the language is so simple. For instance, Letie used a chart showing that the word "meter" as a base word will replace the following: inch, foot, yard, fathom, rod and mile. Gram will replace ounce, pound, ton, grain and dram. The liter base will replace fluid ounce, teaspoon, tablespoon, cup, pint, quart and gallon. Centigrade and Celsius will replace Fahrenheit.

So in addition to the base words, only a few prefixes are necessary, and you're on your way to being able to communicate metric. The important terms to learn are: milli equals thousandth; centi equals hundredth; deci equals tenth; kilo equals 1,000 times the base; hecto equals 100 times the base; and deka equals ten times the base. Grams, liters and meters are all increased and decreased the same way.

Despite the ease with which Letie described these terms, this reporter remained skeptical. It sure sounded sensible and the audience seemed to be really understanding. But then came the time to do an actual conversion. How many milliliters are in .7 liters? Now there was a little confusion. Was it .007 milliliters or was it 700 milliliters? There seemed to be an equal number of the audience insisting on each number.

But Letie was firmly in the helm and with a patient understanding continued with the explanation until everyone was satisifed that it was really 700 milliliters.

Letie did concede that learning the temperature may be hard. Centigrade and Celsius will be the measurement instead of temperature. Zero degrees is freezing and 100 degrees is the boiling point since celsius is based on water at normal atmospheric pressure at sea level. Therefore, 25 degrees Celsius is relatively warm whereas it would be below freezing in Fahrenheit.

Letie had some samples of food packages which already appear with both conventional and metric measurements. These have been added voluntarily by the companies. If you check your pantry and read the weight and volume you may be able to really get a feel for metric measurements. Patterns are also being distributed with both metric and conventional measurements, so seamstresses can slowly begin to comprehend some of the measurements.

Letie had brought some tools which will be helpful in converting to the new system. She had a tape measure which had both metric and conventional measurements printed on the same side. She recommended that when purchasing a new tape measure it should be one with measurements noted on the same side so that you get accustomed to seeing the two measures together. She had a glass measuring cup which had both measurements, and measuring spoons which are marked both ways.

She also had examples of slide rules and pocket calculators which have the necessary tables for conversion. She said there is no need to memorize conversion charts, because references are so easy to use.

Letie encouraged the group to use the tape measures and measure themselves to become familiar with their metric measurements. She also suggested figuring out the kilometers between two distances you frequently travel, and to measure common things around the house and get to know how they measure up in metric.

She said, "Begin to think in terms of metric - to get a sense of it."

For those who might be interested in really digging into the subject and having some actual practice with figuring measurements, Letie suggested taking Penn State's correspondence course on the metric system. She said it can be a valuable study aid for the whole family.

She had one caution as we "think metric." Since meter sticks will probably soon be in common use, and some measuring tapes have metric on one side and conventional measures on the opposite, she recommends being very careful when measuring to be sure you are using just one terminology. She said, "Don't cross up measuring equipment." Obviously the results could be disastrous if you substitute a meter stick unknowingly for a yard stick when measuring for your new living room carpet.

So begin to think metric in your everyday life. For instance, 97-58-97 may not sound like glamorous measurements, but in 1986 those numbers could well be the measurements for the Miss America. And if your temperature is 36.9, don't panic - that's normal in centigrade.

The changeover to metrics may cause you some headaches over the next few years but if you allow it to become a part of your life gradually you may just agree that it is a lot easier to work with than inches, feet and teaspoons.

So, until the task is fully accomplished, THINK METRIC!

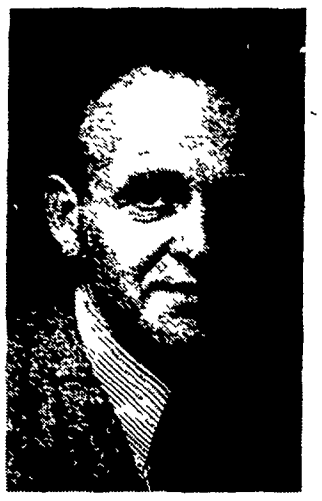
Aamodt wants congressional seat

Editor's Note: The following political announcement was submitted by Aamond, and statemsnts contained therein are those of the candidate.

Norman O. Aamodt, a 48 year old farmer, former research engineer and math teacher, has entered the 16th District Congressional race. He resides in Chester County where he operates a 140 acre beef farm and retail business. Aamodt feels he has a real stake in the 16th district and wants to help with its problems from his experienced in industry as well as on the farm.



Norman Aamodt

A former member of the technical staff of the Bell Telephone Laboratories, Murray Hill, N.J., a research facility of American Telephone and Telegraph Company, he also worked as a market development manager for Avisun Corp., Marcus Hook, Pa., and as a technical consultant for several corporations in the field of cables and wires. He pointed out that in all these jobs, as well as in farming, the dollar spent was a major consideration and that should be the first order of business for Congress.

Aamodt suggested that if the USA reduced its debt of 600 billion dollars by one percent annually, the 300th anniversary would be celebrated debt-free. Aamodt says he would work to that end in Congress, in addition to protecting the family farm and the integrity of the family and local government.

Aamodt says he has thought through some workable and needed programs and reforms that would result in the improvement of the economic and moral climate of America.

He was an Eagle Scout, scoutmaster and member of a volunteer fire company, in the U.S. Army and an honor graduate of Stevens Institution of Technology, Hoboken, N.J. He is married to Marjorie Stadele Aamodt and has three children.

The candidate points out that a reduction of inflation, national debt and balance of payments can be largely achieved through strengthening family farms. Because the family farm has a high rate of productivity per person, our farm products are attractive in a world market and have increased the value of the dollar, he says. The farmer should be given a free market at home and abroad, with fair competition for his products bringing the price to its fair level. Americans do not save anything by paying less at the grocery store and more in taxes to loan Russia money to buy our wheat, only to buy it back at higher prices, he exclaims. The deals with other countries should be realistic with prices fixed by our own demands; they should bring back us some real commodity which is in short supply here. Under these conditions, farmers would risk further investment and would increase production to meet all of our own needs and more of the world's needs, he adds.

Aamodt points out that the average age of the farmer is 51 years old. This means that young men are not entering this field due to the economic squeeze on the farm - despite predicitions of wide spread food shortages. Investment in farming is often not feasible today, return on investment from the average farm being only two - three percent with interest rates being eight - eighteen percent. The vast experience of farm-trained sons and daughters is being lost because they cannot afford to set up a farm at the present cost of borrowed money. Aamodt proposes that federal funds be diverted from unproductive programs to provide capital at low or no interest for five or more years to qualified young people to use for buying ground and equipment. Qualifications could be rigidly determined by test and experience and would be best set-up and administered by farmers. It appears to Aamodt from his experiences from setting up and operating a 140 acre beef farm in southern Chester County that without such a program it is impossible for farm-trained youth to enter farming as they would any other business, due to enormous capital requirements and low return on investment.

The candidate has no political ties but hopes that local Republican leaders will see him as a candidate who will strengthen the image of the party locally and nationally. He feels that of all the candidates he is more like the cross-section of voters in Lancaster, Chester and Lebanon counties than all others.

Aamodt plans to conduct his campaign with $1 to $50 donations of friends and other citizens. He states that he does not have any loose capital to invest as he is in the same boat as the majority of Pennsylvania farmers - squeezed between high costs, low prices and an uncertain market. He is not soliciting or accepting large gifts from corporations or groups, nor bankrupting his family to buy a job in Washington. He is counting on his credentials and a citizen committee to carry his candidacy to the people of the 16th district. Expenses are being kept to a bare minimum by contribution of his own time away from farm work and his wife's coordination of activities. He plans a vigorous campaign against the three favored candidates whom he sees as a threat to the family farm, the responsible use of federal monies in the 16th district and morality.

GNP

Industrial capacity is the main determinant of gross national product—which is the primary measure of a nation's annual production of real wealth Industrial efficiency of nations can be further determined by relating the national product to the size of population In 1970 the GNP per head of population of the United States was $4 850, that of Sweden $3 820 West Germany $3,020 and Japan $1,090

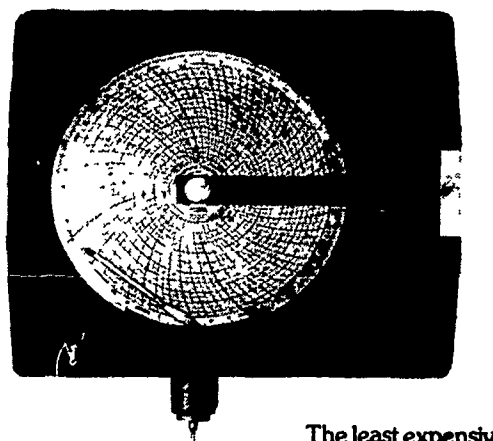
WHO'S MINDING THE MILK?



If you depend upon your milk check for a living, who's minding your milk?

The least expensive, one-shot insurance you can get is the Sentinel — the 10-inch recorder which charts temperature of your milk-cooling or holding tank. Here's what it provides:
- Permanent proof that proper temperature was maintained.
- Record of cooling equipment efficiency.
- Cleaning temperature recording on the same chart.

The Sentinel is also available with provision for actuating an alarm or warning light if pre-set temperature is exceeded.

Remember — if it prevents the loss of only one tank of product, the Sentinel has paid for itself. It minds your milk.

What's New

VERMEER BALE LIFT AND BALE WAGON

Officials at Vermeer Manufacturing Company, Pella, Iowa, have announced the addition of a three-point Bale Lift and a new Bale Wagon to that company's expanding One-Man Hay System.

With the new Vermeer Bale Lift and Bale Wagon, you can easily load and transport up to six big, round bales (made with a Vermeer 605 model baler) in minutes. The system incorporates an easy coupler hitch attached to the drawbar of the tractor, allowing the wagon to be hitched and unhitched without the need to leave your tractor seat.

When loading, you merely place the new Vermeer Bale Wagon on any convenient spot in the field and pull a rope from the tractor seat, unhitching the wagon from the tractor. Then, with the hydraulically - controlled Bale Lift mounted on the

three-point hitch, you slide the forks under the bale, lifting the bale onto the wagon platform.

After five bales have been loaded, you can, then, pick up another bale with the Vermeer Bale Lift before hitching up to the Bale Wagon and moving it to your storage area. Bales are unloaded in the same manner.

The Vermeer Bale Lift is constructed of ⅜" steel formed into channels for added strength. Bales can be lifted up to 66" off the ground (measured from the bottom of the bales). A 3" x 48" cylinder provides a lifting force up to a 3,000 lb. capacity. The Bale Wagon's deck size is 67" x 360" and has a load capacity of 7500 lbs.

Although designed to complement each other, the Vermeer Bale Lift and Bale Wagon are available separately.

New Adapter For Twist-In-Tips To John Deere and I-H Couplers

John Deere and International Harvester tractor owners can now adapt Metro Hydraulics' patented Twist-in coupler ends to a standard John Deere of I-H coupler body.

This simple low-cost adapter lets you enjoy the patented Twist-in coupler's advantages on tractors equipped with the complete Twist-in conversion, yet use cylinders with the Twist-in tips on a standard John Deere or I-H without the Metro conversion.

Metro Hydraulics unique Twist-in coupler will not lock up like other couplers (hydraulics people call this "flow blockage"). Lets you easily hook up hydraulic hoses against full pressure with only a twist of the wrist, whereas snap-in-type couplers must often be "bled" off to engage them. Also, Metro's Twist-in system does not leak during a pressure hook up.

"By providing these low-cost adapters we can make it easier for a farmer to convert as many of his tractors as possible to the Metro Twist-in system, yet use the same equipment on tractors without the conversion," says Dick Kast, Metro executive vice-president.

In addition to a full line of couplers, Metro Hydraulics also manufacturers a full line of Category II and Category III, and I-H and A-C Self-Hitch conversions. These hitches have been acclaimed as the "simplest and strongest hitch conversions available." Kast points out that no adapters of any kind are needed for the Metro hitches. Most other quick-type hitch conversions require some kind of adapters.

"We recently participated in a California test on Catagory III tractors in the 200-plus horsepower class. Of the three brands of quick-hitch conversions tested, our Metro Self-Hitch was the only one that stood up without damage," Kast reports.

Kast also points out that the Metro Self-Hitch is priced considerably below factory-offered quick hitches. "Yet our hitches are very competitively priced with other brands of conversions, generally we're lower cost when you consider the adapters needed on other brands."

For more information on the Metro Hydraulics couplers, adapters or hitches write Metro Hydraulics, Dept JD1, Box 20010, Minneapolis, Mn. 55420.

New Quality Bean Variety

MOUNTAIN VIEW, Ca. - A white seeded, green podded processing bean has shown very high yield potential in recent Ferry Morse Seed Company field trials. Called ARISTOCROP, this new variety is strong and upright and grows from 15 inches to 18 inches in height.

Besides its high yield potential, ARISTROCROP is particularly noted for its pod quality. No cavitation was evident in the Ferry Morse field trials, and with 50 percent sieve, sieve distribution was five or more at maturity.

For more information on ARISTOCROP, contact the Vegetable Seed Sales Department, Ferry Morse Seed Company, P.O. Box 100, Mountain View, California 94042.

WASHINGTON, D.C. — More than 200 farmers met here with their Congressmen Wednesday and Thursday (March 10 and 11) to discuss major agricultural issues being considered by Congress. Here is the delegation from Lancaster County: First row; from left to right: Mr. and Mrs. Ivan Yost; Bob Walker, legislature assistant for Congressman Edwin D. Eshleman; Mrs. Earl Newcomer; Earl Newcomer; Helen Wivell. Second row; from left to right: James Kreider, Carlton Groff, Verna Frey, James Hess, Marian Brenneman, Joan Rohrer, Harold Ney.

Birth controls needed

There is an estimated population of 36 million each of dogs and cats in the United States.

The lack of accurate census makes it impossible to define the exact number or the magnitude of the surplus pet problem, says John Sullivan, Community Resource Development Assistant of the Schuylkill County Extension Service.

The combined dog-cat population is equal to one-third of the United States human population. Approximately 20 percent of 14 million of these animals pass through animal shelters annually and a large percent of these are ultimately destroyed. Additional uncounted numbers are killed or die outside of these shelters.

A better method of pet population control is surely possible.

Research is underway by numerous stations on this very problem of surplus pets and perhaps a solution will be found. The most recent experimental method of birth control for pets is by immunization. A purified preparation of bovine luteinizing hormone is used as the immunizing agent.

Further trials are necessary to perfect the procedure, but it still offers a glimmer of light at the end of the tunnel, adds Sullivan.

High moisture corn discussed at cattle meeting

By MELISSA PIPER

LANCASTER - At a recent meeting for cattlemen sponsored by the Weaver Star Silo Company, Dr. Les Burdette, extension livestock specialist from Penn State, addressed the visiting producers on the topic of high moisture corn. The highlights of Burdette's talk follows for the purpose of review for those farmers already using high moisture corn and for the benefit of producers not yet on the system.

"High moisture corn is not new," Burdette recently told cattlemen at the Farm and Home Center here, "in fact it was mentioned in research during the 1920's."

"It wasn't however until in the 1950's that producers really began discussing the feed source seriously," the extension specialist added.

High moisture corn became popular for its obvious advantages as cattle seem to start faster on the ensiled feed material and producers are not hampered with the usual rodent problems. Corn can be harvested earlier also without allowing the material to dry completely.

But along with its many advantages, high moisture corn also has its problems. Burdette noted that it is usually best suited in a large operation and when using shelled corn, more time is required which often causes a "harvest bottleneck."

While personal preferences still plays a major role in wheather producers use shelled corn or ear corn, the current trend is toward the shelled variety as it requires less storage space. With ear corn, more storage is necessary since the cobs add bulk.

In any case Burdette suggested that high moisture corn be ground or broken before ensiling for better fermentation. Also the specialist cautioned the cattlemen against using poorly constructed silos as air exclusion is extremely important in the fermentation process.

"Mold will not develop if the structure is air tight," Burdette noted, "the more air which gets in will consequently cause problems later on," he added.

Burdette predicted that in the future "a lot more high moisture corn would be stored." "It is becoming the popular way to handle corn," he added.

Along with his advice on high moisture corn, Burdette also offered his thought on using corn cobs as a feed component for brood cows.

"Cobs combined with husks, protein and minerals can maintain dry brood cows," Burdette stated. "Brood cows need only maintenance and thus do good on such a ration."

Cautioning that such a corn cob mixture might require added water, the specialist also noted that the cobs should be ground. "Corn cobs have value but it takes more storage," he explained.

Burdette joined several other speakers during a day long conference on recycling animal waste and feed storage.

Central Dairy elects officers

New officers were elected at the meeting of the Central Dairy 4-H Club held on March 8 at the home of the Welsh brothers, R.D.1, Admire Road, East Berlin. They are — president: Carl Anderson, III; vice-pres.: Tim Eisenhart; secretary-treasurer: Cindy Rutter; ass't. sec.-treas.: Jill McGregor; news-reporter: Joey Welsh; ass't. news-reporter: John Mummert; recreation leader: Tommy Welsh; ass't. recreation leader: Jeff Stambaugh.

Committees were formed for a tour, fun day, and a display for "June is Dairy Month" at the North Hanover Mall. Tommy Welsh gave a demonstration on feeding soured colostrom milk to calves. Members judged five classes of cows in the Hoard's Dairyman contest.

The next meeting of the club will be held on April 12 at the 4-H Center.

Proud Pop

One of the boys at then-courthouse finally heard from his son who had joined the army some months earlier "Got a letter yesterday," he boasted "My boy's the only one in his outfit with nerve enough to hit the top sergeant They even promoted Johnny-boy to court marshal!"

e start of Spring just a week away, we're a bridge to a new season. Saying good-bye and snow. The beautiful white stuff isn't ppreciated as much as it should be. But it has a purpose in Nature and inspires photographers like Grant Heilman who took this picture.

SNOW

Friend or Foe?

By M. M. SMITH
Lancaster County Agricultural Agent

The prediction of snow brings moans and groans from the majority of our people; even weather forecasters apologize when they mention snow.

Why is it this product of Mother Nature has become such an unwanted part of our weather? Could it be the cost of removal, or the extra effort required?

Or might it be that too many of us are failing to realize the real value of a good snowfall?

Snow is formed when we have a very cold upper atmosphere. The moisture vapors freeze into white flakes which fall upon the earth in all sizes and shapes. On the average, 10 inches of snow equals one inch of rain in moisture content.

Snow is nature's one way of adding moisture to the earth. Think what a good snowfall would do at this time for the wheat growers of the Great Plain States.

The sight of dancing flakes should bring excitement to both young and old, as the earth gradually turns white. Snowfall is an Act of God and one of nature's most decorative elements. As the snowflakes pile up, they provide protection for all types of plants and vegetation.

Most cases of winter-kill of crops and plants can be prevented, if the plants are snow-covered at the time of the extremely cold weather. Zero weather without snow can kill winter grains such as wheat and barley, as experienced by local growers. Bare ground freezes deeply, while ground under several inches of snow freezes very little.

The heaving of plants out of the ground by alternate freezing and thawing can be prevented by being covered with several inches of snow. Strawberry plants under snow will not be damaged by cold weather; the same is true for wheat, barley or alfalfa.

However, without snow cover many of these plants will be heaved out of the ground and will die.

We'll admit that severe snowstorms with huge drifts are dangerous and impose hardships on many folks. Driving becomes more dangerous and snow plowing equipment costs money. The disruption of communication lines is an economic blow to any community. There is little doubt that all of us can get along without these extra weather problems.

On the other hand, think of the benefits.

We should consider the value of winter sports programs based upon snow. How can the youngsters enjoy sledding without snow? The popular sports of skiing and snowmobiling are built upon adequate snow cover.

The beauty of snowfall, and the extra comfort of home and the fireplace, are all plus factors of nature's most cleansing element - snow.

Therefore, the next time you hear snow in the weather forecast, or arise in the morning to a new snowfall, think of the good things that Mother Nature has given to mankind with the snow.

It has an important place on earth, along with the sun, rain, air, and the wind. Snow protects the earth the same as the blanket over a baby in its crib.

Dinner rallies set

AKRON - A series of five dinner rallies has been planned by the Boyd for Congress Committee, John Gibble, general campaign chairman, announced today. Boyd is a candidate for the Republican nomination to the 16th U.S. Congressional District seat now occupied by Rep. Edwin D. Eshleman.

Gibble said that Boyd would speak briefly at each of the rallies, concentrating on the issues he feels are central to the campaign.

The rallies are open to the general public. Gibble said tickets should be purchased in advance from rally chairman James Gibble, Lititz, phone 626-4091.

Each of the dinner rallies starts at 6:45 p.m. The dates, places and ticket prices are: March 20, Brunnerville Fire Hall, $4.50; March 26, Memorial United Methodist Church, Quarryville, $4.50; April 2, Brownstown Restaurant, $4.50; April 10, Hostetter's Dining Service, Mount Joy, $5; April 23, Friendship Fire Hall, Lebanon, $4.50.

AGWAY

Agway—the horseman's store

Agway stores and representatives across the Northeast offer a unique supply service for horsemen. For pleasure or show, for racing or trotting, there are Agway feeds that meet your particular needs.

But there's more to the story than an outstanding line of horse feeds. Agway can supply and erect economical, attractive stables and outbuildings, complete with insurance and financing if you wish. And fencing, posts, shovels, pails and forks. And health aids, tack and fly controls. Even seed, lime and fertilizer for productive, nutritious horse pastures.

The horses, you supply. But you can depend on Agway for most everything else, a service built on decades of experience in large animal care and feeding. Drop in soon at Agway.

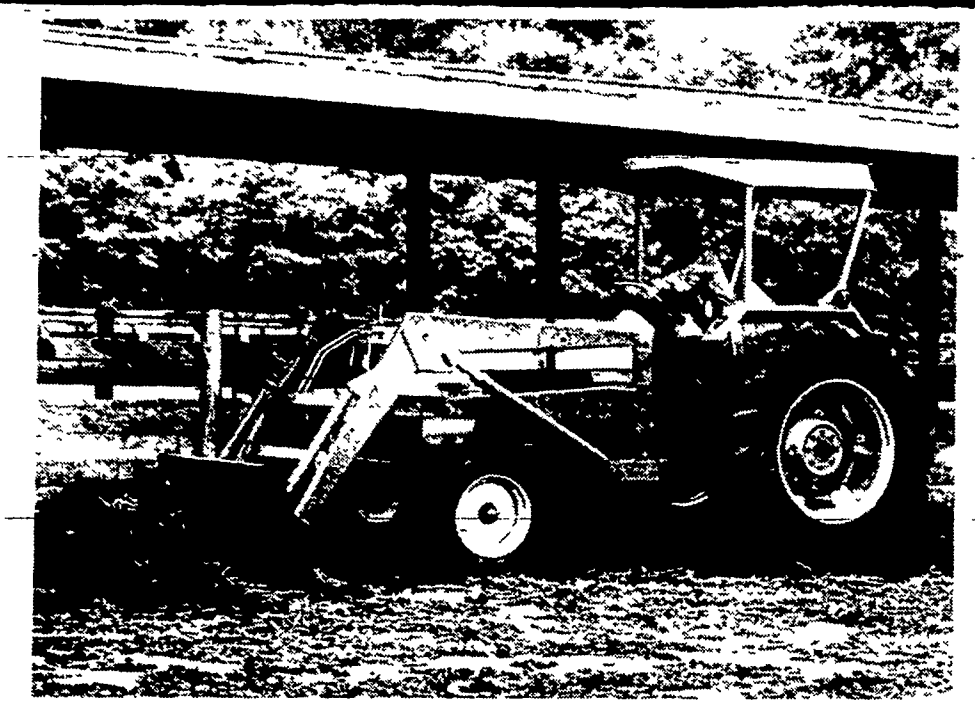
What's New . . .



New "Drive In" Loader Bucket Line Announced For Farm Tractors

A new line of sturdy "drive in" loaders for fast attachment to most tractors and a new series of versatile buckets for farmstead chores have been announced by White Farm Equipment Company, a subsidiary of White Motor Corporation.

White Farm Equipment's new "drive in" loaders are suitable for tractors with and without cabs - utility, row crop, wheatland and even four-wheel-drive.

Each loader frame is clean and open, built for fast, simple attachment - just insert four pins, connect hydraulic lines and go. Removing the loader assembly is just as quick and easy.

Four rugged buckets complement the new loader line in a variety of types and sizes.

Bucket models include manure fork and dirt plate, heavy-duty material, high-side snow bucket and slip-on snow bucket in working widths from 42 to 102 inches. Options include replaceable high-carbon steel tines and replaceable cutting blades.

Capacities range up to 6,000-pound breakout force, 4,000-pound lift capacity at full height, and 134-inch maximum lift.

For more information and copy of Bulletin P-239, contact White Farm Equipment dealers or R. Zuehl, White Farm Equipment Company, 2625 Butterfield Road, Oak Brook, Illionis. 60521.

New P & D Unloader Catalog

A new fully illustrated folder on P & D top silo unloaders is now available. The folder contains cut-aways of major components of the P & D unloader as well as new features and specifications on each model. A special section discusses P & D's new continuous door top unloader. P & D manufactures a complete line of automated feeding equipment for livestock. For a copy of this folder, write P & D Mfg. Co., Inc., Plainfield, Ill. 60544.

Herbicide report 'erroneous'

The Dow Chemical ompany issued a statement st week itemizing what it scribed as "factual rors" in a recent news port on the herbicide 2, 4, T.

The report by a free-lance riter, Daniel Zwerdling, ppeared in The Washington ost on January 25.

"It is not our intent to pick a fight with The Washington Post," Dow said. "As a matter of fact, we have substantial reason to believe the newspaper was an innocent victim of disgraceful reporting by Mr. Zwerdling.

"However, because The Post is widely read and Mr. Zwerdling's article has been distributed to and is now appearing in other newspapers, we believe it is imperative to identify major misstatements and distortions in this article."

The article, headlined "Spraying Dangers In the Air," was written by Zwerdling with a financial grant from The Fund for Investigative Journalism, but Dow said the fund had disclaimed any responsibility for the article's accuracy.

"The most grievous error in the article," Dow said, "is the statement that 'recent studies by EPA and the Dow Chemical Co. indicate tha the dioxin in 2, 4, 5-T may be slowly poisoning the general population.'

"That simply is not ture," Dow said, "there is no evidence that supports this allegation. To the contrary, all studies completed to date refute this charge."

Dow said the article included erroneous reports on laboratory studies that, despite assurance from Mr. Zwerdling the data would be forthcoming, the writer has failed to substantiate in the more than one month since the article was first published.

"For whatever reason, carelessness or misinterpretation of toxicologists' reports, Mr. Zwerdling has not only erred in his facts," Dow said, "but he has compounded the mistakes with distortions of the extensive record of laboratory and field investigations of 2, 4, 5-T use over a 30-year period."

U.S. Assistant Secretary of Agriculture calls conservation a 'national imperative'

Lebanon County Conservation District officials were among the more than 4,000 people that attended the National Association of Conservation Districts Annual Meeting in Honolulu. District Chairman George Wolff; director, Donald Bollinger; and executive assistant, Clair Gerberich were among those in attendance.

Assistant Secretary of Agriculture, Robert W. Long addressed the conservationists on the topic "A National Imperative". He told the local conservationists that you face perhaps the greatest opportunity in the 39-year history of conservation districts. I hope you will seize that opportunity and I give you three reasons why you should:

First, the upcoming critical need for food dictates that the time in the history of this planet is at hand to keep soil movement at the absolute minimum. Self evident financial advantages to land owners, the welfare of the future generations (both on and off the land), and powerful national and international forces compel such action. District Supervisors, long skilled in explaining to farmers the benefits of good land and water management, bear the primary responsibility for getting this job done.

Second, the national drive for clean water compels curbing soil losses by erosion. There is a consensus on the part of Americans - a mass determination to clean up our rivers, streams, and lakes - a determination that silt and other residual agricultural pollutants should not be carried at will by water or wind into our waterways.

Third, and finally, as I said earlier, to fail to effectively manage soil losses by voluntary action does harm to a precious heritage, freedom.

The national tendency toward seeking Federal government answers to difficult problems - seeking cash handouts and standardized solutions - needs to be reversed. In fact, our democratic republic stands in jeopardy unless we are successful in achieving such a reversal.

Soil losses, as such, as you know, have also been closely associated with the fall of civilizations. History is lined with dead civilizations - civilizations that allowed their land to get away from them. Too much of the land on this globe has for too long been over-cropped, overgrazed, and over-cut. Huge deserts, vast wastelands and barrel hillsides are products of this destruction.

Food production, taking the world as a whole, must be doubled in the next 25 or 30 years if supplies are to keep pace with the mushrooming population. And U.S. farmers will play an important role in that production.

Certainly, the estimated annual movement of 4 billion tons of U.S. soil by wind and water - topsoil that would take many years to replace - can no longer be tolerated by an enlightened society.

The achievement of "pure" water by 1985 as a national goal is mandated by the Federal Water Pollution Control Act Amendments of 1975, commonly known as "The Clean Water Act." It directs the Environmental Protection Agency (EPA) to restore and maintain "the chemical, physical and biological integrity of the nation's waters." The legislation requires major reduction of the discharge of pollutants into the nation's streams, lakes, and reservoirs to the extent that by 1985 we will have achieved "drinkable" status of all of these waters.

This goal is far more ambitious and infinitely more expensive than the one that called for placing a man on the moon.

Silt, sediment, fertilizer nutrients, chemical residues, animal wate and salts - all of these are pollutants. (The final regulations concerning "concentrated animal feeding operations" will soon be out.) But, silt is by far the most serious agricultural pollutant.

Is the 1985 date for elimination of these pollutants firm? No one knows. But there will be pressures on Congress to modify the deadline date.

However desirable clear, clean, pure water may be, it is ironic that farmers should face a directive from Washington of this magnitude when upcoming global food needs represent, by comparison, an even more compelling reason to conserve topsoil.

The record of conservation districts is nothing short of phenomenal. In less than 40 short years you have helped put roughly one-half of all U.S. farm land under excellent conservation protection. Many other owners are waiting for SCS professionals to help them formulate and carry out such plans. You have aided conservation planning one more than 600 million acres of privately-owned land; designed or laid out 2 million farm ponds; 1.2 million miles of terraces; contour lines for 29 millinn acres of strip-cropping; and planned no-till or minimum tillage operations on 32 million acres.

Few others have done more for their country.

I have noted that civilizations - Egypt, Mesopotamia, Greece, Italy, and other areas - eroded and deteriorated as their land wore out, as it washed and blew away. This must not happen to America. And it will not happen. You have the power of dedication and persuasion, the devotion to good husbandry, a love for the land, and sufficient knowledge of the alternatives to conservation achieved by voluntary action to bring completion to the task you started nearly one-half a century ago.

This is - a national imperative!

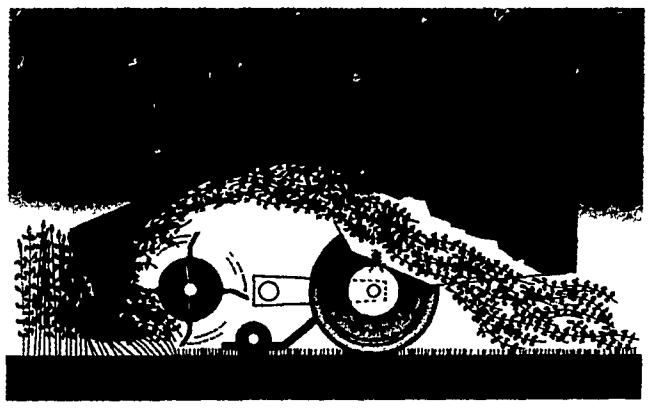
OUR NEW 9-FOOT CUT/DITIONER DOES EVEN MORE FOR LESS MONEY

Farmers tell us our 7-foot Cut-ditioner does more work than a 9-foot mower-conditioner. Why? Because it's a plug-free machine. So just imagine what our new 9-foot 279 Cut-ditioner will do! You save hundreds of dollars in terms of initial equipment cost, plus get more work done faster. The 279 is a better way to get high-quality, faster drying hay in both heavy and light crops. Whatever your operation: chop, bale, stack, or bigroll!

The New Idea 9-foot Cut-ditioner is a high-capacity machine with a minimum of moving parts to wear out and maintain. And it's versatile. In addition to cutting, conditioning, windrowing and swathing, it can be used to ted,



turn windrows, trim pastures and gather and condition crop residues. Because of this versatility, farmers called our original 7-foot Cut-ditioner the "Hay Thing."

You can still buy the popular 7-footer that does more for less money. And, now we've got a bigger "Hay Thing" going for you, the new 9-foot Cut-ditioner that does even more for less money.

It's your choice. We made both to suit your particular needs. But one thing's for sure - when you buy either Cut-ditioner, you'll have it around to do a lot of work for a long time. It's the non-stop, trouble-free, low-cost way to make high-quality hay.

Ag Council launches stand together campaign

WASHINGTON, D.C. — Officers of the Agriculture Council of America announced plans today for their first nationwide organizational effort designed to gain financial support from individual farmers for an expanded program to communicate with urban consumers.

Focusing on the theme "Stand Together. Let's tell America what farming means to this country", this effort will bring about direct contact with farmers and farm-related businesses in local communities all across the country. Local coordination will be provided by farm equipment companies, farm supply cooperatives, commodity associations and farm media coast to coast, who will display special materials urging farmers to provide financial support and get involved in ACA's program.

"The time has come when the five percent of us who are farmers have got to establish a more direct, a more open and a more realistic relationship with the 95 percent who are not farmers," said E. L. (Shug) Hatcher, ACA's Chairman, who is a wheat and beef producer from Lamar, Colorado.

Hatcher said pilot communications programs developed and tested first on a regional then national scale "have strongly emphasized that the people-to-people approach will work. People are concerned about the outlook for food. They realize that our ability to produce is one of the greatest challenges this nation and the entire world must face."

The first phase goal of the effort, as materials go into nationwide distribution over the next six months, is to attract 5,000 new individual farmer members. Individual membership is $25 and membership for local farm-related businesses is $100. "Added to our present base of about 1,000 farmers and 350 companies and organizations, this will provide the foundation for building genuine grassroots support in all major farming areas of the country," Hatcher said. "Funds from this initial effort will help us greatly expand grassroots contact in the cities."

Hatcher noted that materials are already in distribution and should begin appearing in farm communities within the next 30 days. "The support we have received from the farm equipment companies and other supporters of ACA is a great example of broad-scale cooperation and coordination," he added.

Also participating in the announcement, Wallace H. Lloyd, Jr. of Deere & Company and Chairman of ACA's Advisory Council, commented that "our company believes ACA is the vehicle agriculture needs to communicate to key audiences at the national level. We have asked our 2,500 dealers to join and do everything they can to give their customers an opportunity to get behind this farmer-oriented group and get their story across."

International Harvester also has begun distributing materials to its dealers, according to John Dierbeck, Jr., Public Relations. I-H dealers have already been briefed on the effort at major meetings.

Agriculture Council of America Chairman, E. L. "Shug" Hatcher, a wheat and beef producer from Lamar, CO outlines ACA plans for a nationwide grassroots campaign to attract support from individual farmers at a meeting with farm media in Washington, D.C.

Massey - Ferguson, Hesston Corporation, J.I. Case and Allis-Chalmers are other manufacturers who have announced plans to involve dealer organizations. In addition, farm magazines, newspapers, radio and television stations are volunteering to support the effort through editorial endorsement and public service appeals.

Citing ACA's growth over the past two and one-half years, Hatcher said, "We now have the foundation to move forward and expand in a realistic and progressive manner. We don't expect miracles or overnight success, but we do expect solid results based on growing confidence that what we have set out to do can be accomplished.

"The people I've worked with in ACA believe deeply that we can reach the consumer, and that the way to do it is to get more of the nation's farmers and others at the local level involved. It's their story that must be told."

Anyone interested in helping with this effort should write ACA, Box 23421, Washington, D.C. 20024. A brochure describing all available materials will be sent on request.

Swine housing spotlighted

LANCASTER — A swine housing conference on Thursday here at the Quality Court Motel drew 48 participants from Pennsylvania, Maryland and New Jersey. The conference was sponsored jointly by Penn State and PennAg Industries Association, a trade organization of Pennsylvania agribusiness firms.

Most of the participants were people who sell to farmers. They came to learn about new developments in swine housing, and how they affect farmers' management and financial operations. All of the instructors for the day-long program were Penn State staffers.

Dwight Younkin covered basic swine housing considerations, looking at design criteria, management systems, labor saving devices and remodeling.

Strutures and manure handling were discussed by Roger Grout, while Joseph McCurdy talked about environmental controls for hog houses. Virgil Crowley examined the various economic factors that must be considered in evaluating new and remodeled housing facilities.

A panel discussion on hog management capped the program. Virgil Crowley, in response to a question from one of the conference participants, said that in order to evaluate the economics of particular hog houses, producers should figure that they will be selling hogs for $36 to $40 per hundredweight for at least the next few years.

In response to another question from the floor, Younkin said he believes the recent outbreaks of hog cholera in Massachusetts, Rhode Island and New Jersey have been pretty well contained. He said he doesn't think hog cholera is going to have any affect on market prices.

Dairy situation brightens

WASHINGTON, D.C. — Farm milk prices are now averaging about 10 to 15 percent higher than a year ago, according to USDA figures released this past Monday. But they add that they're still below last December's peak.

The report predicts that the milk-feed price ration will continue to be favorable and per capita consumption of dairy products is up. Dairy imports were down and cash receipts from dairying were up last year.

Farmers received an average of $10.00 per - hundredweight for milk in February. That's up $1.72 from a year earlier, but still 30 cents below December's record high ... Milk-feed ratio, which improved greatly last year, will likely continue to encourage heavier concentrate feeding.

Percapita consumption of dairy products, at 546 pounds last year, up slightly from 1974 - only the second increase in recent years. Per capita butter consumption was up for the first time since 1968, while cheese consumption declined for the first time in more than a decade.

U.S. butter production continued off during January, but January output of American cheese was up sharply, USDA reported.

The 94.3 million pounds of butter output was the highest since last May. But, it was off three percent from a year earlier and the 9th straight month it has been below that of a corresponding month a year earlier.

Reason for the January cutback: Sharply reduced production in Minnesota. Wisconsin's output, at 21.3 million pounds, was up 9 percent from a year earlier; and California's production, at 13.7 million pounds, was up 25 percent from Jan. 1975. But, Minnesota's production, at 16.8 million pounds, was off 22 percent from a year earlier. The three States accounted for 55 percent of the national total.

Meanwhile, American cheese production totaled 149.3 million lbs. for the month, up 14 percent from a year earlier. Higher output in both Wisconsin's production, at 67.0 million pounds, was up 18 percent from a year earlier; Minnesota's output, at 26.6 million pounds, was up 23 percent from Jan. 1975. The two States accounted for 62 pct. of the national total.

Forestry incentives program announced

WASHINGTON — The U.S. Department of Agriculture announced 1976 funding for the Forestry Incentives Program (FIP) at the $15 million level authorized by Congress. The FIP is a continuing program designed to increase the production of timber products on small, private timber tracts.

In its third year of operation, FIP will again be available in most states in specifically - designated counties with high resource potential for increased timber production. Both annual and long-term agreements will be offered to eligible owners of non-industrial private forest lands. Federal cost-sharing under these agreements will range from 50 to 75 percent of the cost of carrying out tree planting and timber stand improvement practices. All FIP agreements must be based on forest management plans developed by the local forester in cooperation with the landowner.

FIP is administered by the Agricultural Stabilization and Conservation Service, in consultation with the U.S. Forest Service and State Foresters.

Red Lion YF officers chosen

The Red Lion Area Young Farmers recently held their annual banquet with close to 200 members and guests in attendance. Officers and advisors of the group standing, left to right: Terry Martin (guest) vice president of Region 4 from Chambersburg; Donald Grove, past secretary of the Penna. Young Farmers; Jack Dehoff, president of RLAYF; and John Myers, advisor. Front row, l.-r.: Lester Holtzinger, public relations; Roy Jackson, Jr., secretary; Robert Burchett, treasurer. Vice president Clarence Godfrey was not present.

New York milk prices announced

NEW YORK - A uniform farm price of $9.80 per hundredweight (46.5 quarts) for February milk deliveries to pool handlers under the New York-New Jersey marketing orders was announced recently by Thomas A. Wilson, market administrator. The uniform price was $10.13 in January 1976 and $8.09 in February 1975.

The butterfat differential was 9.3 cents for each tenth of a pound of fat above or below 3.5 percent.

Receipts from dairy producers totaled 742,156,017 pounds, 3.3 percent or 23,634,488 pounds more than in February 1975, Mr. Wilson reported. Handlers utilized 362,848,481 pounds of these receipts or 48.9 percent for fluid milk products (Class I). In February 1975 the Class I utilization percentage was 53.3. For February 1976, handlers paid $11.48 for Class I milk compared with $9.20 a year ago.

Mr. Wilson stated that receipts on bulk tank units were 717,433,108 pounds, up 29,520,368 pounds. He added that this was 96.7 percent of the pool, compared to 95.7 percent a year ago.

A total of 375,096,268 pounds, or 52.3 percent, of tank milk was used as Class II and was subject to the transportation credit which amounted to $375,096.30.

Producers with tank milk numbered 18,078, a decrease of 4.0 percent. The administrator said that the total number of producers in the pool was 19,376, a loss of 6.1 percent. Average daily deliveries per producer rose 77 pounds to 1,321 pounds.

Pool bulk tank units decreased 27 to 186. Reports from 113 handlers were used to compute the pool, 4 less than in February 1975. There were 107 handlers with producer milk.

The gross value to dairy farmers of February milk deliveries was $73,824,400.18. Mr. Wilson explained that this included differentials required to be paid to dairy farmers but not voluntary premiums or deductions authorized by the farmer.

All prices quotes are for milk at 3.5 percent butterfat received within the 201-210 mile zone from New York City.

Serviceman takes training

Gerald Wyble, serviceman for A.B.C. Groff, Inc., New Holland, returned from a week-long training program at the Sperry New Holland Service Training Center at New Holland, Pennsylvania. While at the center he attended sessions in the service and repair of a wide variety of modern farm machinery.

Wyble, who resides in New Holland, has been an employee of A.B.C. Groff's for 1½ years.

Higher milk support levels won't raise store prices, Eastern economist says

SYRACUSE, N.Y. - New stories carried by a major wire service this week erroneously implied that the new support price for milk would rise milk prices to consumers by 3.6 cents a gallon, or nearly one cent per quart.

Joseph C. Mathis, economist for the 8000 diary farmer member Eastern Milk Producers Cooperative, in rebuking these stories, stated that current market prices for manufacturing milk and for the supported end products are at or above the new support price levels. Retail prices won't increase as a result of the price support increase. Market prices (both at wholesale and at retail) are determined by supply-demand conditions, not by the government support price level.

On March, 3 Secretary of Agriculture, Earl Butz, announced that the support price for manufacturing grade milk would be restored to 80 percent of parity, effective April 1. The new support price will be $8.13 a hundredweight for milk of national average butterfat test (3.68 percent in 1975). This is equivalent to $7.94 a hundredweight for milk testing 3.5 percent butterfat. The current support price of $7.71 for milk of average fat content (7.55 for 3.5 percent milk), which represented 80 percent of parity when it became effective on October 1, 1976, is only 76.5 percent of the current parity level.

In order to achieve the new support level, the government-owned Commodity Credit Corporation will purchase butter at 87¾ cents a pound (at New York), nonfat dry milk powder at 62.4 cents a pound, and cheddar cheese at 90½ cents a pound. These purchase prices represent increases from current C.C.C. prices of 6½ cents a pound for butter, no change for powder, and 5½ cents for cheese.

Both wholesale and retail prices for milk and dairy products have been forecast to decline during the forthcoming seasonal increases in milk supplies - and they may do that in spite of the new support prices announced this week. Hopefully, the new support prices will help to forestall a drastic reduction in prices to farmers. With production costs continuing to rise, many dairy farmers simply could not survive another period of depressed milk prices.

April milk prices set

ALEXANDRIA, Va. — Market Administrator Joseph D. Shine announced that the Class I (fluid) milk price for Federal Order No. 4 will be $11.03 per hundredweight in April 1976, a drop of 65 cents from the March price. The Class I price was $9.63 last April. Prices are announced for milk testing 3.5 percent butterfat, f.o.b. plants located within 55 miles of Philadelphia, PA and also within 75 miles from the nearer of Washington, D. C. or Baltimore, MD. A six-cent per hundredweight direct-delivery differential is applicable for producer milk received at plants located within 55 miles of Philadelphia.

At the same time, Mr. Shine announced a Class II milk price of $8.29 per hundredweight for the month of February, 1976 and a February producer butterfat differential of 9.3 cents for each tenth of a pound of fat.

The Market Administrator stated that these Class prices are based on a February 1976 Minnesota - Wisconsin manufacturing milk price of $8.25 per hundredweight at 3.5 percent butterfat.

If we can't get you an extra pint per cow per day you win $50...

FREE

Free Equipment Test

Right now, your participating Surge dealer is offering you a unique chance to make him put his money where his mouth is First, he'll come to your farm, and at no cost or obligation to you, he'll do a complete analysis on your vacuum system

$50

$50 is yours if he can't improve your production a pint per cow per day.

Once your Surge dealer has finished his evaluation, he'll level with you If your system needs work, he'll tell you, and offer to put it in top shape. I—S district 5 meets

By SUSAN KAUFFMAN
Feature Writer

LANCASTER — "I have nothing but good news for you today," Boyd Gartley told the members of District 5 of the Inter-State Milk Producers Cooperative at their annual dinner meeting held at Meadow Hills Dining House, New Danville Rd., March 4.

Gartley, director of member and public relations for Interstate, came attired in a "Spirits of 1776" costume complete with a Pennsylvania coon skin cap, an antique Pennsylvania rifle made by J. Cline in 1835 and an antique milk bottle filled with powdered milk. Throughout the year Mr. Gartley is promoting through his costume and his speeches many valuable ideals of the past. Several "Spirits" he enumerated were the spirit of respect, of awareness of others, of frugality in all things not just money, of independence, of agronomy, of thankfulness, of Godliness and of hope as found in the new generation.

Moving from the general to the specific, Mr. Gartley addressed the dairy farmers attending and praised the Inter-State organization as a whole for its "real cooperation, honesty, integrity and longevity as an organization." "This co-op yields more to the farmer than any other farming co-op," he explained.

Giving credit to the Young Cooperator program, Gartley explained a one-page six months financial report now accompanies milk checks so farmers can get a better picture of the actual market demands and costs changes.

Stressing the legal arm Inter-State projects, Gartley pointed to the Feb. 13, 1976 United States District Court ruling that all eight dealers in South Central Pennsylvania must pay in more than $500,000 withheld from the Order 4 producer settlement fund by March 3. Withholding began June 1975 when Order 4 was expanded.

Gartley also stated that the PMMB has written a final order for Area 6 setting the Class 1 price at $10.20 per hundred weight for April through July. Prior to Inter-State's action this area received $9.17 cwt.

Giving part of the credit for the success of the Inter-State to finding more efficient marketing methods, Gartley explained action now being taken to re-align trucking routes in the future.

In closing, Gartley challenged the members in attendance to become more aware of "what is going on in the market place" and how it will effect them and secondly to plan, to invision, new possibilities in marketing their products such as making the butterfat content unsaturated. "You have the best product and the best cooperative; Keep communication lines open and there will be fewer problems for all of us," Gartley concluded.

J. Wade Groff, recently elected director for the new District No. 5 presented awards to Mr. and Mrs. John Barley, The Young Cooperators from Conestoga and Snavely and Kenneth Garber, Willow Street R2 for 50 years' membership in Inter-State.

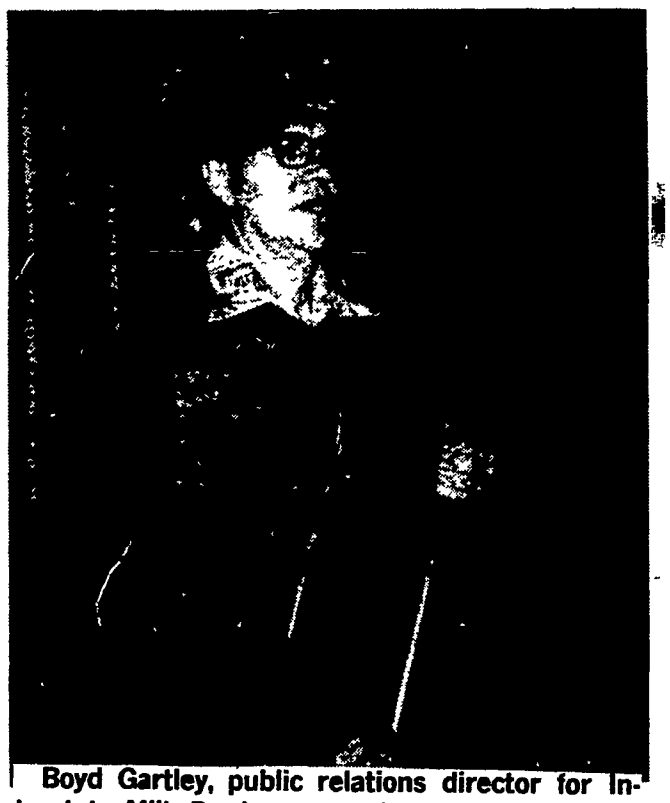
County Extension Agent Jay Irwin asked the group to see the "good old days are now; this is the best time ever right now." "America's strength is in agriculture. Foreign countries want our food not our cars or clothing," he stated. Irwin also proposed that the farmer take government intervention and "build it in your favor." By way of example, Mr. Irwin cited the October, 1976 deadline for pesticide certification for purchasing restricted use pesticides. "Agriculture has had bad publicity in the past; perhaps town people will better trust the farmer when they know he is certified."

Elections for the three locals in District 5 were held during the meeting. Millersville Local selected Nelson Habecker, president; Melvin L. Shertzer, vice-president; Kenneth L. Shertzer, secretary-treasurer; Jay E. Landis and J. Clayton Charles, delegates; and J. Robert Kindig and Christ Hess, Jr., alternates. Andrew H. Martin will serve on the Lefever Hauling Committee.

West Lampeter Local elected Henry B. Leaman, president; Arthur L. Breneman, vice-president; Jacob R. Houser, Jr., secretary-treasurer; Robert M. Mylin and John M. Harnish, delegates; and Harlan N. Keener and J. Mowery Frey, Jr. as alternates.

Witmer Local elected Harvey E. Heller, president; C. Richard Landis, vice-president; J. Donald Myer, secretary-treasurer; J. Donald Myer and J. Robert Esbenshade, delegates; and John L. Landis and Frank L. Hershey as alternates.

Fieldman Andrew Marvin announced a district meeting for the newly elected officers for March 9 at 7:30 at the Coca Cola Building, Lancaster and a bus trip to the Southhampton Inter-State office and Quality Control Laboratory the week of March 22.



Boyd Gartley, public relations director for Interstate Milk Producers, spoke on the "Spirit of '76" during a recent district meeting. Carrying an authentic rifle and antique milk bottle flask, Gartley's costume reflected the colonial spirit.

The B. Snavley Garber family was presented a plaque for having a collective 50 year membership. Pictured in front are B. Snavley and wife Barbara with children Thelma and Kenneth in the background.

Among the young farmers recently honored at the Octorara Young Farmers banquet were, left to right, Paul King, Bill Stoltzfus, and Titus Martin. King had the high dairy herd average, while Stoltzfus captured second place in that contest. Martin is standing in for Ben Beiler who had placed third. King also placed first for the high individual cow awards and Martin placed third. In addition, King was the number one corn silage producer in the group and Martin checked in with the best hay.

Octorara Young Farmers hold annual banquet

Approximately 120 young farmers and their wives met recently for the Octorara Young Farmers awards banquet.

"You have every reason to be proud of your Octorara Chapter," reported ag teacher Ivan Stauffer. "It is the only young farmers group in the state with two state officers in it!" Paul King serves as state president and Nelson Stoltzfus as state treasurer. "And both are doing a great job," added Stauffer.

Awards were given for high corn grain yields, corn silage tonnage, hay quality, high herd averages and high cow averages.

President Glenn Engle presided. Newly elected officers are as follows: President: Carl Horst; V. President: Glenn Engle; Secretary: William Stoltzfus; Treasurer: Nathan King; Public Relations: Nelson Stoltzfus.

Awards presented were as follows:

Corn Grain Yields

1st - Nathan King 181.2 bushels; 2nd - Carl Horst 181; 3rd - Earl Mast 170; 4th - Merle King 167; 5th - Clair Lapp 158; 6th - Ivan Yost 157.

Hay

1st - Titus Martin; 2nd Elmer Mast; 3rd Arthur Hershey.

Corn Silage

1st - Paul King 7.88 Tons TDN; 2nd - Larry Hershey 7.42; 3rd - Merle King 7.35; 4th - Nathan King 7.34; 5th - Elmer Mast 7.33.

High Herd Averages

1st - Paul King 16,938 milk 639 fat; 2nd Willowland Farm (Wm. Stoltzfus) 15,946 milk 606 fat; 3rd Ben Beiler 15,522 milk 590 fat.

High Individual Cow Arards

1st - Paul King 20,570 Milk 1007 fat; 2nd - Ben Beiler 21,089 Milk 891 fat; 3rd - Titus Martin 18,987 Milk 800 fat.

Lewis on Dean's list

Kenneth Scott Lewis, son of Mr. and Mrs. George Lewis of 606 Stony Battery Rd., Landisville, Pa. has been named to the Dean's List at Delaware Valley College. This announcement was made by Dr. Clinton R. Blackmon, Dean of the College, who pointed out that this high academic recognition is given to members of the Sophomore class who achieve a semester academic average of at least 3.3.

Milk floor prices raised

WASHINGTON - Secretary of Agriculture Earl L. Butz last week announced that the support price for manufacturing milk will be increased to 80 percent of parity, effective April 1. This support level will be subject to quarterly review and adjusted if necessary to assure an adequate supply of milk.

According to current data, a support level of 80 percent of parity would result in a support price of $8.13 per hundredweight for manufacturing milk as of April 1. The law requires that milk be supported at such level between 75 and 90 percent of parity as the Secretary determines necessary to assure an adequate supply of milk to meet current needs, reflect changes in the cost of production and assure a level of farm income adequate to maintain productive capacity to meet anticipated future needs. The Secretary said the increase in support announced is necessary to accomplish these objectives.

Consumption of nonfat dry milk has suffered serious declines in recent years and resulted in large Commodity Credit Corporation (CCC) purchases and inventories for which outlets have become increasingly limited. By assigning a larger proportion of the April 1 increase in the support price for milk to the purchase price for cheese, it was not necessary to increase the nonfat dry milk price, thereby preventing even further declines in its future use.

The purchase prices announced may be adjusted as a result of the quarterly reviews of the support level for milk, or at the beginning of each quarter as a result of changes in production, consumption, market prices, and CCC purchases of the various products.

PennAg encouraged by rail re-organization

EPHRATA — Members of Pennsylvania's feed and fertilizer industries and other agribusiness firms have been encouraged by recently enacted legislation which promises to keep the nation's railroads in the hands of private enterprise while at the same time improving rail service in the financially troubled Northeast corridor.

Commenting on the Railroad Revitalization and Regulatory Reform Act of 1976, Donald W. Parke, executive vice-president of PennAg Industries Association, said, "Many of the reforms contained in this legislation are points made at one time or another by PennAg members.

"It has been a long hard road, but improvement is on the way."

PennAg is a trade association of Pennsylvania agribusiness firms. Parke made his comments in the March issue of "The Grist", the association's monthly publication for members.

"The major purpose of the act," Parke said, "is to reform regulatory procedures and to help a sick industry stay in the private sector. Railroads will be given a free hand to set rates, and the ICC (Interstate Commerce Commission) can only intervene when it's shown that a single rail carrier dominates a particular market. However, a carrier may not lower its rates to destroy competition."

Another provision of the Act which Parke felt will help non-professional rail users is the establishment of a permanent Rail Services Planning office within the ICC. He said there'll also be a permanent office of Rail Public Councel, similar to the one provided for in the Rail Reorganization Act.

"This office did an effective job of obtaining and organizing non-professional shipper views on changes in the recent hearings in the Northeast and Midwest under the Rail Reorganization Act. Thus it inserts a sort of consumer's advocate office in rail transportation matters," Parke noted.

On the subject of abandonments and discontinuance of service, the law requires the ICC to gather data from all railroads, except the bankrupt carriers in the Northeast and Midwest, on all rail lines they consider excess. Machinery is set up for disposal of those lines. However, where there is a legitimate contest, there is a five-year subsidy program established for freight service with the federal government picking up 100 percent of the first year costs, 90 percent the second and declining to 50 percent the fifth year.

The Act provides funds for a number of improvements to the nation's rail system, some in the form of loans and some in the form of outright grants. One significant portion of that funding, especially for Pennsylvanians, is the appropriation of $200 million for the electrification of the route between Harrisburg and Pittsburgh.

"Another interesting note," Parke said, "was the fact that AMTRAK has been given the authority to operate all the track in the Northeast Rail Corridor - from Boston to New York.

"That authority includes funds to upgrade track and facilities, with the stated objective of providing two-and-a-half hour service between New York and Washington by 1980. Also included in the AMTRAK operation will be the lines to Harrisburg, Pa., and Albany, New York."

Holstein events planned

STATE COLLEGE — The Pennsylvania Holstein Association has announced plans for one of the country's major Holstein events of 1976. Involved are two consignment sales and the State Holstein Show scheduled for March 25, 26, and 27. All events are to be held at the Farm Show Building in Harrisburg.

The schedule is as follows: Thursday, March 25 - Pa. State Calf Sale; Friday, March 26 - Pa. State Cow, Bred Heifer, & Bull Sale; Saturday, March 27 - Pa. State Holstein Show.

Close to 200 head of registered Holstein calves under one year old have been consigned to the Calf Sale and will be sold at auction. The following day's sale will feature 100 bred heifers and 18 cows of which two are Excellent and 10 are Very Good. Also featured will be six exceptional-pedigreed young bulls.

Both sales are managed by the Pennsylvania Holstein Association. Hired as auctioneers are the R. Austin Backus, Inc. Sales Organization, Mexico, New York and A. Doty Remsburg, Jefferson, Maryland.

The 23rd annual State Holstein Show closes out this week of Holstein activities. Mr. John Morris, Extension Dairyman for the State of Maryland, will have approximately 350 head paraded before him. This show has always been known for its quality and large number of animals exhibited. By the time 8:30 a.m. rolls around, the bull calves will enter the large arena which starts a day full of excitement and maybe a few surprises.

In past years nearly 75 percent of the consignments to the Calf Sale were purchased by out-of-state buyers.

What's New

Creston introduces new feeder wagon

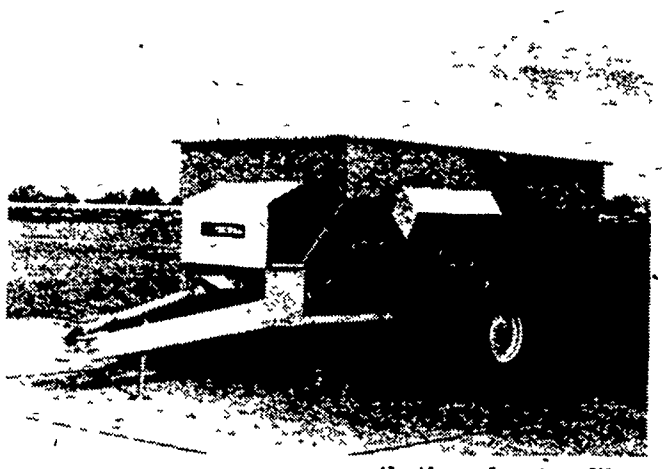
CRESTON, Nebraska - Creston Mfg. Co. has introduced a new feeder wagon for delivery of all feed rations including dry chopped hay or moist bulk materials. Designated model F-130 RAPID TRANSIT, the new unit has a 130 bushel capacity, and operates from tractor PTO.

The Rapid Transit features a new simplified design with few parts to wear.

It replaces the troublesome longitudinal chain-blade mechanism with husky augers and eliminates forward elevator by an angularly positioned 32" wide delivery system. The discharge unit picks up at the foreward end of the augers. Also eliminated are the drive gear boxes used on older type machines.

Company spokesman report that the Rapid Transit will fill bunks accurately without slowing down, and in the distance other feeders discharge 100 bushels the F-130 will discharge 130 bushels uniformly.

The basic construction of



the F-130 is heavier than other similar equipment. Bottom is 10ga. sheet steel and side walls are 12ga. thickness. Augers have three-sixteenth sectional flighting.

The foreward position of the discharge gives good vision from the tractor seat.

Netting Available

Nothing can spoil a family's camping trip faster than an invasion of mosquitos, black flies, punkies or other biting insect pests. If tent flaps and window openings aren't screened; bunk or bedrolls are without a mosquito-bar ... irritation has an open invitation.

So it's good news to know that a new, lightweight insect netting is made with synthetic polyester fiber, knitted in a non-ravel Fablok stitch. It is available in 3 yard lengths, 45" wide, washable and stain-resistant. Unlike cotton, polyester netting will not mildew. There is enough material in the 3 yard length to cover the opening of a tent flap; make a couple of window screens and also make an insect "hood" to wear under your hat. The netting is easy to sew by hand or machine. It can also be stretched on wood or metal frames, if desired. Smart campers won't leave home without it.

Available only by mail from Nets Unlimited, Rogers Road, North River, N.Y. 12856. Cost - $5.95 postpaid (residents of NY State add sales tax).

Land Resources Map Aid to Planning

Locations and descriptions of 153 Pennsylvania soil groups are available at an educational, non-profit cost of $3.00 in the Land Resources Map of the Commonwealth, published by the Agricultural Experiment Station at The Pennsylvania State University.

Presenting land resources in graphic form, the map is unlike anything published previously for Pennsylvania. It brings together factors of soil depth, drainage, available moisture, and productive capacities of soils.

The map has been used widely by industrial and community planners, Penn State officials report. High school and college teachers find it helpful in studying earth sciences. It was developed by Howard W. Higbee, professor emeritus of soil science, who considers it vital for soil and water resource managers.

Multiple patterns and colors are used to portray the 153 soil groups - coded and symbolized for identification. Each soil unit or group is evaluated by 16 characteristics. The more important characteristics are depth, soil drainage environment, geoglogical source of soil material, available moisture, plant rooting zones, and dominant crop production.

Copies are available for the $3.00, plus 18 cents state sales tax, from Land Resources Map, Box 6000, University Park, Pa. 16802. Make check or money order payable to The Pennsylvania State University. The map may also be purchased directly in room 232 of the Agricultural Administration Building at University Park. The office is open from 8 a.m. to 5 p.m., Monday through Friday, except holidays.

Bank officers retire

Three members of the Board of Directors of The First National Bank of Strasburg retired recently. They are L. H. Brubaker, J. Lloyd Harnish and Albert F. Witmer.

Brubaker became a Director in 1946 and was elected Secretary of the Board in 1969. He has served in that position since. He is retired president of L. H. Brubaker, Inc. and has been active in business and religious organizations. He is a member of the Christian Businessmen's Association, Farm Implement Dealers Association, Lancaster County Bankers Association and the Gideons, where he served as president. He has also been active in the Strasburg Mennonite Church.

Harnish was elected to the Board in 1965 and has served as Chairman of the Board since 1971. He is a retired farmer and has been active in business and agricultural associations. He was manager of the West Willow Farmers Association, a director of Goodville Mutual Casualty Company, and a member of the Lancaster County Bankers Association. He has also been active in the Lampeter Fair Association.

Witmer began his banking career in 1912 with the Union Trust Company of Lancaster. He joined The First National Bank of Strasburg in 1943 as Cashier and Director. In 1963 he retired from the Bank as Cashier and remained an active Director. In 1974 he was honored by the Pennsylvania Bankers Association for his service to Pennsylvania banking.

During his long banking career, Witmer has been active in many business, professional and civic organizations. These activities include Director of Lancaster Federal Savings and Loan, member and past president of the Lancaster County Bankers Association, Trustee and Treasurer of Water Street Rescue Mission, member and past president of the Lancaster Chapter of the American Institute of Banking, member of the Board of Pensions of the Eastern Pennsylvania Conference of the Methodist Church and member of the Masonic Fraternity Lamberton Lodge No. 476.

Lung screening planned

The March program of pulmonary function testing conducted by the Lancaster County Lung Association is announced by Miss Velma Hart, Executive Director. Tests will be conducted on Tuesday, March 23, 1976 at the Association office, 630 Janet Avenue. Hours will be from 4 to 8 p.m. and testing is done by appointment. Cost of the test is $2.00. Call 397-5203 to make an appointment.

This screening measures lung capacity. It is useful in diagnosing symptoms of lung disease. Persons experienceing breathing difficulty or who are heavy smokers are advised to have the test. Tests are conducted by a respiratory therapist and the results interpreted by a pulmonary specialist.

Grain reserves advocate to speak at Pa. Food Day

HARRISBURG — Sen. Dick Clark of Iowa, an advocate for grain reserves, will be the principal speaker at the Pennsylvania Food Day Panorama April 7 at the Penn Harris Motor Inn, Camp Hill.

Clark, a member of the Senate Agriculture and Forestry Committee, has called for a grain system that would not be used to depress prices but would provide for a stable supply in lean years.

The senator's concern for stability in agricultural prices is expected to be underlined in his address at the Food Day banquet. Other speakers, including Gov. Milton Shapp, will appear throughout the day at the Penn Harris convention room to discuss the entire range of Pennsylvania agriculture — from the farmer to consumer.

Agriculture Secretary Raymond J. Kerstetter, chairman of the Food Day observance, noted that this year representatives of the major farm organizations, food distributors and processors and consumer groups have been invited to present displays and conduct workshops in the large, oval-shaped convention room of the Penn Harris Motel.

"We know there is hunger in the world because of food production and distribution problems," said Kerstetter. "This administration for the past several years has tried to focus attention on the need for a national food policy that rewards its farmers adequately for producing an abundant supply of reasonably priced food for consumers here and abroad."

Kerstetter explained that this year the Food Day event will focus on "what we in Pennsylvania are doing about the food situation. The emphasis," said Kerstetter, "is on examining our own food distribution system, its weaknesses and strengths, and trying to improve upon it.

"Pennsylvania," Kerstetter continued, "is a cog in the world agricultural machine. If we can make our part run smoothly, the entire apparatus will be helped."

About 200 people are expected to attend the observance. Adhering to a theme that no one segment of agriculture can live alone, three distinct exhibit areas will be set up — Pennsylvania Producers; Food Marketing and Distribution; and Consumer Education and Outreach.

Clark, who will be the evening speaker, became prominent two years ago when, in the face of rapidly declining grain stocks that exerted inflationary pressures on food and brought on the spectre of famine in some parts of the world, he called for a buildup of grain reserves.

"A good grain system," Clark had said, "will help combat inflation in this country by providing additional supplies when grain prices start rising rapidly. It will help farmers achieve a degree of stability they have never known and it will make a substantial contribution to preventing starvation in various parts of the world."

The grain reserve system was never adopted.

Babcock executive promoted

Edward A. Whitehead's performance as director of commercial poultry operations in Lititz for Babcock Industries has earned him a promotion to vice president of domestic poultry operations.

Company President Bruce M. Babcock said Whitehead will have responsibility for technical services, marketing, production and operations.

According to the company, Whitehead effected a "major turn-around in operating efficiency and profitability" while in Lititz.

Whitehead said his main job will be to create unity on the Babcock marketing staff and to respond directly to customer needs. "Our main challenge," he said, "is to reinforce the marketing efforts of our customers and to be aware of their needs and respond to these needs."

Whitehead will work out of Ithaca, N.Y., headquarters.

Farm management seminars slated for horsemen's meetings

WASHINGTON, D.C. — Farm management sessions, designed primarily for the small and mediumsized horse farm operation, highlight the program for the first NATIONAL HORSEMEN'S SEMINAR, April 2-4, 1976, at the Sheraton Inn, Fredericksburg, Virginia. Other topics during the three-day event are aimed at the larger farms, while many sessions should appeal to all equine enthusiasts. More than fifty sessions in all will be presented.

According to John G. Hagan, owner of the Rapidan River Farm, Lignum Va., General Chairman of the Seminar Committee which arranged the impressive schedule, "Our primary purpose is to present a program which all horse people will find interesting and informative. This all-breed seminar is a once-in-a-lifetime educational opportunity for beginning as well as experienced horsemen and horsewomen, adult and youth, from every state in the nation. Registrations are being received at a heavy rate; an exceptionally large turnout is expected. While there is no cutoff date for registering, rates for adults and youths will increase after March 15. I urge everyone who is planning to attend but who has not yet registered, to do so now," Hagan said.

Among the seminar topics and speakers covering the general area of business management and economics, in order of appearance, are: Friday, April 2 — "HORSE FARMING - BUSINESS OR HOBBY," Thomas A. Davis, American Horse Council, Washington, D.C.; "INSURANCE - HORSES AND HORSE FARMS," C. Fred Kohler, Kohler Bloodstock of Virginia, Inc., Middleburg, Va.; "HORSE FARM MANAGEMENT," Jack Conner, Rapidan River Farm, Lignum, Va.; and "SO YOU WANT TO GET INTO THE HORSE BUSINESS!" Dr. Robert G. Lawrence, University of Maryland, College Park, Md. Saturday, April 3 — "BEEF CATTLE SYSTEMS FOR THE HORSE FARM," Dr. A. L. Eller, Jr., VPI and SU, Blacksburg, Va.; "HORSE FARM FACILITIES PANEL," Larry W. Umstadter, ATALCO Corp., Charlottesville, Va., Dr. Harold Hughes, VPI and SU, Blacksburg, Va. and Peter J. Williams, P. J. Williams Co., Broad Run, Va.; "RECORD SYSTEMS FOR HORSE FARMS," John T. Conner, Rapidan River Farm, Lignum, Va.; and "PASTURE - ESTABLISHING AND MAINTAINING," Dr. Eller.

Sunday, April 4 — "HAY EVALUATION," Dr. Harlan White, VPI and SU, Blacksburg, Va.; and "MARKETING OF HORSES," L. Clay Camp, Glenmore Farm, Keswick, Va. and Mike Jennings, Flying J Ranch, Leesburg, Va.

Live demonstrations at the indoor arena of the nearby Rapidan River Farm will allow seminar attendees to observe first-hand expert horsemanship and horse training by highly qualified specialists.

Demonstrations scheduled are as follows:

Friday, April 2 — "FITTING - TRAINING - SHOWING THE PLEASURE AND PARK HORSE," Robert and Judy Whitney, Rapidan River Farm, Lignum, Va.

Saturday, April 3 — "DRESSAGE TRAINING," Tom Poulin, American School of Dressage, Fairfield, Maine.

Sunday, April 4 — "HUNTER DEMONSTRATION" and "JUMPER DEMONSTRATION," Walter J. Lee, Belcort Farm, Keswick, Va.; "PASO FINO HORSE DEMONSTRATION," Dr. Ted Rozema, Rancho del Rosa, Tryon, N.C.; "WESTERN PLEASURE DEMONSTRATION," Pete Bowling, Flying J Ranch, Leesburg, Va.; and "REINING DEMONSTRATION," Nic Zemo, Frederick, Md.

Registration fees for the seminar are $100.00 adult for full registration, $30.00 youth (18 years and under) for full registration; special daily rates are $50.00 per day adult, $10.00 per day youth. After March 15, all registrations, adult and youth, are $120.00 full and $60.00 daily.

The Sheraton Inn, headquarters for the seminar and site of all lectures, panel discussions and visual presentations, is located at Interstate 95 and Va. Rt. 3, just west of Fredericksburg, midway between Washington, D.C. and Richmond, Virginia. Overflow accommodations will be assigned to nearby motels.

Complete seminar registration information is available from the seminar management firm, EMI, Inc., 1000 16th Street, N.W., Washington, D.C. 20036, telephone (202) 659-4605.

Agriculture

United States farmers comprise only 1 per cent of the world's total, yet in a normal year grow 15 per cent of the world's food. Approximately 20 per cent of all farm exports around the globe come from America. That includes half of all the grain distributed in international trade. More than 4 million tractors are now being used on our country's farms. After the turn of the century, 22 million horses and mules worked the fields of the nation.

Beef producers meeting slated

All beef producers of York County and surrounding areas are invited to a meeting on Monday, March 22 at 7:30 p.m. at the 4-H Center in Bair Station.

Two important beef tools will be discussed which will be important to all beef producers. The Rumensin Story by Dr. Dean Snyder, former York County veterinarian who is actively involved in the research of Rumensin will discuss the program. The Tramisol Story will be discussed by W. A. McClosky, who is the representative from the company will give the information on how the parasites affect your cows, steers, and calves. Refreshments will be served and all beef producers are invited to attend.

ANCA membership drive underway

DENVER, Co. — Some 2,000 members of the American National Cattlemen's Association will assume the role of modern "Minuteman," as they participate in an extensive membership campaign in the near future.

The goal, according to Merlyn Carlson, Lodgepole, Neb., Chairman of the Membership and Finance Committee of ANCA, is to enlist more than 3,000 new members by July 4. The "Minuteman" idea, utilizing the Spirit of '76 Bicentennial theme, was announced during the annual ANCA convention in Phoenix in January.

The "Spirit of 76" membership campaign runs from Feb. 1 to July 4, with added emphasis on April 19. That date is significant, since on April 19, 1775, the first battle was fought by Minutemen, at Concord.

In explaining the Minuteman idea, Carlson said, "The combined individual efforts of the original Minutemen in Revolutionary War times helped bring independence to this great country. When we considered the valuable role of an individual, motivated to service on a minute's notice, we could think of nothing more appropriate than to involve the nation's cattlemen in a membership program to support our cattle industry.

"Furthermore, the Minuteman theme is appropriate in that we are asking each participating ANCA member to take only a few minutes of his own time and enlist at least one other cattleman as a member of the Association. With all of the pressures on our industry from government, organized labor, consumer activist groups and environmentalist groups, we certainly feel the need for a strong organization speaking for all cattlemen."

Carlson added that "just to continue present programs at ANCA will require a broader membership base. The consequences of not achieving our goal will be a cut-back in ANCA effectiveness as a national spokesman for the beef cattle industry."

National Coordinator of the "Minuteman" membership drive is Tom Landers, of Hot Springs, S.D. Landers will work with state coordinators, and within each state, area coordinators will work directly with individual ANCA members who volunteered to ask friends and neighbors to join ANCA.

Fruits-vegetables get market boost

HARRISBURG - Locally grown fruits and vegetables may be more in demand these days as distant suppliers find it difficult to compete with ever rising transportation and energy costs.

This optimistic appraisal for Pennsylvania growers was expressed recently at the third annual Produce Marketing Conference conducted by the Pennsylvania Department of Agriculture.

Agriculture Secretary Raymond J. Kerstetter told the gathering that increasing transporation, energy and labor costs were beginning to reverse a trend set years ago when eastern wholesale buyers turned to the large western suppliers for plentiful, low-cost produce.

"Now," said Kerstetter, "the wholesale buyers are finding that costs of bringing in produce from the west are steadily climbing. I think we can look forward to a revival of produce production in the east to help meet the needs of the megalopolis stretching from Boston to Washington and points south."

One wholesale buyer at the conference noted that a truckload of western apples now cost him $2.20 a box in hauling charges, while in-state apples can be hauled to his warehouse for as little as thirty cents a box.

Another buyer, who also attested to increasing transportation costs, added that the designation "Pennsylvania grown" is finding great consumer appeal.

Producers and growers at the conference also noted that fresh produce was selling better than the processed varieties. This was attributed to a "back to nature" trend in which consumers want "to get back to basics in food . . ."

Hay groups interested in exporting product

The Board of Directors of The National Hay Association, Inc. recently held their Mid-Winter Board Meeting at the Holiday Inn French Quarter, New Orleans, Louisiana. Those attending were: President Harold Burton, Leiters Ford, Indiana; First Vice President Dick Spears, Manchester, Tennessee; Second Vice President Robert C. Horton, Kenosha, Wisconsin; Executive Secretary Harry D. Gates, Jackson, Michigan; Directors: Neil Cousino, Erie, Michigan; Glendon Everett, Oak Harbor, Ohio; Karl Hawkins, New Orleans, Louisiana; James E. Keegan, Emmett, Michigan; Karl Moser, Crafordsville, Indiana; Linus Vanderloop, Kaukauna, Wisconsin; and Gerald Wick, Toivola, Minnesota.

The meeting site was selected so the members of the Board could view the Exporting facilities of the Port of New Orleans. Morris A. Clyde, Service Manager, Board of Commissioners of the Port of New Orleans, gave the group a very informative discussion of the Port Facilities. He pointed out that many commodities originate in Northern Mississippi River towns. Those commodities are loaded in containers which are loaded on barges and barged down the Mississippi to New Orleans. The containers or barges are then loaded on ships for foreign countries.

This discussion was especially interesting because of the theme of this year's Convention - "Hay - Export It." As many N.H.A. members are becoming interested in exporting hay discussion will be continued at the 1976 Convention to be held at the Holiday Inn North, Lafayette, Indiana, September 19-21. Lester H. Smith, Purdue University, Lafayette, Indiana, is working very closely with the Convention Committee. He is developing a live plant alfalfa display that will show various growth patterns of healthy and disease bearing plants.

For further information contact Harry D. Gates, Executive Secretary; The National Hay Association, Inc.; P. O. Box 1059; Jackson, Michigan 49204.

Ruminant digestion discussed at beef feeding seminar

What has four compartments and 130 feet of pipe? The answer is the digestive system of a 1,000 pound cow complete with four stomachs and 130 feet of intestinal tract.

The stomach of a cow may contain over 40 gallons of "digesta" - partially digested feed plus water - with 80 to 90 per cent of the contents in the rumen or first compartment.

These striking features of the digestive system of cattle and other cud-chewing (ruminant) animals were described recently during the Beef Cattle and Sheep Management Conferences held recently at The Pennsylvanis State University. The ruminant digestive system was called, "one of the most remarkable and intriguing phenomena in nature," by Dr. Paul J. Wangsness, associate professor of animal nutrition.

Dr. Wangsness said there are over 30 billion bacteria in one teaspoonful or rumen fluid. These bacteria and protozoa in the rumen fluid attack and digest feed particles as they are swallowed by the animal.

Such microbes function in two ways, he pointed out. First, they digest fiber to produce the all-important volatile fatty acids needed in the blood stream for energy. Second, the microbes supply the animal with much of the protein needed for growth and body building.

The "fermentation vat" of ruminant animals, he stated, includes the rumen and the reticulum - the first two stomach compartments where fiber is digested. Then the feed enters the omasum which acts to squeeze our water while pumping partially digested feed plus water into the fourth compartment, the abomasum.

Microorganisms (bacteria and protozoa) are quite particular about their "working conditions," Dr. Wangsness pointed out. If these conditions are not right, the organisms will not do their best job of digestion.

Correct rumen pH, a neutral condition between acidity and alkalinity, is vital for optimum microbial fermentation of feedstuffs and well-being of animals, he added.

A large amount of saliva flows into the rumen to aid in neutralizing acidity produced in fermentation. This can amount to 20 gallons of saliva per day containing about ¾ pounds of sodium bicarbonate. On low roughage diets, saliva production can be depressed, creating too much acidity in the rumen. When this occurs, the animal will "go off feed" and suffer from digestive upsets.

Good working conditions in the digestive system must also include the right nutrients for the microbes, Dr. Wangsness claimed. Correct amounts of energy, nitrogen (protein or non-protein nitrogen), vitamins, and minerals must be supplied for rumen microbes to survive and function efficiently. If too much non-protein nitrogen enters the rumen, microbes cannot use it fast enough and ammonia spill over into the blood stream. Excess spillage may produce urea toxicity.

As a further aid to digestion, the cud-chewing animal continuously regurgitates small wads of feed and rechews them. This aids greatly in breaking down roughages such as straw, hay, corn stalks, and even sawdust into smaller particles so microbes can attack and digest them more easily.

Wangsness and coworkers B. R. Baumgardt and L. F. Krabill are investigating different roughages - hays, silages, grasses, and legumes - as to their rate of rumen digestion to select forages best digested by microbes. "Big appetites" are essential, they claim, for top production from meat and milk-producing ruminants.

What's New

Any Rotation Crop Now May Follow Tolban Treatment

It's now okay to plant any crop in fall or spring rotation on a field treated once the previous spring with Tolban herbicide at recommended rates, according to the chemical's manufacturer, Ciba-Geigy Corp.

Restrictions were lifted recently by the Enviromental Protection Agency. EPA accepted the firm's research showing no danger of injury when rotating to wheat, other small grains, alfalfa, potatoes, or canning peas.

If crops fail in spring, Tolban-treated fields may be replanted immediately with any crop listed on the label.

The herbicide is registered for seedling alfalfa, cotton, dry beans, garbanzo peas, guar, mung beans, okra, safflower, snap beans, southern peas, soybeans, and sunflowers.

Auctioneer's Directory

Airline Hijackings

From June, 1970 through May, 1973, 24 commercial airline hijacking ransoms were payed. The average ransom amounted to more than $500,000. In most cases the airline companies from all over the world paid the ransom but later recovered the money when the hijacker was captured, killed, or surrendered. In only two cases was the ransom never recovered.

35 PURINA DAIRY CENTER HEIFERS

AVERAGE 12,884 LB. MILK
428 LB. BUTTERFAT IN THEIR FIRST LACTATION

Thirty-five first-calf Holstein heifers at the Purina Dairy Research Center completed lactations averaging 12,884 pounds of milk and 428 pounds of butterfat. The heifers compiled this record even though they were on a variety of nutritional experiments throughout the year.

Mature equivalents show that these heifers will be producing an average of 17,025 pounds of milk and 566 pounds of butterfat when mature!

PURINA DAIRY RESEARCH CENTER RESULTS
